<b>Inhaltsverzeichnis</b>	2
<b>Studiengangsbeschreibung</b>	4
<b>Fachmodule der Kernqualifikation</b>	5
Modul M0524: Nichttechnische Angebote im Master	5
Modul M1035: Entrepreneurial Finance	7
Modul M1599: Technology Management (GTIME)	10
Modul M1602: Product Planning (GTIME)	12
Modul M1601: Foundations of Corporate Management (GTIME)	14
Modul M1600: Mindfulness and Communication	16
Modul M1705: Shaping the world of tomorrow	18
Modul M1590: Project Seminar Innovation Marketing (GTIME)	19
Modul M1358: Global Innovation Management	21
Modul M1783: Legal Aspects of Technology Management	23
Modul M1034: Technology Entrepreneurship	24
Modul M1381: Agile Design Methods	27
Modul M1360: Sustainable Innovation Management	29
Modul M1782: Digital Transformation of the Innovation Value Chain	31
Modul M1784: Coding	32
Modul M0855: Marketing (Sales and Services / Innovation Marketing)	33
<b>Fachmodule der Vertiefung Entrepreneurial Business Engineering (AAU)</b>	35
Modul M1821: Semester Project incl. Executing Entrepreneurial Ideas (AAU)	35
Modul M1822: Management of Technological Innovation and Applied Business Modelling (AAU)	37
Modul M1823: Corporate Entrepreneurship, Management and Technology (AAU)	39
Modul M1824: Project Based Business Corporation I (AAU)	40
Modul M1825: Project Based Business Corporation II (AAU)	41
Modul M1826: Project Based Business Corporation III (AAU)	42
Modul M1827: Business Design and Sustainability (AAU)	43
Modul M1828: Business Design (AAU)	45
Modul M1829: Sustainability and Non-Market Strategy (AAU)	46
Modul M1830: Causal Data Science for Decision Making in Business (AAU)	48
Modul M1831: Responsible Business: Sustainability, Compliance and Control Issues (AAU)	50
Modul M1832: Entrepreneurial Finance (AAU)	52
Modul M1833: International Marketing (AAU)	54
Modul M1834: International Sales and Negotiations (AAU)	55
Modul M1835: Strategic Brand Management (AAU)	56
Modul M1836: Global Environmental Dynamics and Firms Responses (AAU)	57
Modul M1837: Internationalisation in Emerging Product and Geographic Markets (AAU)	58
Modul M1838: Internationalisation of Diverse Organisational Forms (AAU)	59
Modul M1839: Multinational Corporations and Innovation Ecosystems (AAU)	60
Modul M1840: New Venture Creation / Corporate Entrepreneurship (AAU)	61
Modul M1841: Commodity Economics (AAU)	62
<b>Fachmodule der Vertiefung Global Design Management (UoS)</b>	64
Modul M1386: Global Design (UoS)	64
Modul M1385: Design Management (UoS)	66
Modul M1387: Postgraduate Group Project (UoS)	67
<b>Fachmodule der Vertiefung Opportunities and Challenges for Innovation Management in New Economic Powerhouses (MU)</b>	68
Modul M1369: Business Modelling and System Dynamics (MU)	68
Modul M1372: Technology, Creativity and Innovation (MU)	69
Modul M1790: Communication Across Cultures (MU)	70
Modul M1791: Strategic Operations (MU)	71
Modul M1792: Organic Growth of Family-owned Business in India (MU)	72
Modul M1793: Understanding the Service Market in India (MU)	73
<b>Fachmodule der Vertiefung Technology and Innovation Management in Japan (APU)</b>	74
Modul M1355: Information Technology Management (APU)	74
Modul M1356: Technology Management (APU)	76
Modul M1357: Japanese Corporations and Asia Pacific (APU)	78
Modul M1359: National Innovation Systems (APU)	80
Modul M1361: Quality and Operations Management (APU)	81
Modul M1362: Major Seminar (APU)	82
Modul M1363: Project Management (APU)	83
Modul M1366: Management in Asia and Japan (APU)	84
Modul M1368: Management of Japanese Family Businesses (APU)	85
Modul M1367: Supply Chain Management (APU)	86
Modul M1364: Japanese I (APU)	87
<b>Fachmodule der Vertiefung Technology Venturing (KTU)</b>	88
Modul M1786: Strategic Management (KTU)	88
Modul M1787: Data Analysis Methods (KTU)	89
Modul M1788: Research Project (KTU)	90
Modul M1789: Communication and Negotiation (KTU)	91

Modul M1376: Business Models Innovation (KTU)	92
<b>Fachmodule der Vertiefung Wertorientierte Technologie Geschäftsentwicklung (TAU)</b>	<b>94</b>
Modul M1815: Analysing and Communicating Value (TAU)	94
Modul M1816: Managerial Finance for Sales and Sourcing (TAU)	98
Modul M1817: Basics of Industrial Management (TAU)	99
Modul M1819: Turning Technology into Business: Commercialization and Business Model Development (TAU)	101
Modul M1818: Turning Circular Economy Technologies into Business (TAU)	102
Modul M1820: Managing Operative Sales (TAU)	103
<b>Thesis</b>	<b>104</b>
Modul M-003: Masterarbeit	104

## Studiengangsbeschreibung

### Inhalt

Der englischsprachige Joint-Masterstudiengang **Global Technology and Innovation Management & Entrepreneurship (G-TIME)** ist ein zweijähriges Studium, das von einem internationalen Konsortium renommierter Hochschulen angeboten wird. Dem Konsortium gehören folgende Partner an: **Aalborg University** (Dänemark), **Kaunas University of Technology** (Litauen), **Manipal University** (Indien), **Ritsumeikan Asia Pacific University** (Japan), **Technische Universität Hamburg-Harburg** (Deutschland) und **University of Strathclyde** (Schottland). G-TIME-Studierende wechseln nach dem ersten gemeinsamen Studienjahr in Hamburg für das zweite Programmjahr eine der internationalen Partnerhochschulen.

Der MSc. Global Technology and Innovation Management & Entrepreneurship vermittelt Studierenden neuste Forschungs- und Lehrinhalte auf den Gebieten des Technologie- und Innovationsmanagements inklusive Themen der Unternehmensgründung, mittels derer Unternehmen egal welcher Größenordnung erfolgreich in einer globalisierten Weltwirtschaft bestehen können.

### Berufliche Perspektiven

G-TIME-Absolventen, unterstützt durch ein während des Studiums geknüpftes Netzwerk von Praxisvertretern sowie G-TIME-Alumni, bieten sich Berufseinstiegsmöglichkeiten in:

- Unternehmen jeder Größenordnung, welche das Ziel der Entwicklung innovativer Produkte und Dienstleistungen verfolgen
- Unternehmensberatungen unterschiedlichster Spezialisierung (u.a. Technologiebewertung oder Innovations- oder Change-Management)
- Staatlichen Institutionen, die sich mit Fragestellungen u.a. der Innovationspolitik, Cluster-Management oder Innovationsstrategieentwicklung beschäftigen
- Forschungseinrichtungen wie z.B. Technischen Universitäten

### Lernziele

Der MSc. Global Technology and Innovation Management & Entrepreneurship vermittelt Studierenden neuste Forschungs- und Lehrinhalte auf den Gebieten des Technologie- und Innovationsmanagements sowie der Unternehmensgründung, mittels derer Unternehmen egal welcher Größenordnung erfolgreich in einer globalisierten Weltwirtschaft bestehen können. G-TIME adressiert u.a. folgende Themen:

- Eine erweiterte Perspektive des Innovationsmanagements, die wichtige Felder wie z.B. Technologiemanagement, Unternehmensgründung, neuste Aspekte des F&E-Management, globales Designmanagement, Produkt- und Serviceplanung disziplinen- und themenübergreifend einbezieht.
- Die Einbindung neuester Ergebnisse aus den interdependenten Forschungsfeldern "Global Technology and Innovation Management & Entrepreneurship" der G-TIME-Partnerhochschulen.
- Fähigkeiten, die sowohl für große multinational tätige Konzerne wie auch für kleine und mittelständische Unternehmen inklusive Start-ups anwendbar und vorteilbringend sind.
- Eine praxisnahe Perspektive des Technologie- und Innovationsmanagements, die durch Industrieprojekte und "Problem Based Learning Elemente" vertieft wird.

### Studiengangsstruktur

Das Programm wird über 24 Monate als Vollzeitstudium durchgeführt. Es ist in 4 Semester untergliedert. Die ersten beiden Semester verbringen die Studierenden allesamt an der Technischen Universität Hamburg-Harburg (TUHH), bevor sie - entsprechend ihrer Interessen, das zweite Jahr an einer der internationalen Partnerhochschulen verbringen.

In den ersten beiden Semestern an der TUHH werden die Grundlagen des Technologie- und Innovationsmanagements in einem sich zunehmend globalisierenden Wettbewerbsfeld vermittelt. Dies erfolgt in enger Kooperation mit der Praxis. Gleicher gilt auch für den Bereich Existenzgründung, der durch Pflicht- sowie Wahlmodule angeboten wird.

Die Studieninhalte des dritten Semesters hängen von der Wahl der Partnerhochschule des zweiten Studienjahres ab. Entsprechend ihrer besonderen Fachausrichtungen bieten die internationalen Partnerinstitutionen Kurse an, welche die Inhalte des ersten Jahres komplementieren.

Im vierten Semester schreiben alle Studierenden ihre Masterarbeit.

## Fachmodule der Kernqualifikation

Der englischsprachige Joint-Masterstudiengang **Global Technology and Innovation Management & Entrepreneurship (G-TIME)** ist ein zweijähriges Studium, das von einem internationalen Konsortium renommierter Hochschulen angeboten wird. Dem Konsortium gehören folgende Partner an: **Aalborg University** (Dänemark), **Kaunas University of Technology** (Litauen), **Manipal University** (Indien), **Ritsumeikan Asia Pacific University** (Japan), **Technische Universität Hamburg-Harburg** (Deutschland) und **University of Strathclyde** (Schottland). G-TIME-Studierende wechseln nach dem ersten gemeinsamen Studienjahr in Hamburg für das zweite Programmjahr eine der internationalen Partnerhochschulen.

Der MSc. Global Technology and Innovation Management & Entrepreneurship vermittelt Studierenden neuste Forschungs- und Lehrinhalte auf den Gebieten des Technologie- und Innovationsmanagements inklusive Themen der Unternehmensgründung, mittels derer Unternehmen egal welcher Größenordnung erfolgreich in einer globalisierten Weltwirtschaft bestehen können.

### **Modul M0524: Nichttechnische Angebote im Master**

<b>Modulverantwortlicher</b>	Dagmar Richter
<b>Zulassungsvoraussetzungen</b>	Keine
<b>Empfohlene Vorkenntnisse</b>	Keine
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht
<b>Fachkompetenz</b>	<p><b>Wissen</b></p> <p><b>Die Nichttechnischen Angebote (NTA)</b></p> <p>vermittelt die in Hinblick auf das Ausbildungsprofil der TUHH nötigen Kompetenzen, die ingenieurwissenschaftliche Fachlehre fördern aber nicht abschließend behandeln kann: Eigenverantwortlichkeit, Selbstführung, Zusammenarbeit und fachliche wie personale Leistungsbefähigung der zukünftigen Ingenieurinnen und Ingenieure. Er setzt diese Ausbildungsziele in seiner <b>Lehrarchitektur</b>, den <b>Lehr-Lern-Arrangements</b>, den <b>Lehrbereichen</b> und durch Lehrangebote um, in denen sich Studierende wahlweise für <b>spezifische Kompetenzen</b> und ein <b>Kompetenzniveau</b> auf Bachelor- oder Masterebene qualifizieren können. Die Lehrangebote sind jeweils in einem Modulkatalog Nichttechnische Ergänzungskurse zusammengefasst.</p> <p><b>Die Lehrarchitektur</b></p> <p>besteht aus einem studiengangübergreifenden Pflichtstudienangebot. Durch dieses zentral konzipierte Lehrangebot wird die Profilierung der TUHH Ausbildung auch im nichttechnischen Bereich gewährleistet.</p> <p>Die Lernarchitektur erfordert und übt eigenverantwortliche Bildungsplanung in Hinblick auf den individuellen Kompetenzaufbau ein und stellt dazu Orientierungswissen zu thematischen Schwerpunkten von Veranstaltungen bereit.</p> <p>Das über den gesamten Studienverlauf begleitend studierbare Angebot kann ggf. in ein-zwei Semestern studiert werden. Angesichts der bekannten, individuellen Anpassungsprobleme beim Übergang von Schule zu Hochschule in den ersten Semestern und um individuell geplante Auslandsemester zu fördern, wird jedoch von einer Studienfixierung in konkreten Fachsemestern abgesehen.</p> <p><b>Die Lehr-Lern-Arrangements</b></p> <p>sehen für Studierende - nach B.Sc. und M.Sc. getrennt - ein semester- und fachübergreifendes voneinander Lernen vor. Der Umgang mit Interdisziplinarität und einer Vielfalt von Lernständen in Veranstaltungen wird eingeübt - und in spezifischen Veranstaltungen gezielt gefördert.</p> <p><b>Die Lehrbereiche</b></p> <p>basisieren auf Forschungsergebnissen aus den wissenschaftlichen Disziplinen Kulturwissenschaften, Gesellschaftswissenschaften, Kunst, Geschichtswissenschaften, Kommunikationswissenschaften, Migrationswissenschaften, Nachhaltigkeitsforschung und aus der Fachdidaktik der Ingenieurwissenschaften. Über alle Studiengänge hinweg besteht im Bachelorbereich zusätzlich ab Wintersemester 2014/15 das Angebot, gezielt Betriebswirtschaftliches und Gründungswissen aufzubauen. Das Lehrangebot wird durch soft skill und Fremdsprachkurse ergänzt. Hier werden insbesondere kommunikative Kompetenzen z.B. für Outgoing Engineers gezielt gefördert.</p> <p><b>Das Kompetenzniveau</b></p> <p>der Veranstaltungen in den Modulen der nichttechnischen Ergänzungskurse unterscheidet sich in Hinblick auf das zugrunde gelegte Ausbildungsziel: Diese Unterschiede spiegeln sich in den verwendeten Praxisbeispielen, in den - auf unterschiedliche berufliche Anwendungskontexte verweisende - Inhalten und im für M.Sc. stärker wissenschaftlich-theoretischen Abstraktionsniveau. Die Soft skills für Bachelor- und für Masterabsolventinnen/ Absolventen unterscheidet sich an Hand der im Berufsleben unterschiedlichen Positionen im Team und bei der Anleitung von Gruppen.</p> <p><b>Fachkompetenz (Wissen)</b></p> <p>Die Studierenden können</p> <ul style="list-style-type: none"> <li>• ausgewähltes Spezialgebiete des jeweiligen nichttechnischen Bereiches erläutern,</li> <li>• in den im Lehrbereich vertretenen Disziplinen grundlegende Theorien, Kategorien, Begrifflichkeiten, Modelle, Konzepte oder künstlerischen Techniken skizzieren,</li> <li>• diese fremden Fachdisziplinen systematisch auf die eigene Disziplin beziehen, d.h. sowohl abgrenzen als auch Anschlüsse benennen,</li> <li>• in Grundzügen skizzieren, inwiefern wissenschaftliche Disziplinen, Paradigmen, Modelle, Instrumente, Verfahrensweisen und Repräsentationsformen der Fachwissenschaften einer individuellen und soziokulturellen Interpretation und Historizität unterliegen,</li> <li>• können Gegenstandsangemessen in einer Fremdsprache kommunizieren (sofern dies der gewählte Schwerpunkt im NTW-</li> </ul>

	Bereich ist).
<b>Fertigkeiten</b>	Die Studierenden können in ausgewählten Teilbereichen <ul style="list-style-type: none"> <li>• grundlegende und teils auch spezielle Methoden der genannten Wissenschaftsdisziplinen anwenden.</li> <li>• technische Phänomene, Modelle, Theorien usw. aus der Perspektive einer anderen, oben erwähnten Fachdisziplin befragen.</li> <li>• einfache und teils auch fortgeschrittene Problemstellungen aus den behandelten Wissenschaftsdisziplinen erfolgreich bearbeiten,</li> <li>• bei praktischen Fragestellungen in Kontexten, die den technischen Sach- und Fachbezug übersteigen, ihre Entscheidungen zu Organisations- und Anwendungsformen der Technik begründen.</li> </ul>
<b>Personale Kompetenzen</b>	
<i>Sozialkompetenz</i>	Die Studierenden sind fähig , <ul style="list-style-type: none"> <li>• in unterschiedlichem Ausmaß kooperativ zu lernen</li> <li>• eigene Aufgabenstellungen in den o.g. Bereichen in adressatengerechter Weise in einer Partner- oder Gruppensituation zu präsentieren und zu analysieren,</li> <li>• nichttechnische Fragestellungen einer Zuhörerschaft mit technischem Hintergrund verständlich darzustellen</li> <li>• sich landessprachlich kompetent, kulturell angemessen und geschlechtersensibel auszudrücken (sofern dies der gewählte Schwerpunkt im NTW-Bereich ist)</li> </ul>
<i>Selbstständigkeit</i>	Die Studierenden sind in ausgewählten Bereichen in der Lage, <ul style="list-style-type: none"> <li>• die eigene Profession und Professionalität im Kontext der lebensweltlichen Anwendungsgebiete zu reflektieren,</li> <li>• sich selbst und die eigenen Lernprozesse zu organisieren,</li> <li>• Fragestellungen vor einem breiten Bildungshorizont zu reflektieren und verantwortlich zu entscheiden,</li> <li>• sich in Bezug auf ein nichttechnisches Sachthema mündlich oder schriftlich kompetent auszudrücken.</li> <li>• sich als unternehmerisches Subjekt zu organisieren, (sofern dies ein gewählter Schwerpunkt im NTW-Bereich ist).</li> </ul>
<b>Arbeitsaufwand in Stunden</b>	Abhängig von der Wahl der Lehrveranstaltungen
<b>Leistungspunkte</b>	6

**Lehrveranstaltungen**

**Die Informationen zu den Lehrveranstaltungen entnehmen Sie dem separat veröffentlichten Modulhandbuch des Moduls.**

Modul M1035: Entrepreneurial Finance				
Lehrveranstaltungen				
<b>Titel</b>		<b>Typ</b>	<b>SWS</b>	<b>LP</b>
Entrepreneurial Finance: Case Studies (L1282)		Seminar	3	4
Entrepreneurial Finance: Lecture (L1281)		Vorlesung	2	2
<b>Modulverantwortlicher</b>	Prof. Christoph Ihl			
<b>Zulassungsvoraussetzungen</b>	None			
<b>Empfohlene Vorkenntnisse</b>	Basic knowledge in business economics and finance obtained in the compulsory modules and participation in the module "Technology Entrepreneurship" is highly recommended.			
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht			
<b>Fachkompetenz</b>				
<i>Wissen</i>	Wissen (subject-related knowledge and understanding): <ul style="list-style-type: none"><li>• understand the structure of a financial plan for a new venture</li><li>• understand the procedures, pros and cons of different valuation methods</li><li>• understand the design of financial contracts and term sheets</li><li>• understand the interests of venture capital funds</li><li>• understand the pros and cons of different growth and exit options</li></ul>			
<i>Fertigkeiten</i>	Fertigkeiten (subject-related skills): <ul style="list-style-type: none"><li>• prepare a financial plan for a new venture</li><li>• value a new venture in financial terms</li><li>• apply different valuation methods</li><li>• evaluate the attractiveness of financial contracts</li><li>• design VC term sheets</li><li>• design employee contracts in terms of financial compensation</li><li>• design financial contracts and conduct financial negotiations</li><li>• assess and justify possible growth and exit options</li></ul>			
<b>Personale Kompetenzen</b>				
<i>Sozialkompetenz</i>	Sozialkompetenz (Social Competence): <ul style="list-style-type: none"><li>• team work</li><li>• communication and presentation</li><li>• give and take critical comments</li><li>• engaging in fruitful discussions</li></ul>			
<i>Selbstständigkeit</i>	Selbständigkeit (Autonomy): <ul style="list-style-type: none"><li>• autonomous work and time management</li><li>• project management</li><li>• analytical skills</li></ul>			
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 110, Präsenzstudium 70			
<b>Leistungspunkte</b>	6			
<b>Studienleistung</b>	Verpflichtend Bonus Ja	Art der Studienleistung 20 %	Beschreibung Gruppendiskussion	
<b>Prüfung</b>	Fachtheoretisch-fachpraktische Arbeit			
<b>Prüfungsdauer und -umfang</b>	Präsentationen und Fallstudienbearbeitung			
<b>Zuordnung zu folgenden Curricula</b>	Global Innovation Management: Kernqualifikation: Wahlpflicht Global Technology and Innovation Management & Entrepreneurship: Kernqualifikation: Wahlpflicht Internationales Wirtschaftsingenieurwesen: Vertiefung I. Management: Wahlpflicht Mechanical Engineering and Management: Vertiefung Management: Wahlpflicht			

Lehrveranstaltung L1282: Entrepreneurial Finance: Case Studies	
<b>Typ</b>	Seminar
<b>SWS</b>	3
<b>LP</b>	4
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 78, Präsenzstudium 42
<b>Dozenten</b>	Prof. Christoph Ihl
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	<p>Entrepreneurial finance is at the center of a clash of two very distant worlds: that of entrepreneurship and that of finance. Finance is disciplined, based on numbers and logical thinking and looking for proven track records. Entrepreneurship is messy, based on intuition and experimentation and treading off the beaten track. Entrepreneurial finance is the provision of funding to young, innovative, growth-oriented companies. Entrepreneurial companies are young, typically less than ten years old, and introduce innovative products or business models. The younger are called "startups," and are typically less than five years old.</p> <p>There is a variety of investors who can finance entrepreneurial companies: family and friends, business angels, accelerators and incubators, crowdfunding platforms, venture capital firms, corporate investors, etc. The course provides a thorough understanding of what motivates them, of the way they invest, and of what support they can provide to a company at what stage in the fundraising cycle. The course addresses the following key questions: How much money can and should be raised? When should it be raised and from whom? What is a reasonable valuation of the company? How should funding, employment contracts and exit decisions be structured?</p> <p>Thus, the course provides an understanding of the whole fundraising cycle, from the moment the entrepreneur conceived her idea to the moment investors exit the company and move on. We examine the entrepreneur's signalling to investors of the qualities of the venture, the investors' evaluation of the venture, the various dimensions of contracting (cash flow rights, control rights, compensation, and other clauses), the negotiation of a deal and the provision of corporate governance, the process of staged financing, the financing through debt, and the exit process through liquidity events such as initial public offering, sale or merger.</p> <p>The following topics will be covered with specific case studies:</p> <ol style="list-style-type: none"> <li>1. Introduction: Evaluating Venture Opportunities</li> <li>2. Financial Planning</li> <li>3. Ownership and Returns</li> <li>4. Valuation Methods</li> <li>5. Term Sheets</li> <li>6. Structuring Deals</li> <li>7. Corporate Governance</li> <li>8. Staged Financing</li> <li>9. Debt Financing</li> <li>10. Exits</li> <li>11. Early Stage &amp; Venture Capital Investors</li> <li>12. Ecosystems</li> </ol>

Lehrveranstaltung L2423: Technology Management (GTIME)	
<b>Typ</b>	Vorlesung
<b>SWS</b>	3
<b>LP</b>	3
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 48, Präsenzstudium 42
<b>Dozenten</b>	Prof. Cornelius Herstatt, Dr. Kamila Kunrath
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	The role of technology for the competitive advantage of the firm and industries; Basic concepts, models and tools for the management of technology; managerial decision making regarding the identification, selection and protection of technology (make or buy, keep or sell, current and future technologies). Theories, practical examples (cases), lectures, interactive sessions and group study.  This lecture is part of the Module Technology Management and can not be separately chosen.
<b>Literatur</b>	Leiblein, M./Ziedonis, A.: Technology Strategy and Innovation Management, Elgar Research Collection, Northhampton (MA) 2011

Lehrveranstaltung L2424: Technology Management Seminar (GTIME)	
<b>Typ</b>	Projekt-/problembasierte Lehrveranstaltung
<b>SWS</b>	2
<b>LP</b>	3
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 62, Präsenzstudium 28
<b>Dozenten</b>	Prof. Cornelius Herstatt, Dr. Kamila Kunrath
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	Beside the written exam at the end of the module, students have to give one presentation (RE) on a research paper and two presentations as part of a group discussion (GD) in the seminar in order to pass. With these presentations it is possible to gain a bonus of max. 20% for the exam. However, the bonus is only valid if the exam is passed without the bonus.

### Lehrveranstaltung L2417: Foundations of Business Management (GTIME)

<b>Typ</b>	Vorlesung
<b>SWS</b>	2
<b>LP</b>	2
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 32, Präsenzstudium 28
<b>Dozenten</b>	Dr. Stephan Buse
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	<p>In addition to the classical lecture approach, case study analyses and the implementation of a business simulation are used.</p> <p>This course teaches the relevant elements of strategic business management. It covers various areas of business administration (e.g. strategic management and aspects of marketing). Upon completion of the course, students should understand different perspectives on the topics and know in which situations which tools can be used and what the limitations of these models/concepts are. Students will be able to integrate future strategy and business model concepts into the taxonomy of approaches.</p> <p>The course thus provides an introduction to the most important principles and concepts necessary to understand how companies operate in today's business world. This includes the analysis of an extremely dynamic, increasingly globalizing competitive environment as well as the analysis of the required internal (core) competencies. It also aims to develop analytical skills that facilitate problem-solving and strategic decision-making activities in companies.</p> <p>In addition to the classical lecture approach, case study analyses and the execution of a business simulation are used.</p>

<b>Inhalt</b>	Mindfulness defines a situation, in which a person is mentally present without being distracted from thoughts or emotions. These are neither analyzed nor judged. Mindfulness is an important element of the Buddhist tradition and is taught through mindfulness-based stress reduction (MBSR)-trainings, Yoga, and meditation approaches in western culture. Until today, effects of mindfulness are tested and studied in medical and psychological clinical contexts. However, nowadays it is also part of the new work trend and enters the business context. During the seminar different mindfulness practices are presented, practiced and their effects on creativity, innovation, and entrepreneurship are discussed.

Lehrveranstaltung L2420: Intercultural Competencies	
<b>Typ</b>	Vorlesung
<b>SWS</b>	2
<b>LP</b>	2
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 32, Präsenzstudium 28
<b>Dozenten</b>	Dr. Stephan Buse, Prof. Rajnish Tiwari
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	<p>Globalization of business processes and the revolution in information and communication technologies (ICT) have resulted in distributed workflows across geographic boundaries. These developments as well as increased immigration emanating, for example, as a consequence of a shortage of skilled labour in many industrialized nations, have led to the creation of (virtual) multicultural, multi-ethnic teams with diverse cultural backgrounds. Such diversity generally has a positive impact on creativity and innovativeness, as many empirical studies confirm. Nevertheless, varying cultural practices, communication styles, and contextual sensibilities have the potential to disturb or even disrupt collaborative work processes, if left unmanaged.</p> <p>This course focuses on inter-cultural management from both, theoretical as well as practical, points of view to provide a solid fundament to students enabling them to operate successfully in cross-cultural settings. Case studies and guest lecture(s) will be used to provide added practical relevance to the course. In addition, where practicable, student assignments will be used to foster autonomous learning.</p> <p>Some of the main topics covered in this course include:</p> <ul style="list-style-type: none"> <li>• Understanding “culture” and its impact on human interaction</li> <li>• Verbal and non-verbal communication</li> <li>• High and low context communication</li> <li>• Role of formality and non-formality in communication</li> <li>• Varying interpretations of symbols, rituals &amp; gestures</li> <li>• Managing diversity in domestic settings</li> </ul>

<b>Inhalt</b>	<p>The purpose of this course is to equip students with important communication skills to successfully navigate the dynamic world of professionals dealing with innovation. Students will explore the field of communication by getting in touch with different communication models, like the Schramm model of communication. Successfully communicating complex ideas in a simple, yet engaging way is key to bring about change in organizations. Here, proficiency with tools like PowerPoint is crucial to create compelling visual support. Also, future change makers need to bring together perspectives in multidisciplinary and increasingly intercultural teams. Being able to give and receive feedback in a constructive way is equally important. Communication will be discussed in these different facets in an interactive format and a focus on practical application.</p>

<b>Dozenten</b>	Prof. Christian Lüthje, Amanda Baum
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	<p><b>General description of course content and course goals</b></p> <p>The aim of the course is to give students an insight into the practice of technology exploitation and innovation marketing. The technologies and product concepts are provided by so called idea providers. These idea providers may be, among others, researchers at universities and project teams working in research institutions with a technical invention or (prospective) entrepreneurs with a business idea.</p> <p>Within the course the student teams will analyze the market potential of technology-based inventions or business ideas. They will define potential target customers in the market. Another important question to answer is, whether the market is still receptive for a given invention, or whether competitors have already exploited the full market potential. Finally, the student teams will also develop first ideas for the design of the marketing mix and write a report that is also handed to the idea providers.</p> <p><b>Summarizing the most important contents</b></p>

	<p>The students will find answers to the following fundamental questions:</p> <ul style="list-style-type: none"> <li>• What are the key features of the invention?</li> <li>• What is the unique selling point?</li> <li>• What is the most attractive application field?</li> <li>• Who are the target customers?</li> <li>• What are their needs and how can they be met?</li> <li>• What is the market potential of innovations?</li> <li>• What resources are necessary to exploit this market potential?</li> <li>• How can/should they enter the market?</li> </ul>
	<p><b>Professional Competence</b></p>
	<p><b>Knowledge</b></p> <p>Students can...</p> <ul style="list-style-type: none"> <li>• understand the process and the tools of market analysis for innovations (e.g. market potential, market growth, market segmentation)</li> <li>• explain the concepts of target customers, market definition and market growth</li> <li>• select the appropriate approach for leading a competitive analysis</li> <li>• explain the key market-related issues (strengths and weaknesses) of technology-based business opportunities</li> </ul>
	<p><b>Skills</b></p> <p>Students are capable of...</p> <ul style="list-style-type: none"> <li>• analyzing the market potential of inventions and innovative business ideas by using appropriate methods.</li> <li>• investigating whether a market is still open for a given innovation and develop a first concept for the market entry strategy and the marketing mix.</li> <li>• searching for relevant information (primary and secondary market data).</li> <li>• analyzing, aggregating, and interpreting the gathered data and giving well founded recommendations based on the findings.</li> <li>• writing a scientific report that includes the literature background as well as the development of their methods, their results, conclusions and recommendations.</li> </ul>
	<p><b>Personal Competence</b></p> <p><b>Social Competence</b></p> <p>Students can...</p> <ul style="list-style-type: none"> <li>• provide appropriate feedback and handle feedback on their own performance constructively.</li> <li>• enter into a dialogue with formerly unknown fellow students, participate in discussions, and present well-grounded arguments.</li> <li>• constructively interact with their team members and lead team sessions and group work processes.</li> <li>• develop joint solutions and come to decisions in mixed teams and present the results to others.</li> </ul> <p><b>Self-Reliance</b></p> <p>Students are able to...</p> <ul style="list-style-type: none"> <li>• assess possible consequences of their own decisions.</li> <li>• define required tasks to find a solution for a given problem.</li> <li>• make elaborated decisions in a real-world innovation context.</li> <li>• assess their own performance in a team.</li> </ul>

Modul M1358: Global Innovation Management				
Lehrveranstaltungen				
<b>Titel</b>		<b>Typ</b>	<b>SWS</b>	<b>LP</b>
Management Globaler Innovationen - Seminar (L1934)		Seminar	2	3
Management Globaler Innovationen - Vorlesung (L1933)		Vorlesung	3	3
<b>Modulverantwortlicher</b>	Dr. Stephan Buse			
<b>Zulassungsvoraussetzungen</b>	None			
<b>Empfohlene Vorkenntnisse</b>	Basic knowledge of innovation management and globalisation			
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht			
<b>Fachkompetenz</b>				
<i>Wissen</i>	Students learn about economic theories and models that underlie innovation management in an increasingly globalized world. Particular attention is paid to emerging countries such as India and China, but also to other countries in Africa, Asia and South America, as they are becoming increasingly important as innovation locations and sales markets in global economic competition. The following theories/models will be dealt with in the modules/ sessions:			
	<ul style="list-style-type: none"> <li>• Lead Market Theory</li> <li>• Frugal Innovations</li> <li>• Open Innovation Approach</li> <li>• Transnational Model</li> <li>• Internationalisation of Research &amp; Development</li> </ul>			
<i>Fertigkeiten</i>	By means of the theories and models discussed, students are enabled to analyse the significance and effects of globalisation from an economic as well as a business perspective. Furthermore, they learn to assess the competitiveness of entrepreneurial innovation strategies and innovation locations.			
<b>Personale Kompetenzen</b>				
<i>Sozialkompetenz</i>	After successful completion of the module, students can work together purposefully and respectfully in (international) teams. In addition, they can conduct subject-specific discussions on issues of global innovation management and present and represent the results of their work in accordance with the requirements of the professional world.			
<i>Selbstständigkeit</i>	Upon successful completion of the module, students can conduct case studies on global innovation management issues independently and/or as part of a team. They are able to independently select and apply adequate analysis tools and to reflect their analysis results self-critically.			
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 110, Präsenzstudium 70			
<b>Leistungspunkte</b>	6			
<b>Studienleistung</b>	Keine			
<b>Prüfung</b>	Fachtheoretisch-fachpraktische Arbeit

<b>Modul M1034: Technology Entrepreneurship</b>				
<b>Lehrveranstaltungen</b>				
<b>Titel</b>		<b>Typ</b>	<b>SWS</b>	<b>LP</b>
Creation of Business Opportunities (L1280)		Projekt-/problembasierte Lehrveranstaltung	3	4
Entrepreneurship (L1279)		Vorlesung	2	2
<b>Modulverantwortlicher</b>	Prof. Christoph Ihl			
<b>Zulassungsvoraussetzungen</b>	None			
<b>Empfohlene Vorkenntnisse</b>	Basic knowledge in business economics obtained in the compulsory modules as well as an interest in new technologies and the pursuit of new business opportunities either in corporate or startup contexts.			
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht			
<b>Fachkompetenz</b>				
<i>Wissen</i>	<p>Wissen (subject-related knowledge and understanding):</p> <ul style="list-style-type: none"> <li>• develop a working knowledge and understanding of the entrepreneurial perspective</li> <li>• understand the difference between a good idea and scalable business opportunity</li> <li>• understand the process of taking a technology idea and finding a high-potential commercial opportunity</li> <li>• understand the components of business models</li> <li>• understand the components of business opportunity assessment and business plans</li> </ul>			
<i>Fertigkeiten</i>	<ul style="list-style-type: none"> <li>• Fertigkeiten (subject-related skills):</li> <li>◦ identify and define business opportunities</li> <li>◦ assess and validate entrepreneurial opportunities</li> <li>◦ create and verify a business model of how to sell and market an entrepreneurial opportunity</li> <li>◦ formulate and test business model assumptions and hypotheses</li> <li>◦ conduct customer and expert interviews regarding business opportunities</li> <li>◦ prepare business opportunity assessment</li> <li>◦ create and verify a plan for gathering resources such as talent and capital</li> <li>◦ pitch a business opportunity to your classmates and the teaching team</li> </ul>			
<b>Personale Kompetenzen</b>				
<i>Sozialkompetenz</i>	Sozialkompetenz (Social Competence):			
	<ul style="list-style-type: none"> <li>• team work</li> <li>• communication and presentation</li> <li>• give and take critical comments</li> <li>• engaging in fruitful discussions</li> </ul>			
<i>Selbstständigkeit</i>	Selbstständigkeit (Autonomy):			
	<ul style="list-style-type: none"> <li>• autonomous work and time management</li> <li>• project management</li> <li>• analytical skills</li> </ul>			
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 110, Präsenzstudium 70			
<b>Leistungspunkte</b>	6			
<b>Studienleistung</b>	Keine			
<b>Prüfung</b>	Fachtheoretisch-fachpraktische Arbeit			
<b>Prüfungsdauer und -umfang</b>	Drei Referate zum jeweiligen Projektstand			
<b>Zuordnung zu folgenden Curricula</b>	Global Technology and Innovation Management & Entrepreneurship: Kernqualifikation: Wahlpflicht Internationales Wirtschaftsingenieurwesen: Vertiefung I. Management: Wahlpflicht Logistik, Infrastruktur und Mobilität: Kernqualifikation: Wahlpflicht Mechanical Engineering and Management: Vertiefung Management: Wahlpflicht			

Lehrveranstaltung L1280: Creation of Business Opportunities	
<b>Typ</b>	Projekt-/problembasierte Lehrveranstaltung
<b>SWS</b>	3
<b>LP</b>	4
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 78, Präsenzstudium 42
<b>Dozenten</b>	Prof. Christoph Ihl, Dr. Hannes Lampe
<b>Sprachen</b>	EN
<b>Zeitraum</b>	SoSe
<b>Inhalt</b>	<p>Important note: This course is part of an 6 ECTS module consisting of two courses "Entrepreneurship" &amp; "Creation of Business Opportunities", which have to be taken together in one semester.</p> <p>Startups are temporary, team-based organizations, which can form both within and outside of established companies, to pursue one central objective: taking a new venture idea to market by designing a business model that can be scaled to a full-grown company. In this course, students will form startup teams around self-selected ideas and run through the process just like real startups would do in the first three months of intensive work. Startup Engineering takes an incremental and iterative approach, in that it favors variety and alternatives over one detailed, linear five-year business plan to reach steady state operations. From a problem solving and systems thinking perspective, student teams create different possible versions of a new venture and alternative hypotheses about value creation for customers and value capture vis-à-vis competitors. We will draw on recent scientific findings about international success factors of new venture design. To test critical hypotheses early on, student teams engage in scientific, evidence-based, experimental trial-and-error learning process that measures real progress.</p> <p>Upon completion of this course, students will be able to:</p> <ul style="list-style-type: none"> <li>· Apply a modern innovation toolkit relevant in both the corporate &amp; startup world</li> <li>· Analyze given business opportunities in terms of its constituent elements</li> <li>· Design new business models by gathering and combining relevant ideas, facts and information</li> <li>· Evaluate business opportunities and derive judgment about next steps &amp; decisions</li> </ul> <p>Course language is English, but participants can decide to give their graded presentations in German. Students are invited to apply to this course module already with a startup idea and/ or team, but this is not a requirement! We will form teams and ideas in the beginning of the course. Class meetings have alternate intervals of lecture inputs, teamwork, mentoring, and peer feedback. Attendance is mandatory for at least 80% of class time due to large proportion of teamwork sessions.</p> <p>Student teams give three presentations and submit them with backup analyses. Grading scheme:</p> <ul style="list-style-type: none"> <li>· Startup discovery presentation after 5 weeks: 30%</li> <li>· Startup validation presentation after 10 weeks: 30%</li> <li>· Final startup pitches after 13 weeks: 40%</li> </ul>
<b>Literatur</b>	<ul style="list-style-type: none"> <li>• Blank, S. &amp; Dorf, B. (2012). The startup owner's manual.</li> <li>• Gans, J. &amp; Stern, S. (2016). Entrepreneurial Strategy.</li> <li>• Osterwalder, A. &amp; Yves, P. (2010). Business model generation.</li> <li>• Maurya, A. (2012). Running lean: Iterate from plan A to a plan that works.</li> <li>• Maurya, A. (2016). Scaling lean: Mastering the Key Metrics for Startup Growth.</li> <li>• Wilcox, J. (2016). FOCUS Framework: How to Find Product-Market Fit.</li> </ul>

<b>Typ</b>	Projektseminar
<b>SWS</b>	3
<b>LP</b>	3
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 48, Präsenzstudium 42
<b>Dozenten</b>	Dr. Stephan Buse
<b>Sprachen</b>	EN
<b>Zeitraum</b>	SoSe
<b>Inhalt</b>	<p>The core of this projectseminar is the systematical and method - based development of individual design method skills. The course is divided into two sections:</p> <ol style="list-style-type: none"> <li>1.) theoretical input on relevant methodologies and</li> <li>2.) practical training and application of innovation methods.</li> </ol> <p>In the first events, basic knowledge and an overview of methodical approaches to innovation and creativity is given. In the subsequent groupwork phase, user needs are explored, solutions are developed and tested experimentally. Interim results are presented at regular intervals in the plenum. The ideas can be further developed from date to date on the basis of verified or falsified assumptions.</p> <p>Different design methodologies will be explained and set in context: Design Thinking, Scrum, Kanban, Simplicity, Appreciative Inquiry, Lean start-up, Business Model Canvas, Value Proposition Design. The didactical concept of the practice phase is problem-based learning. Therefore the methodological training will focus on design thinking applied to a real-world problem. In an iterative manner, the student teams go through all Design Thinking stages in a workshop style - starting from understand, to empathize, define, ideate, prototype and test, several times in projects.</p> <p>Agile design methods foster a new working paradigm, a mindset of collaboration. The students will experience the connection between methodology and working culture and reflect on their personal development on the one hand and the team dynamics on the other hand.</p>

<b>Inhalt</b>	<p>The course aims to equip students with an understanding of key issues in the management of innovation and an appreciation of the relevant skills needed to manage innovation at both strategic and operational levels. It provides evidence of different approaches based on leading research, real world examples and experiences of firms and organizations from around the world.</p> <p>The management of innovation is one of the most important and challenging aspects of modern organization. Innovation is a fundamental driver of competitiveness and it plays a large part in improving quality of life. Innovation, and particularly technological innovation, is inherently difficult, uncertain and risky, and most new technologies fail to be translated into successful products and services. Given this, it is essential that students understand the strategies, tools and techniques for managing innovation, which often requires a different set of management knowledge and skills from those employed in everyday business administration. The course itself draws upon research activities of the Institute for Technology and Innovation Management at the TUHH (<a href="http://www.tuhh.de/tim">www.tuhh.de/tim</a>)</p> <p>Lecture Topics:</p> <ul style="list-style-type: none"> <li>• The Management of (Technological) Innovation</li> <li>• Strategy and Organization for Innovation</li> <li>• Managing the Innovation Process</li> <li>• Innovation in the Age of Circular Economy (C2C)</li> <li>• Market-Research for Innovation and Design-thinking</li> <li>• Capturing value from R&amp;D, Open Innovation and IP</li> <li>• Creativity and mindfulness in Innovation</li> </ul>

<b>Inhalt</b>	The seminar "Management of Innovations" provides a practice-oriented application of the teaching material conveyed in the lecture "Management of Innovations". Students work in groups on selected topics of innovation management. Consequently, participation in the seminar requires participation in the lecture.

Lehrveranstaltung L0862: PBL Marketing of Innovations	
<b>Typ</b>	Projekt-/problembasierte Lehrveranstaltung
<b>SWS</b>	1
<b>LP</b>	2
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 46, Präsenzstudium 14
<b>Dozenten</b>	Prof. Christian Lüthje
<b>Sprachen</b>	EN
<b>Zeitraum</b>	SoSe
<b>Inhalt</b>	This PBL course is segregated into two afternoon sessions. This course aims at enhancing the students' practical skills in (1) forecasting the future development of markets and (2) making appropriate market-related decisions (particularly segmentation, managing the marketing mix). The students will be prompted to use the knowledge gathered in the lecture of this module and will be invited to (1) Conduct a scenario analysis for an innovative product category and (2) Engage in decision making within a market simulation game.

## Fachmodule der Vertiefung Entrepreneurial Business Engineering (AAU)

Geschäftsentwicklung durch Technologie, Innovation und Unternehmertum sind die Schlüsselkompetenzen der Zukunft in der globalen Geschäftswelt, sowohl in Start-up-Unternehmen, etablierten privaten Organisationen als auch in Wissens- und Dienstleistungsorganisationen des öffentlichen Sektors. Neue Wege zur Wertschöpfung zu finden, ist zunehmend eine Bedingung für private und öffentliche Organisationen.

In Entrepreneurial Engineering lernen Sie, wie Sie ein Unternehmen gründen, entwickeln und stärken können. Sie erhalten Einblicke in Methoden und Prozesse sowie in Organisations- und Managementprinzipien in Bezug auf Innovation und Unternehmertum in neuen und etablierten Unternehmen.

Sie erhalten Kenntnisse über:

Unternehmensgründung und -entwicklung

Im Kernfach des Studiengangs spezialisieren Sie sich auf Corporate Entrepreneurship und Gestaltungsprozesse, technologisches Innovationsmanagement und angewandte Geschäftsmodellierung, Finanzmanagement und Finanzierung für Unternehmer, Marketing und Projektmanagement. Darauf aufbauend können Sie in Semesterprojekten wählen, ob Sie sich auf die Gründung eines eigenen Unternehmens konzentrieren oder mit einem bereits etablierten Unternehmen zusammenarbeiten.

Durch problembasiertes Lernen entwickeln Sie Kompetenzen, um Lösungen für aktuelle und spezifische unternehmerische Herausforderungen sowohl einzeln als auch im Team zu identifizieren, zu analysieren und zu präsentieren. So bauen Sie ein Ausbildungsprofil auf, das Sie darauf vorbereitet, an komplexen Veränderungsprozessen mitzuwirken und neue Lösungen zu entwickeln.

Ideenfindung, -umsetzung und -entwicklung

Methoden, Prozesse und Prinzipien für Management und Organisationen, um Innovation und Unternehmertum zu verfolgen

<b>Inhalt</b>	<p>Both in an existing organisation and as an individual entrepreneur bringing innovative ideas into life requires planning, management, resources, competencies and environments conducive for taking the idea forward.</p> <p>This module provides an understanding of how to pursue opportunities but also on learning and practising this. The module adds an applied dimension to several entrepreneurship topics. While introducing a number of instruments for business planning the module also provides a critical perspective on business planning and on the rationale for promoting entrepreneurship. Moreover, the module introduces some of the most important framework conditions for university-based entrepreneurs. Finally, as 'There is nothing as practical as a good theory' we will also deal with some of the core theoretical issues in entrepreneurship.</p>

<b>Inhalt</b>	<p>Facing intense competition, companies find themselves competing under ever-changing conditions. Those changes force companies to rethink, reorganize and innovate their business offerings and processes as well as change their business model in order to remain competitive. Therefore, management of technological innovation and applied business modelling has become a key challenge for firms.</p> <p>The purpose of the module is to give the students an insight in technological innovation management and applied business modelling, both as a descriptive discipline for existing business, and an innovation discipline for new business. In doing so, this module addresses fundamental issues, and introduces new ideas and theoretical perspectives, both as a descriptive discipline for existing business, and an innovation discipline for new business. We will take a look at the foundations and dynamics of technological innovation and business modelling as well as the implications for firms.</p> <p>This objective includes helping students in attaining better understanding, skills, and competences regarding the role of technology, innovation and change in business as well as the challenges available in, and solutions offered through, organizational transition and change processes. Throughout the module it is emphasised how an organisation, and changes in an organisation, can be understood in relationship with the context of business model innovation as well as technological innovation management.</p> <p>In addition, the module will illustrate ways in which managers could deal with some of these technological innovation and business modelling challenges. Prominence attention is given for providing the students with frameworks and methods that are both theoretically sound and practically useful.</p>

<b>Inhalt</b>	In a rapidly changing world that we live in, it is utmost important for organisations to continuously develop new services, products, and business areas to survive and grow. In terms of creating changes through innovation and business development, established firms face challenges different from those that new firms face. In this module, we aim to understand the role and the processes of corporate entrepreneurship in established firms. We will also explore the external business context - local, national, global networks - that firms are a part of and interacting with, when pursuing innovation and business development. Furthermore, technological aspects of business development and innovation in established companies is explored both in product, process and business model innovation.  The module covers both theoretical and practical insights through lectures, discussions and case assignments.

<b>Inhalt</b>	<p>In this module the student will complete collaborative process with a Danish or foreign organisation. This allows students to gain a minimum of 240 hours of valuable work experience while studying. During the collaborative process, students will work on a specific project related to the master programme while working on identifying, exploring, analysing and reflecting on a master programme-related problem of their choice.</p> <p>The purpose of this module is to allow the student to acquire practical experience through working in an organisation with a specific project and bring their knowledge into play by trying out their theoretical and methodological competences in practice. The business cooperation will result in a written report, where the student explicates the knowledge, skills, and competencies acquired during the internship and combine it with contemporary knowledge acquired in the core modules of the master programme. A supervisor will be assigned to the student.</p>

<b>Inhalt</b>	<p>Business - particularly entrepreneurial start-ups working with innovative technologies - has a vital contribution to make to sustainable development. The idea is that entrepreneurial start-ups are a very powerful and agile innovation engine. And this potential for innovation can be used to turn sustainability challenges into opportunities for profits.</p> <p>However, and despite their critical importance, new sustainable technologies or even new scientific discoveries and ideas, by themselves, are not sufficient. Generally speaking, unregulated markets are quite inefficient in valuing environmental and social value creation. As a consequence, the rewards for addressing environmental or social problems with novel technologies or solutions are often ambiguous, a fact that makes it difficult to turn sustainable technologies and the products and services based on them in opportunities for profits.</p> <p>To be able to reach their full potential to contribute solving sustainability challenges, new technologies as well as the products and services developed on them, require to be brought to markets with appropriate business models, namely sustainable business models.</p> <p>Designing sustainable business models is not, in itself, easy. First of all it requires to become familiar with the main tools, the governing ideas, and the methods for the design of business. These include, among others, the iterative processes that entrepreneurs and innovators need to diligently manage uncertainty and proceed towards finding scalable and repeatable business models. It also involves understanding what are market-based barriers to sustainability and acquire the knowledge relative to how innovative business models design can support overcoming such barriers.</p> <p>Building on these premises, this elective module offers participants to learn how to systematically analyse risks and opportunities related to sustainable technologies, scientific discoveries and ideas that can solve social and environmental problems and how to design sustainable business models for them.</p>

<b>Inhalt</b>	Business design includes an introduction to classic business design concepts with specific focus on developing and implementing business models in existing companies across industries. The student will be introduced to organisational issues through the development and modification of business models and will work with innovation of business models in practice. The point of departure will be new contextual challenges for business design.  The development of business models is discussed in relation to existing business context, ecosystems and networks, with focus on the way in which business models develop across organisational boundaries and how this process is supported by collaboration and partnership.

<b>Inhalt</b>	<p>As the role of business becomes increasingly important in the fight against climate change, the module on Sustainability and Non-market Strategy aims to highlight the importance of sustainability in business.</p> <p>Students in this module will evaluate 1) the various drivers behind sustainability such as cost savings, growth opportunities, innovation, differentiation, and competitive advantage for motivations that can range from environmental to strategic; 2) how companies respond by integrating sustainability into their strategy, setting goals and standards, as well as different shades of green; and 3) when firms maximize social, environmental, and economic value from solving sustainability issues. Sustainability and Non-market Strategy thus refers to decisions regarding issues of Environment, Social, and Governance issues that firms face, and how firms respond to these challenges.</p> <p>This module should be of value for students interested in issues of sustainability, corporate social responsibility, leadership, and corporate strategy for a world adapting to climate change challenges. In order to achieve these goals, the module will cover topics such as UN Sustainable Development Goals, economics of climate change, CSR, greenwashing, leadership in sustainability, emerging technologies, corporate political activity, and role of government.</p> <p>The module aims to develop critical thinking skills that are useful to identify and analyse challenges and opportunities in sustainability, as well as become responsible leaders and effective agents of social change.</p> <p>The module will take a strategic approach to understanding sustainability, examine recent research to analyse critical, ethical, and managerial issues in issues of sustainability.</p>

<b>Inhalt</b>	<p>Managers today need to better understand cause and effect in organisations where data plays an important role in decision-making. While machine learning and AI tools can help with identifying relationships in data, such standard tools often do not detect cause and effect relationships in the data. This creates a shortcoming for managers and strategists where these algorithms may not allow to answer important questions in business analytics and decision making regarding "what is the effect of X on Y?" or "did X cause Y to change?". Many prominent firms such as Google, Uber, Zalando, McKinsey and Spotify are investing in their causal data science capabilities.</p> <p>This module will provide an introduction to the topic of causal inference with a focus on machine learning and AI based problems in business. In this module, students will conceptually learn how to apply causal inference for data and evidence driven decision making, at the intersection of data science and management strategy. Students will be exposed to various examples to apply concepts from causal analyses learnt in the module. The module will first introduce students to the world of causal inference, and cover standard tools that are used in empirical research, such as instrumental variables, regression discontinuity designs, difference-in-differences. The module will also include case studies that cover machine learning and AI based problems in business decisions.</p> <p>As the module will cover these topics conceptually, students do not need a particular background to take this class. However, some concepts such as conditional means, variances, hypothesis testing and regression will be covered at the beginning of the module. In-class lectures feature case studies and examples of causal inference research designs.</p>

<b>Inhalt</b>	<p>The purpose of this module is to shed light on the social responsibility, compliance, and accountability-control issues that arise in a global business setting. The subject matter is treated as a key for developing critical insight into the world-wide regulatory challenges faced by corporations in implementing environment, social and climate change related reporting obligations, imposed both at the domestic and international level. The module takes the question regarding the practical relevance of three topics - social responsibility, compliance and management control/accountability - in the global context.</p> <p>Firstly, it traces the theories regarding the types and interpretations of corporate social responsibility (CSR), and it illustrates the numerous ways of making sense of it, according to the diverse assumptions about its nature and characteristics. It explores how a range of global emerging social, environmental and political issues impact corporate governance, risk management and strategy policies related to sustainability. Subsequently, it covers the development of the concept of social responsibility and how this is implemented by organizations, what its impact is, and potential future developments.</p> <p>Secondly, the module examines the legal and moral compliance issues and challenges related to these issues are faced by organizations operating in global business contexts. The regulations, standards, and guidance directives that address issues such as environmental compliance, competition, anti-bribery, social responsibility, UN sustainable development goals, ethical leadership and climate change transparency will be considered in this part of the module.</p> <p>Thirdly, the module examines the management control implications. It looks at the definition and interpretation of management control/accountability and at what constitutes the ethic of accountability. In doing so it examines the way social actors (and, to a certain extent, organizations), can situate themselves as members of an ongoing community that affects, and is affected by them. The implications drawing from the interdependence between actors, gatekeepers (such as governments, auditors and regulators), and communities (e.g. the implementation of evaluation criteria, management control mechanisms required to meet relevant regulatory requirements) will be addressed in this part of the module.</p>

<b>Inhalt</b>	<p>The module will guide students through the complete life cycle of a start-up venture from launch to exit. It specifies different stages that a new company may go through as it grows, and outlines financial challenges confronting entrepreneurial ventures along the way. Students will receive answers to key questions: how much money can and should be raised, what is the optimal timing of obtaining financing, what is a reasonable valuation of the venture, how and where to obtain financing, how funding should be structured and how to position a new venture strategically. Students will be introduced to knowledge, theories and corporate finance tools that will help to recognise venture value, measure and evaluate financial performance.</p> <p>This module is designed for students who have a basic understanding of finance and familiar with the concepts such as time value of money, basic valuation principles, basic risk and return trade-off fundamentals, basics of evaluation of investment alternatives.</p> <p>During the module students will be introduced to approaches to valuing new venture or start-up equity from a venture capital (VC) perspective, will learn about various types of investors (venture capital, business angels, private equity, early stage and traditional financing sources) and financing of high-risk, high-growth ventures, the optimal timing in terms of obtaining funding and when to go public, exit and turnaround strategies, and the impact of digitalisation on entrepreneurial finance market. The module is essential for those wishing to understand the financial aspects of entrepreneurship and interested in gaining a broader view of the financial landscape and deal structure for new ventures, and for those considering starting a company and raising capital.</p>

<b>Inhalt</b>	Brands can be extremely valuable assets and a significant growth driver. This module will analyse how brands function as pivotal devices in today's society and the role of strategic brand management in customer value creation.  During this module the student will acquire insights into how companies should manage brands to maximize brand equity. This includes knowledge about the different brand management decisions that must be made to build, measure, and manage a brand. Furthermore, the objective of this module is to provide the student with insights into central theories and approaches related to strategic brand management, including theories on how customers develop brand attitudes and behaviours.

<b>Inhalt</b>	<p>The module explores the internationalisation in emerging product and geographic markets. International companies respond to external or internal opportunities and use their creative efforts to introduce new products and services. They, in turn, help capture and retain market share, increase profitability, and achieve competitive advantage in international markets.</p> <p>The module analyses the emergence of products and services, as well as servitization of solutions integrating design and technology. It also explores geographic emerging markets in Asia, Eastern Europe/Russia, Africa and Latin America. It brings cross-country differences in strategies across emerging markets, discusses the effects of internationalization on emerging markets and assesses risks and opportunities in emerging markets and transitional economies.</p>

<b>Inhalt</b>	<p>The module explores the internationalisation of various types of organisational forms such as NGOs, platform organisations, non-for-profit organisations, etc. These forms are not well researched in the International Business literature and offer new avenues for exploring the diversity in internationalisation.</p> <p>The module aims to address the phenomenon of such organisations, cover relevant theories, frameworks, and practices in understanding their internationalisation, their types and relations with established forms of multinational firms. The impact of such organisational forms on society, policy, technology, economy, commerce and the challenges in their international activities and legitimisation will be discussed.</p>

<b>Inhalt</b>	<p>This module discusses the emerging trends of value creation such as from do it alone to value co-creation with global partners, establishing cross-border strategic alliances and networks for joint innovation, participating and orchestrating innovation ecosystem for sustainable development, etc. Students will develop knowledge and reflect on issues such as, but not limited to, MNCs' global innovation modes and strategies, business and innovation ecosystems, digital platforms, business ecosystem in emerging markets, and interplay between value co-creation and value capture for sustainable development.</p> <p>During this module, we will start with reflecting more conventional theories and value creation modes such as global value chain and network theory, then will progress to more contemporary theories and topics such as ecosystem theory, competition theory, and the impact of digitalization. The module adopts digital tools and employs various pedagogical methods including lecturing, group discussions, peer review and peer learning, games and experiments, simulation, etc.</p>

<b>Inhalt</b>	<p>The objective of the module is to provide the student with theoretical and practical knowledge and abilities within financial control, trade and management of commodities as well as physical and financial exposures within the commodity market and, additionally, to relate to the ethics within the area.</p> <p>The student must develop abilities and skills to understand the market mechanisms in the commodity markets and handle the purchase and sale of commodities, theoretically and practically (simulated). The module is intended to provide the student with the strategic, financial and trading tools needed to handle both day-to-day management and risk management of commodities in practice.</p> <p>As part of this, the student will also get acquainted with the digital tools used to e.g. trade on the energy market, monitor fluctuation in the prices etc. in order to understand the technologies used in the domain, but also to inspire how these could be further developed and challenged.</p>

## **Fachmodule der Vertiefung Global Design Management (UoS)**

The Global Design Management specialisation taught during the second year of the GTIME programme in Glasgow focuses on enabling the systematic role of design in linking creativity to innovation throughout the product development process; from conceptualisation through production and delivery to the market place. The programme aims to develop graduates with management capability who can deploy well-coordinated global product development strategies, operations and projects towards innovation within contemporary industrial settings. Graduates will understand design in innovation as a rigorous engineering process through which innovation can be driven and realised in a competitive global economy, and as a human centred approach that can discover latent societal needs and problems and develop solutions that are sensitive to the needs of all stakeholders.

Different modules introduce the students to key concepts within complex innovative design processes and management approaches, management of globally distributed creative teams at partner universities and the Postgraduate Group Project places student teams to work with an industrial client on a real world solution to client's prioritised brief. Students may integrate and apply design, manufacturing and operations management knowledge and skills to an industry based product and process development project and further develop project management skills. The latter half of the second year at the University of Strathclyde is characterised by the Global Research Project as an individual research project for which the student develops a relevant study topic of interest then executes, documents and presents critical research findings.

These taught and project based modules are supplemented by 2 modules chosen by the students from an approved list of optional modules. These include human centred design, design aesthetics, design methods, sustainable design and remanufacturing, product costing and financial management, quality management and lean six sigma, technology and innovation management, systems thinking, supply chain management and enterprise resource planning.

## Fachmodule der Vertiefung Opportunities and Challenges for Innovation Management in New Economic Powerhouses (MU)

Manipal University is synonymous with excellence in higher education. Over 28,000 students from 57 different nations live, learn and play in the sprawling university town. The university has pioneered in every sector, engineering, management, communication and humanities and management, with all its institutes being mapped on the national and international radar. The School of Management, established in 1999, has been shaping professionally competent, socially responsible and ethical management postgraduates. The School draws its strength from its team of dedicated and experienced faculty members. Many of them have industry experience and have commendable record in research and research publication.

The second year of the GTIME program offered by the School, attempts to explore the rapidly changing business landscape in India. It attempts to provide students with a platform to explore this rich developing economy and trace its journey as it emerges into a strong economic power house. The third semester would commence with a one-week cultural immersion program that will sensitize students to the rich cultural heritage of India. This cultural program will also be a birds-eye view of the business culture operational in India. The courses offered in the third semester will provide students with insights into the business models operational in India and changing contours of the business environment. A potent, powerful blend pedagogy consisting of lectures, discussions, on-site visits and case studies will be employed. The project undertaken by the students in the fourth semester will enable them to obtain a hands one experience in an organization where he/she will be able to relate the class room discussions practically.

### Modul M1369: Business Modelling and System Dynamics (MU)

## Fachmodule der Vertiefung Technology and Innovation Management in Japan (APU)

Ritsumeikan University uses the second year of the GTIME program to introduce the students to innovation processes and management approaches used in Japan. Since the global success of Japanese companies, practitioners and scholars around the world have shown an increased interest in and appreciation for Japanese management principles and innovative practices. Japanese companies have for a long time adapted Western ideas of quality and innovation to the Japanese context and introduced new and innovative innovation processes and management techniques. Japan is still a leading driver in the migration toward global operations, integrating design, sourcing, manufacturing and distribution of products and services globally.

The second year in Japan adds to the global character of the master in innovation and technology management. Considering the renowned innovation process of the industry in Japan and the unique innovation processes used in Japan, it is a clear advantage to have focused course- and seminar modules about Japanese product and process innovation conducted in Japan. The students who choose Ritsumeikan University in Japan as their second year destination gain invaluable insights into the Japanese approach to innovation and the international competitiveness that arises from it.

Modul M1355: Information Technology Management (APU)				
<b>Lehrveranstaltungen</b>				
<b>Titel</b>		<b>Typ</b>	<b>SWS</b>	<b>LP</b>
Information Technology Management (APU) (L1930)		Vorlesung	4	4
<b>Modulverantwortlicher</b>	Prof. Yukihiko Nakata			
<b>Zulassungsvoraussetzungen</b>	None			
<b>Empfohlene Vorkenntnisse</b>	None			
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht			
<b>Fachkompetenz</b>	<p><i>Wissen</i>: Subject-related knowledge and understanding:</p> <ul style="list-style-type: none"> <li>• The value of IT to organizations.</li> <li>• The role of information technology for product and process development and the value of innovations.</li> <li>• Recognize and analyze the information-communication systems/services nexus.</li> <li>• Understand the principles necessary to overcome the management challenges of integrating IT in innovation and employing it in an organization.</li> <li>• Understanding how best practices can be implemented into the IT organization successfully.</li> </ul> <p><i>Fertigkeiten</i>: Subject-related skills:</p> <p>After completing this module, students will have skills in:</p> <ul style="list-style-type: none"> <li>• Determining what is to be contained in an IT Strategic Plan.</li> <li>• Integrating IT into product and service concept development</li> <li>• Coping with challenges of IT integration in product development and an organization</li> </ul>			
<b>Personale Kompetenzen</b>	<p><i>Sozialkompetenz</i>: Key Qualifications:</p> <p>After completing this module, students will have skills:</p> <ul style="list-style-type: none"> <li>• Identify the role of information for the success of innovation and competitiveness</li> <li>• Integration of information management in all stages of product development</li> <li>• Master total information technology management (ITM) in R&amp;D and business processes.</li> </ul>

<b>Inhalt</b>	<p>The aim of this course is to demonstrate and discuss the essential role of information technology for innovation and competitive advantage of a company. Innovations of the 21st century such as Apple's iPod - and the competitiveness advantage that results from it - are more and more based on information than on physical apparatus. Innovations are embedded in information networks and the value of a physical apparatus is based on how much information is processed or made available through the apparatus. In addition, information technologies are the core for management, manufacturing and service processes.</p> <p>In this sense Information Technology Management is important to accelerate innovations and strengthen competitiveness and, therefore, one of the key parts of Management of Technology (MOT), which is the management to lead R&amp;D to business and add extra value.</p> <p>The course objective is to master "Total Information Technology Management (ITM)". This concepts generally aim at leading R&amp;D and business processes to effectively utilize IT in order to strengthen competitiveness.</p> <p>The course is a complement to the courses "Strategy of Technology (SOT)" and "Management of Technological (MOT)".</p> <ul style="list-style-type: none"> <li>• Why "Information Technology Management"?</li> <li>• Paradigm Shift of IT Management <ul style="list-style-type: none"> <li>◦ IT in the 21st century</li> <li>◦ Smartphone, Big data etc.</li> </ul> </li> <li>• The Role of Information in innovation <ul style="list-style-type: none"> <li>◦ Case Study of iPod: Video Case Study</li> <li>◦ "The iPod Revolution"</li> </ul> </li> <li>• E-Business and E-Commerce <ul style="list-style-type: none"> <li>◦ E-business</li> <li>◦ Online Shopping Video Case Study</li> <li>◦ CEO exchange: Bezos of Amazon and Dyer of Land's End</li> </ul> </li> <li>• Transaction Processing, Functional Application and Integration Managing Production</li> <li>• Emerging IT Management</li> <li>• Knowledge Management: <ul style="list-style-type: none"> <li>◦ Requirements for Digitalization</li> <li>◦ IT systems for Knowledge Management</li> </ul> </li> <li>• Enterprise System for Total Supply Chain Management <ul style="list-style-type: none"> <li>◦ Supply Chain Enterprise Resource</li> <li>◦ Radio Frequency Identification (RFID)</li> <li>◦ Case Study of JR-Suica Video Case Study "Project X; Challenger IC Card System of JR-Suica"</li> </ul> </li> <li>• Build to Order <ul style="list-style-type: none"> <li>◦ Mass customization</li> <li>◦ Video Case Study; CEO exchange: Dell of Dell and Smith of FedEx</li> </ul> </li> <li>• Social Networking Service: Business Developing by IT</li> </ul>

<b>Modul M1357: Japanese Corporations and Asia Pacific (APU)</b>				
<b>Lehrveranstaltungen</b>				
<b>Titel</b>	Japanese Corporations and Asia Pacific (APU) (L1932)	<b>Typ</b>	SWS	LP
		Vorlesung	4	4
<b>Modulverantwortlicher</b>	Prof. Kaoru Natsuda			
<b>Zulassungsvoraussetzungen</b>	None			
<b>Empfohlene Vorkenntnisse</b>	Basic business knowledge.			
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht			
<b>Fachkompetenz</b>				
<i>Wissen</i>	The aim of this course is to provide knowledge of Japanese management systems and Japanese economy in relation to the Asia Pacific region. The contents of the course include Japanese domestic business and economic systems including human resource management, keiretsu, general trading companies, the role of the Japanese government in the economy, as well as the internationalization strategy (or regionalization) of Japanese corporations. We will particularly examine how Japanese multinational corporations have conducted foreign direct investment in the region in the historical perspective. In addition, the course requires the students' participation through a presentation: Investment Promotion - how to attract Japanese corporations into the country, which will be selected in the Asia Pacific region			
<i>Fertigkeiten</i>	By the end of the module students will have learned:  Completion of the course will assist students to establish a good working knowledge of Japanese business management, Japanese political economy as well as issues in the Asia Pacific. It will also assist students to develop research and presentation skills, which are required of anyone if they wish to put their analytical thinking capabilities into practice.  Subject-related knowledge and understanding: <ul style="list-style-type: none"><li>• Knowledge of Japanese management such as life time employment system, seniority system, enterprise unions, kaizen.</li><li>• Knowledge of Japanese political economy such as keiretsu system, developmental state concept, industrial policy.</li><li>• Knowledge of Japanese foreign direct investment in the Asia since 1950s until recent years.</li></ul> Knowledge of the Asia Pacific economy and international relations in Asia.

## Fachmodule der Vertiefung Technology Venturing (KTU)

Kaunas University of Technology (KTU) in Lithuania specialises in Technology Venturing during the second year of the GTIME program. Students will gain a broad understanding of the technology venturing process within different size projects and different industrial contexts. All studied topics are pulled together to develop 'right to win' business strategies that are sustainable and differentiated.

The modules at KTU are structured around the following topics: How to initiate technology venturing and develop business model for technology driven business? How to build a successful team for venturing and create a successful start-up? What are the differences between an idea and true opportunity and how to search for promising business opportunities? How to gather the resources necessary to create a great company and leverage venture capital? How to pitch business ideas to investors and manage stakeholder relations? How to assess business value and monitor business growth? What is entrepreneurial leadership in a large company? How to take advantage of doing business within the networks? How to manage corporate intellectual property in order stay competitive in the market? How can organizations fully exploit their potential and capture maximum value for growth and success?

The second-year modules in Kaunas are designed and executed by top academic researchers, and therefore are strongly research oriented. By introducing students to the state-of-the-art in academic research, the aim is to give them necessary tools to properly understand, evaluate and solve real-life cases, and to successfully conduct their final master degree project research.

The problem-based study approach adopted at KTU is intended to disclose a full variety of the problems related to technology venturing that arise in a wide range of different contexts, including: manufacturing, services, small to large organizations and the private and public sectors.

## Fachmodule der Vertiefung Wertorientierte Technologie Geschäftsentwicklung (TAU)

An der TAU haben die Studierenden die Möglichkeit, sich auf **Value-Driven Technology Business Development** zu spezialisieren. Das Lehrangebot dieser Spezialisierung integriert Technologiemanagement, Vertriebs- und Finanzmanagement sowie Wertschöpfung und Kommunikation und ergänzt die Lerninhalte des ersten Jahres des GTIME-Studiums.

Die an der TAU angebotenen Kurse haben Wertschöpfung, Wertquantifizierung, Wertkommunikation und Werterfassung als gemeinsame Faktoren. Sie werden ein solides Verständnis dafür vermitteln, wie Organisationen in verschiedenen Kontexten erfolgreich Werte schaffen, quantifizieren, kommunizieren und erfassen und wie man dieses Wissen in verschiedenen organisatorischen Kontexten kreativ anwendet.

### Modul M1815: Analysing and Communicating Value (TAU)

#### Lehrveranstaltung L3012: Analysing and Communicating Value (TAU)

<b>Typ</b>	Vorlesung
<b>SWS</b>	10
<b>LP</b>	10
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 160, Präsenzstudium 140
<b>Dozenten</b>	NN
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	<p>After this course, students should have a good starting point for working on their Master's Thesis rather independently - in terms of (1) understanding of different empirical data gathering methods, (2) conceptual thinking and (3) empirical research work and its documentation as well as (4) the structure, content and narrative of a thesis. Different managerial concepts, in the end, are tools for both researchers and managers alike to develop their thinking and understanding on complex issues. Students can solve managerial problems in different organizations with the help of the existing literature and are able to reflect the reality using the existing literature and concepts. The student understands how the active work in the field, in the spirit of interventionist research, can be a way to (1) get access to the organization, (2) become a team member, hence (3) providing access to more interesting research data. Naturally, each student will gain expertise in the content area of the paper.</p> <p>The following shows the learning objectives connected to grading:</p> <p>After completing this course (Final Grade 1), a student has some idea about the expectations Finnish work environment sets on young business development professionals. The company project is executed with minimal effort and brings no real value to the company. Nevertheless, the student understands the basic idea of constructing the objective and the narrative for an empirical research paper describing the research project and its key findings. The student is able to acquire, evaluate, compare and select information using research literature (and also understand the difference between peer-reviewed material and other sources) related to their empirical project work and research objective as well as provide a summary of the concepts applied in the case.</p> <p>After completing the course (Final Grade 2), a student knows how to push forward her/his own work, either in the case or writing (though the project management and action plans still mainly rely on the assistant/teacher). The student is able to construct a simple theoretical framework and apply the framework in an empirical project and resulting research paper. In addition, the student invests some effort in developing the company projects, although the results are not yet meaningful. The student writes simple yet understandable English and the paper has an identifiable narrative fulfilling the defined research objectives. The student is also aware of the data gathering methods used in qualitative management research and knows how to document the data gathering process. Similarly, the student is able to follow given instructions to push forward simple development tasks.</p> <p>After completing the course (Final Grade 3), the student is able to execute an empirical research project with the help of a supervisor; the student is able to actively seek help when needed and also follow the given instructions (with positive attitude),</p>

adding value on top of the advice given. The student is able to build a narrative for a research report with the help of the supervisor and apply the key theoretical concepts appropriately. The company project proceeds well and produces value to the company. The student is able to write simple yet rather flawless English following formatting instructions and reference practices as well as apply the basic tools needed for good cohesion. The student is able to link some empirical findings back to the research literature and the findings are visually connected to the framework built, hence complementing the framework deduced from the theory.

After completing the course (Final Grade 4), the student is able to manage her/his projects independently, seeking advice with good, well-structured questions when needed (with the course material and other evident sources consulted first). The student understands how the active, independent work with the case company makes the managers communicate actively with the student who is now clearly in the driver seat of the project. The student can identify development needs and structure the problem with a conceptual, visual representation as well as propose several potential solutions. The student has developed a habit to report systematically to the supervisors to keep them interested regarding the theoretical work going on. The student knows how to document the theoretical work in a way that feels natural and comfortable to her/himself. The student invests a good amount of effort into the company project, which results in some meaningful findings. The student understands how research interventions are used to 'tease out' theoretically-interesting questions/results with potential for a theory contribution and how to apply that knowledge when building an empirical research setting. The student is also to write professional English with a well-considered narrative, good cohesion, elegant formatting and smart referencing, including almost ready-for-press quality illustrations/visuals.

After completing the course (Final Grade 5), the student is able to execute an empirical research process independently and identify interesting theory contributions on her/his own, though the final argumentation and final visual representations may still need some advice from the supervisors. The student is able to keep both supervisors and company stakeholders interested in the work by good, systematic reporting, engaging the supervisors in the process in a positive way - even when the student needs help, the requests are well structured and the questions show the in-depth understanding of the context as well as the relevant literature. The student knows how to document the interventionist research process and how to show the chain of evidence regarding how the empirical case produced the key findings and the role the intervention played in the process. The student is able to identify findings with theory contribution and position them in the existing literature as well as argue the contribution potential. The student invests a lot of time and effort into the company project, proven by the amount of produced value. The student is able to write academic English in terms of narrative, cohesion, formatting and referencing plus the visuals.

After this course, students should have a good starting point for working on their Master's Thesis rather independently - in terms of (1) understanding of different empirical data gathering methods, (2) conceptual thinking and (3) empirical research work and its documentation as well as (4) the structure, content and narrative of a thesis. Different managerial concepts, in the end, are tools for both researchers and managers alike to develop their thinking and understanding on complex issues. Students can solve managerial problems in different organizations with the help of the existing literature and are able to reflect the reality using the existing literature and concepts. The student understands how the active work in the field, in the spirit of interventionist research, can be a way to (1) get access to the organization, (2) become a team member, hence (3) providing access to more interesting research data. Naturally, each student will gain expertise in the content area of the paper.

The following shows the learning objectives connected to grading:

After completing this course (Final Grade 1), a student has some idea about the expectations Finnish work environment sets on young business development professionals. The company project is executed with minimal effort and brings no real value to the company. Nevertheless, the student understands the basic idea of constructing the objective and the narrative for an empirical research paper describing the research project and its key findings. The student is able to acquire, evaluate, compare and select information using research literature (and also understand the difference between peer-reviewed material and other sources) related to their empirical project work and research objective as well as provide a summary of the concepts applied in the case.

After completing the course (Final Grade 2), a student knows how to push forward her/his own work, either in the case or writing (though the project management and action plans still mainly rely on the assistant/teacher). The student is able to construct a simple theoretical framework and apply the framework in an empirical project and resulting research paper. In addition, the student invests some effort in developing the company projects, although the results are not yet meaningful. The student writes simple yet understandable English and the paper has an identifiable narrative fulfilling the defined research objectives. The student is also aware of the data gathering methods used in qualitative management research and knows how to document the data gathering process. Similarly, the student is able to follow given instructions to push forward simple development tasks.

After completing the course (Final Grade 3), the student is able to execute an empirical research project with the help of a supervisor; the student is able to actively seek help when needed and also follow the given instructions (with positive attitude), adding value on top of the advice given. The student is able to build a narrative for a research report with the help of the supervisor and apply the key theoretical concepts appropriately. The company project proceeds well and produces value to the company. The student is able to write simple yet rather flawless English following formatting instructions and reference practices as well as apply the basic tools needed for good cohesion. The student is able to link some empirical findings back to the research literature and the findings are visually connected to the framework built, hence complementing the framework deduced from the theory.

After completing the course (Final Grade 4), the student is able to manage her/his projects independently, seeking advice with good, well-structured questions when needed (with the course material and other evident sources consulted first). The student understands how the active, independent work with the case company makes the managers communicate actively with the student who is now clearly in the driver seat of the project. The student can identify development needs and structure the problem with a conceptual, visual representation as well as propose several potential solutions. The student has developed a habit to report systematically to the supervisors to keep them interested regarding the theoretical work going on. The student knows how to document the theoretical work in a way that feels natural and comfortable to her/himself. The student invests a good amount of effort into the company project, which results in some meaningful findings. The student understands how research interventions are used to 'tease out' theoretically-interesting questions/results with potential for a theory contribution and how to apply that

Der Student hat sich angewöhnt, seinen Vorgesetzten</p>

systematisch Bericht zu erstatten, um deren Interesse an der theoretischen Arbeit aufrechtzuerhalten. Der/die Studierende weiß, wie er/sie die theoretische Arbeit in einer Weise dokumentiert, die ihm/ihr natürlich und angenehm erscheint. Der Student/die Studentin investiert ein gutes Maß an Anstrengung in das Unternehmensprojekt, was zu einigen aussagekräftigen Ergebnissen führt. Die/der Studierende versteht, wie Forschungsinterventionen eingesetzt werden, um theoretisch interessante Fragen/Ergebnisse mit Potenzial für einen Theoriebeitrag herauszuarbeiten, und wie man dieses Wissen beim Aufbau eines empirischen Forschungssettings anwendet. Der Student soll auch einen professionellen englischen Text mit einer gut durchdachten Erzählung, gutem Zusammenhalt, eleganter Formatierung und intelligenter Referenzierung schreiben, einschließlich fast druckreifer Illustrationen/Visualisierungen.

Modul M1816: Managerial Finance for Sales and Sourcing (TAU)				
Lehrveranstaltungen				
<b>Titel</b> Finanzmanagement für Vertrieb und Beschaffung (TAU) (L3013)		<b>Typ</b> Vorlesung	<b>SWS</b> 5	<b>LP</b> 5
<b>Modulverantwortlicher</b> NN				
<b>Zulassungsvoraussetzungen</b> None				
<b>Empfohlene Vorkenntnisse</b>				
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht			
<b>Fachkompetenz</b>				
<i>Wissen</i>				
<i>Fertigkeiten</i>				
<b>Personale Kompetenzen</b>				
<i>Sozialkompetenz</i>				
<i>Selbstständigkeit</i>				
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 80, Präsenzstudium 70

<b>Inhalt</b>	<p>In business organizations, people are increasingly managed with numbers. Thus, after passing the course (Final grade 1), students are familiar with the basic financial concepts and tools used in the industry and are able to use them in simple contexts. However, in the management field, these concepts and tools must be applied in order to provide the foundation for decision-making. With final grades 2 and 3, students are able to understand how such concepts and tools are used to support management decisions making.</p> <p>In today's knowledge economy, financial information not only is seen as a tool for managing people or organizations. Instead, it is increasingly seen as a source of innovation. Analyzing financial data may, for example, reveal that some customers are willing to pay more of the same product than others, hence helping the company to target its customers better. Understanding of value creation requires that companies are not only able to analyze their own costs but, instead, they also need to analyze the costs of their customers and sometimes even their customer's customers. Similarly, companies are looking for new performance measurement systems or compensation plans to guide the organization to do the right things in order to maximize the value creation and, eventually, outperform the competition. Students passing the course with final grade of 4 and 5 are able to understand the role financial information can play in such business development processes and how financial tools can be applied in innovative ways.</p>

<b>Inhalt</b>	This course sets the stage for management studies and provides a solid foundation for more advanced studies in industrial management. After the course, students understand how technology-driven, industrial-scale operations provide goods and services efficiently to the society while, at the same time, make profit for the owners. Understanding of value creation and its relationship to the success of business organisations forms the cornerstone of the course.  Core content  UNDERSTANDING 2B2 ENVIRONMENT  Customer value key to profitable business -supply and distribution networks -customer value -income statement and balance sheet -competitive advantage -contribution costing  FROM IDEA TO A PROFITABLE BUSINESS  Development of offering -product life cycle -competition -money flow in product development  Bookkeeping -principles of double-entry bookkeeping -closing and re-opening the books -inventory, receivables and payables  Marketing process -segmentation in B2B and B2C contexts -target market, differentiation and positioning

<b>Inhalt</b>	The students will understand strategies and issues in commercializing circular economy technologies and technological products and services. The students investigate the design, analysis and utilization of business models and commercialization process models. Different tools, such as canvases and models, are applied for bridging technological innovation to customer needs and potential markets (commercialization process models, Business Model Canvas, Value proposition canvas, Impact Canvas). Special emphasis will be devoted to how institutions and regulations shape the business potential of circular economy technologies. The lessons learnt will cover strategic decision-making and tactics related to managing, financing and marketing technologies, acknowledging the different paths of turning circular economy technologies into business.

Lehrveranstaltung L3014: Managing Operative Sales (TAU)	
<b>Typ</b>	Vorlesung
<b>SWS</b>	5
<b>LP</b>	5
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 80, Präsenzstudium 70
<b>Dozenten</b>	NN
<b>Sprachen</b>	EN
<b>Zeitraum</b>	WiSe
<b>Inhalt</b>	<p>The objective of the course is to understand the nature of operative sales in B2B markets and the key concepts used for business development in global B2B networks. After the course students understand the key characteristics of B2B markets and operative sales processes. Furthermore, students are familiar with the basic concepts and tools used in the planning, management and improvement of the operative sales processes in B2B context. Guest lecturers will be used to illustrate what development of B2B sales practices and processes mean in practice. In addition, the student papers used as course material will provide an opportunity for 'peer learning' since those papers have been written by first year master's students majoring in International Sales and Sourcing; the papers will illustrate how some 'peers with similar background' have applied business concepts and tools in their practical business development projects.</p> <p>To support business development in business networks, the course also includes elements of financial and management accounting, focusing on concepts relevant to sales professionals with the special emphasis on value creation and value capture. Thus, after the course students are able to apply contribution and full costing in simple pricing situations. The students also understand basic principles how business potential of a new offering or a new market can be quantified and are able to use that knowledge in the budgeting process. Finally, the students are able to apply financial key ratios to analyze income statement and balance sheet in order to evaluate and prioritize existing and potential customers.</p> <p>Selling technology-intensive products and services requires close collaboration with customers in order to help customers solve complex problems, making sales professionals almost consultants. To support that, the course also contains exercise on face-to-face sales negotiation to enable students to evaluate their current communication skills and potential areas of improvement. Thus, after the course students understand principles of good business interaction, are able to prepare and give a short 'pitch' focusing on essential elements from the customer's point of view and are aware of areas in business communication that still need improvement.</p>

## Thesis

<b>Modul M-003: Masterarbeit</b>				
<b>Lehrveranstaltungen</b>				
<b>Titel</b>		<b>Typ</b>	<b>SWS</b>	<b>LP</b>
<b>Modulverantwortlicher</b>	It. FSPO			
<b>Zulassungsvoraussetzungen</b>	<ul style="list-style-type: none"> <li>• Laut ASPO § 21 (1):</li> </ul> <p>Es müssen mindestens 60 Leistungspunkte im Studiengang erworben worden sein. Über Ausnahmen entscheidet der Prüfungsausschuss.</p>			
<b>Empfohlene Vorkenntnisse</b>	keine			
<b>Modulziele/ angestrebte Lernergebnisse</b>	Nach erfolgreicher Teilnahme haben die Studierenden die folgenden Lernergebnisse erreicht			
<b>Fachkompetenz</b> <i>Wissen</i>	<ul style="list-style-type: none"> <li>• Die Studierenden können das Spezialwissen (Fakten, Theorien und Methoden) ihres Studienfaches sicher zur Bearbeitung fachlicher Fragestellungen einsetzen.</li> <li>• Die Studierenden können in einem oder mehreren Spezialbereichen ihres Faches die relevanten Ansätze und Terminologien in der Tiefe erklären, aktuelle Entwicklungen beschreiben und kritisch Stellung beziehen.</li> <li>• Die Studierenden können eine eigene Forschungsaufgabe in ihrem Fachgebiet verorten, den Forschungsstand erheben und kritisch einschätzen.</li> </ul>			
<b>Fertigkeiten</b>	<ul style="list-style-type: none"> <li>• Die Studierenden sind in der Lage, für die jeweilige fachliche Problemstellung geeignete Methoden auszuwählen, anzuwenden und ggf. weiterzuentwickeln.</li> <li>• Die Studierenden sind in der Lage, im Studium erworbenes Wissen und erlernte Methoden auch auf komplexe und/oder unvollständig definierte Problemstellungen lösungsorientiert anzuwenden.</li> <li>• Die Studierenden können in ihrem Fachgebiet neue wissenschaftliche Erkenntnisse erarbeiten und diese kritisch beurteilen.</li> </ul>			
<b>Personale Kompetenzen</b> <i>Sozialkompetenz</i>	Studierende können			
	<ul style="list-style-type: none"> <li>• eine wissenschaftliche Fragestellung für ein Fachpublikum sowohl schriftlich als auch mündlich strukturiert, verständlich und sachlich richtig darstellen.</li> <li>• in einer Fachdiskussion Fragen fachkundig und zugleich adressatengerecht beantworten und dabei eigene Einschätzungen überzeugend vertreten.</li> </ul>			
<b>Selbstständigkeit</b>	Studierende sind fähig,			
	<ul style="list-style-type: none"> <li>• ein eigenes Projekt in Arbeitspakete zu strukturieren und abzuarbeiten.</li> <li>• sich in ein teilweise unbekanntes Arbeitsgebiet des Studiengangs vertieft einzuarbeiten und dafür benötigte Informationen zu erschließen.</li> <li>• Techniken des wissenschaftlichen Arbeitens umfassend in einer eigenen Forschungsarbeit anzuwenden.</li> </ul>			
<b>Arbeitsaufwand in Stunden</b>	Eigenstudium 900, Präsenzstudium 0			
<b>Leistungspunkte</b>	30			
<b>Studienleistung</b>	Keine
