Program description

Content

The MSc. in Global Technology and Innovation Management & Entrepreneurship (G-TIME) is a unique 2-year programme offered jointly by a consortium of internationally renowned universities. The consortium consists of following partners: Aalborg University (Denmark), Kaunas University of Technology (Lithuania), Manipal University (India), Ritsumeikan Asia Pacific University (Japan), Hamburg University of Technology (Germany) and University of Strathclyde (Scotland).

The MSc. G-TIME enables graduates of first degrees in engineering, science and technology to successfully manage the innovation process across international boundaries. Students have the opportunity to study at two different universities. The program starts off in Hamburg (Germany) where all students spend the first year (1st & 2nd semester) together. During the second year (3rd & 4th semester) students deepen their G-TIME knowledge at one of the international partner institutions.

Career prospects

Graduates, supported by a network of valuable contacts, enter the international employment market working:

- with enterprises dealing with high end technological products and services
- as consultants making technology assessment and innovation /change management
- with governmental institutes dealing with innovation policy and strategy
- with relevant research and higher education institutions

Learning target

The program equips students with skills to transform research outputs into innovative products and services. Learning the tools and techniques for working globally, students apply this knowledge practically by working on projects with industry contacts in different countries, further enhancing their understanding of international business. G-TIME addresses new challenges in innovative global enterprise and provides:

- A practical and global perspective of Innovation Management, through industry based modules
- Skills applicable for larger multinational organisations to smaller enterprises including start-ups
- Expanded perspectives of Innovation Management including Technology Management, R&D, and Product/Service Development with focus on the interface between disciplines involved in the process;
- Increased research capability focused on activities at the periphery of the innovation process.

Program structure

The programme is fulltime over 24 months and divided into 4 semesters of study. All students take a common first year at Hamburg University of Technology. Depending on their special interests they choose one of the international partner institutions for the second year.

Semesters 1 and 2 at Hamburg University of Technology provide a strong foundation in the field of Technology and Innovation Management. They look at early and late phases of the innovation management process. It concentrates on market research for (radical) innovation, cross functional cooperation at the front end of the innovation process, managing innovation projects over geographical and functional/divisional boarders and preparing the market introduction of new products and services. In addition, they provide a foundation in the field of Entrepreneurship.

The course content of semester 3 (year 2) depends on which partner institution is chosen. Based on their specific core competencies each partner offers courses which complement / deepen the study program of the first year.

In semester 4 all students undertake a thesis project at the institution where they spent the 3rd semester.

Core Qualification

The MSc. in Global Technology and Innovation Management & Entrepreneurship (G-TIME) is a unique 2-year programme offered jointly by a consortium of internationally renowned universities. The consortium consists of following partners: Aalborg University (Denmark), Kaunas University of Technology (Lithuania), Manipal University (India), Ritsumeikan Asia Pacific University (Japan), Hamburg University of Technology (Germany) and University of Strathclyde (Scotland).

The MSc. G-TIME enables graduates of first degrees in engineering, science and technology to successfully manage the innovation process across international boundaries. Students have the opportunity to study at two different universities. The program starts off in Hamburg (Germany) where all students spend the first year (1st & 2nd semester) together. During the second year (3rd & 4th semester) students deepen their G-TIME knowledge at one of the international partner institutions.

Content	In addition to the classical lecture approach, case study analyses and the implementation of a business simulation are used.	
	This course teaches the relevant elements of strategic business management. It covers various areas of business administration (e.g. strategic management and aspects of marketing). Upon completion of the course, students should understand different perspectives on the topics and know in which situations which tools can be used and what the limitations of these models/concepts are. Students will be able to integrate future strategy and business model concepts into the taxonomy of approaches. The course thus provides an introduction to the most important principles and concepts necessary to understand how companies operate in today's business world. This includes the analysis of an extremely dynamic, increasingly globalizing competitive environment as well as the analysis of the required internal (core) competencies. It also aims to develop analytical skills that facilitate problem-solving and strategic decision-making activities in companies. In addition to the classical lecture approach, case study analyses and the execution of a business simulation are used.

Knowledge	
-	After taking part successfully, students have reached the following learning results
rofessional Competence Knowledge	The Nontechnical Academic Programms (NTA)
, and medge	
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover to Self-reliance, self-management, collaboration and professional and personnel management competences. The departm implements these training objectives in its teaching architecture , in its teaching and learning arrangements , in teach areas and by means of teaching offerings in which students can qualify by opting for specific competences and a compete level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechn complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechn academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development competences. It also provides orientation knowledge in the form of "profiles".
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in on two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dea with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are delibera encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studi communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the wi semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start- in a goal-oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging g oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. Th differences are reflected in the practical examples used, in content topics that refer to different professional application conte and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leader functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	 explain specialized areas in context of the relevant non-technical disciplines, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in learning area, different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representa in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject.
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	 apply basic and specific methods of the said scientific disciplines, aquestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned speci discipline, to handle simple and advanced questions in aforementioned scientific disciplines in a sucsessful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond

Personal Competence	
Social Competence	Personal Competences (Social Skills)
	 Students will be able to learn to collaborate in different manner, to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	 to reflect on their own profession and professionalism in the context of real-life fields of application to organize themselves and their own learning processes to reflect and decide questions in front of a broad education background to communicate a nontechnical item in a competent way in writen form or verbaly to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses

Content	Mindfulness defines a situation, in which a person is mentally present without being distracted from thoughts or emotions. These are neither analyzed nor judged. Mindfulness is an important element of the Buddhist tradition and is taught through mindfulness- based stress reduction (MBSR)-trainings, Yoga, and meditation approaches in western culture. Until today, effects of mindfulness are tested and studied in medical and psychological clinical contexts. However, nowadays it is also part of the new work trend and enters the business context. During the seminar different mindfulness practices are presented, practiced and their effects on creativity, innovation, and entrepreneurship are discussed.

Content	Globalization of business processes and the revolution in information and communication technologies (ICT) have resulted in distributed workflows across geographic boundaries. These developments as well as increased immigration emanating, for example, as a consequence of a shortage of skilled labour in many industrialized nations, have led to the creation of (virtual) multi- cultural, multi-ethnic teams with diverse cultural backgrounds. Such diversity generally has a positive impact on creativity and innovativeness, as many empirical studies confirm. Nevertheless, varying cultural practices, communication styles, and contextual sensibilities have the potential to disturb or even disrupt collaborative work processes, if left unmanaged. This course focuses on inter-cultural management from both, theoretical as well as practical, points of view to provide a solid fundament to students enabling them to operate successfully in cross-cultural settings. Case studies and guest lecture(s) will be used to provide added practical relevance to the course. In addition, where practicable, student assignments will be used to foster autonomous learning. Some of the main topics covered in this course include: • Understanding "culture" and its impact on human interaction • Verbal and non-verbal communication • High and low context communication • Role of formality and non-formality in communication • Varying interpretations of symbols, rituals & gestures • Managing diversity in domestic settings

Content	The purpose of this course is to equip students with important communication skills to successfully navigate the dynamic world of professionals dealing with innovation. Students will explore the field of communication by getting in touch with different communication models, like the Schramm model of communication. Successfully communicating complex ideas in a simple, yet engaging way is key to bring about change in organizations. Here, proficiency with tools like PowerPoint is crucial to create compelling visual support. Also, future change makers need to bring together perspectives in multidisciplinary and increasingly intercultural teams. Being able to give and receive feedback in a constructive way is equally important. Communication will be discussed in these different facets in an interactive format and a focus on practical application.

Content	Students learn about economic theories and models that underlie innovation management in an increasingly globalized world. Particular attention is paid to emerging countries such as India and China, but also to other countries in Africa, Asia and South America, as they are becoming increasingly important as innovation locations and sales markets in global economic competition. In the problem-oriented course, the following theories/models will be dealt with: - Lead Market Theory - Frugal Innovations - Open Innovation Approach - Transnational Model - Internationalization of Research & Development By means of the theories and models discussed, students are enabled to analyse the significance and effects of globalisation from an economic as well as a business perspective. Furthermore, they learn to assess the competitiveness of entrepreneurial innovation strategies and innovation locations.

-	Entrepreneurial finance is at the center of a clash of two very distant worlds: that of entrepreneurship and that of finance. Finance is disciplined, based on numbers and logical thinking and looking for proven track records. Entrepreneurship is messy, based on intuition and experimentation and treading off the beaten track. Entrepreneurial finance is the provision of funding to young, innovative, growth-oriented companies. The younger are called "startups," and are typically less than ten years old, and introduce innovative products or business models. The younger are called "startups," and are typically less than five years old. There is a variety of investors who can finance entrepreneurial companies: family and friends, business angels, accelerators and incubators, crowdfunding platforms, venture capital firms, corporate investors, etc. The course provides a thorough understanding of what motivates them, of the way they invest, and of what support they can provide to a company at what stage in the fundraising cycle. The course addresses the following key questions: How much money can and should be naised? When should it be raised and from whom? What is a reasonable valuation of the company? How should funding, employment contracts and exit decisions be structured? Thus, the course provides an understanding of the whole fundraising cycle, from the moment the entrepreneur conceived her idea to the moment investors exit the company and move on. We examine the entrepreneur's signalling to investors of the qualities of the venture, the investors' evaluation of the venture, the various dimensions of corporate governance, the process of staged financing, the financing through debt, and the exit process though liquidity events such as initial public offering, sale or merger. The following topics will be covered with specific case studies: 1. Introduction: Evaluating Venture Opportunities 2. Financial Planning 3. Ownership and Returns 4. Valuation Methods 5. Term Sheets 6. Structuring Deals 7. Corporate Governance 8
	11. Early Stage & Venture Capital Investors12. Ecosystems

Content	General description of course content and course goals
	The aim of the course is to give students an insight into the practice of technology exploitation and innovation marketing. The technologies and product concepts are provided by so called idea providers. These idea providers may be, among others, researchers at universities and project teams working in research institutions with a technical invention or (prospective) entrepreneurs with a business idea. Within the course the student teams will analyze the market potential of technology-based inventions or business ideas. They will define potential target customers in the market. Another important question to answer is, whether the market is still receptive for a given invention, or whether competitors have already exploited the full market potential. Finally, the student teams will also develop first ideas for the design of the marketing mix and write a report that is also handed to the idea providers. Summarizing the most important contents

The students will find answers to the following fundamental questions:

- What are the key features of the invention?
- What is the unique selling point?
- What is the most attractive application field?
- Who are the target customers?
- What are their needs and how can they be met?
- What is the market potential of innovations?
- What resources are necessary to exploit this market potential?
- How can/should they enter the market?

Professional Competence

Knowledge

Students can...

- understand the process and the tools of market analysis for innovations (e.g. market potential, market growth, market segmentation)
- explain the concepts of target customers, market definition and market growth
- select the appropriate approach for leading a competitive analysis
- explain the key market-related issues (strengths and weaknesses) of technology-based business opportunities

Skills

Students are capable of...

- analyzing the market potential of inventions and innovative business ideas by using appropriate methods.
- investigating whether a market is still open for a given innovation and develop a first concept for the market entry strategy and the marketing mix.
- searching for relevant information (primary and secondary market data).
- analyzing, aggregating, and interpreting the gathered data and giving well founded recommendations based on the findings.
- writing a scientific report that includes the literature background as well as the development of their methods, their results, conclusions and recommendations.

Personal Competence

Social Competence

Students can...

- provide appropriate feedback and handle feedback on their own performance constructively.
- enter into a dialogue with formerly unknown fellow students, participate in discussions, and present well-grounded arguments.
- constructively interact with their team members and lead team sessions and group work processes.
- develop joint solutions and come to decisions in mixed teams and present the results to others.

Self-Reliance

 Students are able to...

 • assess possible consequences of their own decisions.

 • define required tasks to find a solution for a given problem.

 • make elaborated decisions in an real-world innovation context.

 • assess their own performance in a team.

Content	Important note: This course is part of an 6 ECTS module consisting of two courses "Entrepreneurship" & "Creation of Business Opportunities", which have to be taken together in one semester. Startups are temporary, team-based organizations, which can form both within and outside of established companies, to pursue
	one central objective: taking a new venture idea to market by designing a business model that can be scaled to a full-grown company. In this course, students will form startup teams around self-selected ideas and run through the process just like real startups would do in the first three months of intensive work. Startup Engineering takes an incremental and iterative approach, in that it favors variety and alternatives over one detailed, linear five-year business plan to reach steady state operations. From a problem solving and systems thinking perspective, student teams create different possible versions of a new venture and alternative hypotheses about value creation for customers and value capture vis-à-vis competitors. We will draw on recent scientific findings about international success factors of new venture design. To test critical hypotheses early on, student teams engage in scientific, evidence-based, experimental trial-and-error learning process that measures real progress. Upon completion of this course, students will be able to: • Apply a modern innovation toolkit relevant in both the corporate & startup world • Analyze given business opportunities in terms of its constituent elements • Design new business opportunities and derive judgment about next steps & decisions Course language is English, but participants can decide to give their graded presentations in German. Students are invited to apply to this course module already with a startup idea and/ or team, but this is not a requirement! We will form teams and ideas in the beginning of the course. Class meetings have alternate intervals of lecture inputs, teamwork, mentoring, and peer feedback. Attendance is mandatory for at least 80% of class time due to large proportion of teamwork sessions. Student teams give three presentation after 10 weeks: 30% • Startup discovery presentation after 10 weeks: 30% • Final startup pitches after 13 weeks: 40%

Students are invited to apply to this course module already with a startup idea and/ or team, but this is not a requirement! We will form teams and ideas in the beginning of the course. Class meetings have alternate intervals of lecture inputs, teamwork, mentoring, and peer feedback. Attendance is mandatory for at least 80% of class time due to large proportion of teamwork sessions. Student teams give three presentation after 5 weeks: 30% · Startup validation presentation after 10 weeks: 30% · Final startup pitch

Content	The core of this projectseminar is the systematical and method - based development of individual design method skills. The course is divided into two sections:	
	1.) theoretical input on relevant methodologies and	
	2.) practical training and application of innovation methods.	
	In the first events, basic knowledge and an overview of methodical approaches to innovation and creativity is given. In the subsequent groupwork phase, user needs are explored, solutions are developed and tested experimentally. Interim results are presented at regular intervals in the plenum. The ideas can be further developed from date to date on the basis of verified or falsified assumptions.	
	Different design methodologies will be explained and set in context: Design Thinking, Scrum, Kanban, Simplicity, Appreciative Inquiry, Lean start-up, Business Model Canvas, Value Proposition Design. The didactical concept of the practice phase is problem- based learning. Therefore the methodological training will focus on design thinking applied to a real-world problem. In an iterative manner, the student teams go through all Design Thinking stages in a workshop style - starting from understand, to empathize define, ideate, prototype and test, several times in projects.	
	Agile design methods forster a new working paradim, a mindset of collaboration. The students will experience the connection between methodology and working culture and reflect on their personal develpoment on the one hand and the team dynamics on the other hand.

Content	The course aims to equip students with an understanding of key issues in the management of innovation and an appreciation of the relevant skills needed to manage innovation at both strategic and operational levels. It provides evidence of different approaches based on leading research, real world examples and experiences of firms and organizations from around the world. The management of innovation is one of the most important and challenging aspects of modern organization. Innovation is a fundamental driver of competitiveness and it plays a large part in improving quality of life. Innovation, and particularly technological innovation, is inherently difficult, uncertain and risky, and most new technologies fail to be translated into successful products and services. Given this, it is essential that students understand the strategies, tools and techniques for managing innovation, which often requires a different set of management knowledge and skills from those employed in everyday business administration. The course itself draws upon research activities of the Institute for Technology and Innovation Management at the TUHH (www.tuhh.de/tim) Lecture Topics: • The Management of (Technological) Innovation • Strategy and Organization for Innovation • Managing the Innovation Process • Innovation in the Age of Circular Economy (C2C) • Market-Research for Innovation and Design-thinking • Capturing value from R&D, Open Innovation and IP • Creativity and mindfulness in Innovation

Knowledge	 Module International Business Basic understanding of business administration principles (strategic planning, decision theory, project management
	international business)
	 Bachelor-level Marketing Knowledge (Marketing Instruments, Market and Competitor Strategies, Basics of Buying Behavio
	Unerstanding the differences beweetn B2B and B2C marketing
	 Understanding of the importance of managing innovation in global industrial markets
	Good English proficiency; presentation skills
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	After taking part successfully, statents have reached the following learning results
Knowledge	Students will have gained a deep understanding of
	Specific characteristics in the marketing of innovative poroducts and services
	Approaches for analyzing the current market situation and the future market development The apthesing of information about future suctamor needs and requirements
	 The gathering of information about future customer needs and requirements Concepts and approaches to integrate lead users and their needs into product and service development processes
	 Approaches and tools for ensuring customer-orientation in the development of new products and innovative services
	Marketing mix elements that take into consideration the specific requirements and challenges of innovative products
	services
	Pricing methods for new products and services
	The organization of complex sales forces and personal selling
	Communication concepts and instruments for new products and services
Skills	Based on the acquired knowledge students will be able to:
	 Design and to evaluate decisions regarding marketing and innovation strategies
	 Analyze markets by applying market and technology portfolios
	Conduct forecasts and develop compelling scenarios as a basis for strategic planning
	Translate customer needs into concepts, prototypes and marketable offers and successfully apply advanced methods successfully apply advanced methods
	 customer-oriented product and service development Use adequate methods to foster efficient diffusion of innovative products and services
	Choose suitable pricing strategies and communication activities for innovations
	 Make strategic sales decisions for products and services (i.e. selection of sales channels)
	Apply methods of sales force management (i.e. customer value analysis)
Personal Competence	
	The students will be able to
	have fruitful discussions and exchange arguments
	 develop original results in a group present results in a clear and concise way
	carry out respectful team work
Autonomy	The students will be able to
	Acquire knowledge independently in the specific context and to map this knowledge on other new complex problem field:
	 Consider proposed business actions in the field of marketing and reflect on them.

Specialization Entrepreneurial Business Engineering (AAU)

Business development through technology, innovation and entrepreneurship are the key competencies of the future in the global business arena, both in start-up companies, established private organisations and the public sector knowledge and service organisations. Finding new ways to create value is increasingly a condition for both private and public organisations.

Entrepreneurial Enginnering will teach you how to create, develop, and strengthen a business. You gain insight into methods and processes as well as organisational and management principles in relation to innovation and entrepreneurship in both new and established companies.

Get knowledge of:

- Idea generation, realization, and development
- Methods, processes, and principles for management and organisations to pursue innovation and entrepreneurship
- Business creation and development

Through the core subject of the programme, you specialise in corporate entrepreneurship and design processes, technological innovation management and applied business modeling, financial management and financing for entrepreneurs, marketing, and project management. Based on this, you can in semester projects choose to focus on either starting your own company or work with an already established company.

Through problem-based learning, you develop competencies to identify, analyse and present solutions to current and specific business challenges both individually and in teams. In this way, you build an educational profile that prepares you to take part in complex change processes and develop new solutions.

Content	Both in an existing organisation and as an individual entrepreneur bringing innovative ideas into life requires planning, management, resources, competencies and environments conducive for taking the idea forward. This module provides an understanding of how to pursue opportunities but also on learning and practising this. The module adds an applied dimension to several entrepreneurship topics. While introducing a number of instruments for business planning the module also provides a critical perspective on business planning and on the rationale for promoting entrepreneurship. Moreover, the module introduces some of the most important framework conditions for university-based entrepreneurs. Finally, as 'There is nothing as practical as a good theory' we will also deal with some of the core theoretical issues in entrepreneurship.

Content	Facing intense competition, companies find themselves competing under ever-changing conditions. Those changes force companies to rethink, reorganize and innovate their business offerings and processes as well as change their business model in order to remain competitive. Therefore, management of technological innovation and applied business modelling has become a key challenge for firms. The purpose of the module is to give the students an insight in technological innovation management and applied business modelling, both as a descriptive discipline for existing business, and an innovation discipline for new business. In doing so, this module addresses fundamental issues, and introduces new ideas and theoretical perspectives, both as a descriptive discipline for new business. We will take a look at the foundations and dynamics of technological innovation and business modelling as well as the implications for firms. This objective includes helping students in attaining better understanding, skills, and competences regarding the role of technology, innovation and change in business as well as the challenges available in, and solutions offered though, organizational transition and change processes. Throughout the module it is emphasised how an organisation, and changes in an organisation, can be understood in relationship with the context of business model innovation as well as technological innovation management. In addition, the module will illustrate ways in which managers could deal with some of these technological innovation and business modelling challenges. Prominence attention is given for providing the students with frameworks and methods that are both theoretically sound and practically useful.

Content	In a rapidly changing world that we live in, it is utmost important for organisations to continuously develop new services, products, and business areas to survive and grow. In terms of creating changes through innovation and business development, established firms face challenges different from those that new firms face. In this module, we aim to understand the role and the processes of corporate entrepreneurship in established firms. We will also explore the external business context - local, national, global networks - that firms are a part of and interacting with, when pursuing innovation and business development. Furthermore, technological aspects of business development and innovation in established companies is explored both in product, process and business model innovation. The module covers both theoretical and practical insights through lectures, discussions and case assignments.

Content	In this module the student will complete collaborative process with a Danish or foreign organisation. This allows students to gain a minimum of 240 hours of valuable work experience while studying. During the collaborative process, students will work on a specific project related to the master programme while working on identifying, exploring, analysing and reflecting on a master programme-related problem of their choice. The purpose of this module is to allow the student to acquire practical experience through working in an organisation with a specific project and bring their knowledge into play by trying out their theoretical and methodological competences in practice. The business cooperation will result in a written report, where the student explicates the knowledge, skills, and competencies acquired during the internship and combine it with contemporary knowledge acquired in the core modules of the master programme. A supervisor will be assigned to the student.

Content	In this module the student will complete collaborative process with a Danish or foreign organisation. This allows students to gain a minimum of 240 hours of valuable work experience while studying. During the collaborative process, students will work on a specific project related to the master programme while working on identifying, exploring, analysing and reflecting on a master programme-related problem of their choice. The purpose of this module is to allow the student to acquire practical experience through working in an organisation with a specific project and bring their knowledge into play by trying out their theoretical and methodological competences in practice. The business cooperation will result in a written report, where the student explicates the knowledge, skills, and competencies acquired during the internship and combine it with contemporary knowledge acquired in the core modules of the master programme. A supervisor will be assigned to the student.

Content	Business - particularly entrepreneurial start-ups working with innovative technologies - has a vital contribution to make to sustainable development. The idea is that entrepreneurial start-ups are a very powerful and agile innovation engine. And this potential for innovation can be used to turn sustainability challenges into opportunities for profits. However, and despite their critical importance, new sustainable technologies or even new scientific discoveries and ideas, by themselves, are not sufficient. Generally speaking, unregulated markets are quite inefficient in valuing environmental and social value creation. As a consequence, the rewards for addressing environmental or social problems with novel technologies or solutions are often ambiguous, a fact that makes it difficult to turn sustainabile technologies and the products and services based on them in opportunities for profits. To be able to reach their full potential to contribute solving sustainability challenges, new technologies as well as the as the products and services developed on them, require to be brought to markets with appropriate business models, namely sustainable business models. Designing sustainable business models is not, in itself, easy. First of all it requires to become familiar with the main tools, the governing ideas, and the methods for the design of business. These include, among others, the iterative processes that entrepreneurs and innovators need to diligently manage uncertainty and proceed towards finding scalable and repeatable business models. It also involves understanding what are market-based barriers to sustainability and acquire the knowledge relative to how innovative business models design can support overcoming such barriers. Building on these premises, this elective module offers participants to learn how to systematically analyse risks and opportunities
	related to sustainable technologies, scientific discoveries and ideas that can solve social and environmental problems and how to design sustainable business models for them.

Content	Business design includes an introduction to classic business design concepts with specific focus on developing and implementing business models in existing companies across industries. The student will be introduced to organisational issues through the development and modification of business models and will work with innovation of business models in practice. The point of departure will be new contextual challenges for business design. The development of business models is discussed in relation to existing business context, ecosystems and networks, with focus on the way in which business models develop across organisational boundaries and how this process is supported by collaboration and partnership.

Content	As the role of business becomes increasingly important in the fight against climate change, the module on Sustainability and Non- market Strategy aims to highlight the importance of sustainability in business.
	Students in this module will evaluate 1) the various drivers behind sustainability such as cost savings, growth opportunities, innovation, differentiation, and competitive advantage for motivations that can range from environmental to strategic; 2) how companies respond by integrating sustainability into their strategy, setting goals and standards, as well as different shades of green; and 3) when firms maximize social, environmental, and economic value from solving sustainability issues. Sustainability and Non-market Strategy thus refers to decisions regarding issues of Environment, Social, and Governance issues that firms face, and how firms respond to these challenges.
	This module should be of value for students interested in issues of sustainability, corporate social responsibility, leadership, and corporate strategy for a world adapting to climate change challenges. In order to achieve these goals, the module will cover topics such as UN Sustainable Development Goals, economics of climate change, CSR, greenwashing, leadership in sustainability, emerging technologies, corporate political activity, and role of government.
	The module aims to develop critical thinking skills that are useful to identify and analyse challenges and opportunities in sustainability, as well as become responsible leaders and effective agents of social change.
	The module will take a strategic approach to understanding sustainability, examine recent research to analyse critical, ethical, and managerial issues in issues of sustainability.

	Managers today need to better understand cause and effect in organisations where data plays an important role in decision- making. While machine learning and AI tools can help with identifying relationships in data, such standard tools often do not detect cause and effect relationships in the data. This creates a shortcoming for managers and strategists where these algorithms may not allow to answer important questions in business analytics and decision making regarding "what is the effect of X on Y?" or "did X cause Y to change?". Many prominent firms such as Google, Uber, Zalando, McKinsey and Spotify are investing in their causal data science capabilities. This module will provide an introduction to the topic of causal inference with a focus on machine learning and AI based problems in business. In this module, students will conceptually learn how to apply causal inference for data and evidence driven decision making, at the intersection of data science and management strategy. Students will be exposed to various examples to apply concepts from causal analyses learnt in the module. The module will first introduce students to the world of causal inference, and cover standard tools that are used in empirical research, such as instrumental variables, regression discontinuity designs, difference-in-differences. The module will also include case studies that cover machine learning and AI based problems in business decisions. As the module will cover these topics conceptually, students do not need a particular background to take this class. However, some concepts such as conditional means, variances, hypothesis testing and regression will be covered at the beginning of the module. In-class lectures feature case studies and examples of causal inference research designs.

Content	The purpose of this module is to shed light on the social responsibility, compliance, and accountability-control issues that arise in a global business setting. The subject matter is treated as a key for developing critical insight into the world-wide regulatory challenges faced by corporations in implementing environment, social and climate change related reporting obligations, imposed both at the domestic and international level. The module takes the question regarding the practical relevance of three topics - social responsibility, compliance and management control/accountability - in the global context. Firstly, it traces the theories regarding the types and interpretations of corporate social responsibility (CSR), and it illustrates the numerous ways of making sense of it, according to the diverse assumptions about its nature and characteristics. It explores how a range of global emerging social, environmental and political issues impact corporate governance, risk management and strategy policies related to sustainability. Subsequently, it covers the development of the concept of social responsibility and how this is implemented by organizations, what its impact is, and potential future developments. Secondly, the module examines the legal and moral compliance issues and challenges related to these issues are faced by organizations operating in global business contexts. The regulations, standards, and guidance directives that address issues such as environmental compliance, competition, anti-bribery, social responsibility. UN sustainable development goals, ethical leadership and climate change transparency will be considered in this part of the module. Thirdly, the module examines the management control implications. It looks at the definition and interpretation of management control/accountability and at what constitutes the ethic of accountability. In doing so it examines the way social actors (and, to a certain extent, organizations), can situate themselves as members of an ongoing community that affect

Content	The module will guide students through the complete life cycle of a start-up venture from launch to exit. It specifies different stages that a new company may go through as it grows, and outlines financial challenges confronting entrepreneurial ventures along the way. Students will receive answers to key questions: how much money can and should be raised, what is the optimal timing of obtaining financing, what is a reasonable valuation of the venture, how and where to obtain financing, how funding should be structured and how to position a new venture strategically. Students will be introduced to knowledge, theories and corporate finance tools that will help to recognise venture value, measure and evaluate financial performance. This module is designed for students who have a basic understanding of finance and familiar with the concepts such as time value of money, basic valuation principles, basic risk and return trade-off fundamentals, basics of evaluation of investment alternatives. During the module students will be introduced to approaches to valuing new venture or start-up equity from a venture capital (VC) perspective, will learn about various types of investors (venture capital, business angels, private equity, early stage and traditional financing sources) and financing of high-risk, high-growth ventures, the optimal timing in terms of obtaining funding and when to go public, exit and turnaround strategies, and the impact of digitalisation on entrepreneurial finance market. The module is essential for those wishing to understand the financial aspects of entrepreneurship and interested in gaining a broader view of the financial landscape and deal structure for new ventures, and for those considering starting a company and raising capital.

Content	International sales and negotiations will introduce the students to business negotiation fundamentals and enable the students to understand different theories of negotiations for marketing and sales contexts.		
	The ability to negotiate with customers and partners is essential to business, and understanding how to plan and execute a negotiation process is a key competency.		
	This module will introduce negotiation techniques and strategies to plan and engage in negotiations as part of sales and marketing processes.

Content	Brands can be extremely valuable assets and a significant growth driver. This module will analyse how brands function as pivotal
	devices in today's society and the role of strategic brand management in customer value creation.
	During this module the student will acquire insights into how companies should manage brands to maximize brand equity. This
	includes knowledge about the different brand management decisions that must be made to build, measure, and manage a brand.
	Furthermore, the objective of this module is to provide the student with insights into central theories and approaches related to
	strategic brand management, including theories on how customers develop brand attitudes and behaviours.

Content	The module explores the internationalisation in emerging product and geographic markets. International companies respond to external or internal opportunities and use their creative efforts to introduce new products and services. They, in turn, help capture and retain market share, increase profitability, and achieve competitive advantage in international markets. The module analyses the emergence of products and services, as well as servitization of solutions integrating design and technology. It also explores geographic emerging markets, discusses the effects of internationalization on emerging markets and assesses risks and opportunities in emerging markets and transitional economies.

Content	The module explores the internationalisation of various types of organisational forms such as NGOs, platform organisations, non- for-profit organisations, etc. These forms are not well researched in the International Business literature and offer new avenues for exploring the diversity in internationalisation. The module aims to address the phenomenon of such organisations, cover relevant theories, frameworks, and practices in understanding their internationalisation, their types and relations with established forms of multinational firms. The impact of such organisational forms on society, policy, technology, economy, commerce and the challenges in their international activities and legitimation will be discussed.

Content	This module discusses the emerging trends of value creation such as from do it alone to value co-creation with global partners, establishing cross-border strategic alliances and networks for joint innovation, participating and orchestrating innovation ecosystem for sustainable development, etc. Students will develop knowledge and reflect on issues such as, but not limited to, MNCs' global innovation modes and strategies, business and innovation ecosystems, digital platforms, business ecosystem in emerging markets, and interplay between value co-creation and value capture for sustainable development. During this module, we will start with reflecting more conventional theories and value creation modes such as global value chain and network theory, then will progress to more contemporary theories and topics such as ecosystem theory, coopetition theory, and the impact of digitalization. The module adopts digital tools and employs various pedagogical methods including lecturing, group discussions, peer review and peer learning, games and experiments, simulation, etc.

Content	The objective of the module is to provide the student with theoretical and practical knowledge and abilities within financial control, trade and management of commodities as well as physical and financial exposures within the commodity market and, additionally, to relate to the ethics within the area. The student must develop abilities and skills to understand the market mechanisms in the commodity markets and handle the purchase and sale of commodities, theoretically and practically (simulated). The module is intended to provide the student with the strategic, financial and trading tools needed to handle both day-to-day management and risk management of commodities in practice. As part of this, the student will also get acquainted with the digital tools used to e.g. trade on the energy market, monitor fluctuation in the prices etc. in order to understand the technologies used in the domain, but also to inspire how these could be further developed and challenged.

Specialization Global Design Management (UoS)

The Global Design Management specialisation taught during the second year of the GTIME programme in Glasgow focuses on enabling the systematic role of design in linking creativity to innovation throughout the product development process; from conceptualisation through production and delivery to the market place. The programme aims to develop graduates with management capability who can deploy well-coordinated global product development strategies, operations and projects towards innovation within contemporary industrial settings. Graduates will understand design in innovation as a rigorous engineering process through which innovation can be driven and realised in a competitive global economy, and as a human centred approach that can discover latent societal needs and problems and develop solutions that are sensitive to the needs of all stakeholders.

Different modules introduce the students to key concepts within complex innovative design processes and management approaches, management of globally distributed creative teams at partner universities and the Postgraduate Group Project places student teams to work with an industrial client on a real world solution to client's prioritised brief. Students may integrate and apply design, manufacturing and operations management knowledge and skills to an industry based product and process development project and further develop project management skills. The latter half of the second year at the University of Strathclyde is characterised by the Global Research Project as an individual research project for which the student develops a relevant study topic of interest then executes, documents and presents critical research findings.

These taught and project based modules are supplemented by 2 modules chosen by the students from an approved list of optional modules. These include human centred design, design aesthetics, design methods, sustainable design and remanufacturing, product costing and financial management, quality management and lean six sigma, technology and innovation management, systems thinking, supply chain management and enterprise resource planning.

Specialization Sustainable Entrepreneurship (RUG)

The Sustainable Entrepreneurship specialisation at the University of Groningen aims to make participants part of a new generation of managers, entrepreneurs and policy advisors. The programme aims to help discover what makes sustainable businesses emerge, thrive and succeed.

- Work together with our partners entrepreneurs, non-governmental organisations and governmental institutions on real-world challenges.
- Develop leadership and management skills and gain academic and practical knowledge about sustainability.
- Learn how entrepreneurs and businesses contribute to solving complex social problems.

You will learn about sustainability challenges from different perspectives - from a start-up entrepreneur, to a large organisation established in their industry, to a policy advisor working on regulations for different levels of government. You will be equipped with leadership and alliance-building skills to connect companies and institutions on their sustainability journey.

Content	The course 'Foundations of sustainable entrepreneurship' offers students state-of-the-art academic insights concerning antecedents and consequences of sustainable entrepreneurship, and acts as a point-of-departure for all other courses. The course lab sessions start to prepare students for research, by exploring how to identify and formulate research problems and questions.

Content	The course 'Sustainable leadership' addresses the issue of designing sustainable organizations. It is taught parallel to Foundations, which touches on the structural side of sustainable organizations. Sustainable Leadership offers students state-of-the-art academic insights concerning antecedents and consequences of sustainable leadership. It moreover supports the further development of students' leadership skills both personal and relational.

Content	In this course, students will gain an increased understanding of organizations as complex phenomena and the role they play in meeting society's sustainability goals. Students will learn to identify an organizational sustainability transition project in an existing organization and collect secondary data to analyze sustainability challenges in organizations. We will review and discuss papers on the governance and implementation of organizational change as well as papers on the reasons behind the inertia of organizations.

Content	The course 'Sustainable Strategy' offers students state-of-the-art academic insights on strategy, including what it is, what role it plays and how to design strategy for sustainable outcomes. This course gives students the opportunity to learn and reflect on the role of strategy in the design of sustainable enterprises, and how theories on value creation have developed and evolved. In doing so, this course provides a variety of perspectives on why, how and for whom businesses create value, and the tools which can help in these endeavors.

Content	The course 'New Economic Realities' offers students state-of-the-art academic insights on key concepts of post-growth and well-
	being-oriented economic frameworks (e.g., embedded economy, dynamic complexity, distributive & regenerative design) -
	including key distinctions
	to traditional neo-liberalistic and GDP-growth-oriented economic frameworks (e.g., economic equilibria, homo economicus, top-
	down wealth distribution). The lab component of this course will focus on the debating skills of the students and will require them
	to apply a variety of concepts and techniques that underlay best practice in debating. Students will write a term paper and engage
	in at least two "on-stage" debates.

Content	In this course, students will obtain knowledge about academic debates in sustainable performance and performance measurement. Students will also bring this knowledge into practice by considering various existing performance evaluation frameworks and applying these to real organisations. Finally, students are encouraged to critically analyse and improve the existing performance evaluation frameworks. This course inspires students to fundamentally think about the multi-dimensional nature of sustainable entrepreneurship and its need to simultaneously explain their success from different angles and metrics.

Specialization Opportunities and Challenges for Innovation Management in New Economic Powerhouses (MU)

Manipal University is synonymous with excellence in higher education. Over 28,000 students from 57 different nations live, learn and play in the sprawling university town. The university has pioneered in every sector, engineering, management, communication and humanities and management, with all its institutes being mapped on the national and international radar. The School of Management, established in 1999, has been shaping professionally competent, socially responsible and ethical management postgraduates. The School draws its strength from its team of dedicated and experienced faculty members. Many of them have industry experience and have commendable record in research and research publication.

The second year of the GTIME program offered by the School, attempts to explore the rapidly changing business landscape in India. It attempts to provide students with a platform to explore this rich developing economy and trace its journey as it emerges into a strong economic power house. The third semester would commence with a one-week cultural immersion program that will sensitize students to the rich cultural heritage of India. This cultural program will also be a birds-eye view of the business culture operational in India. The courses offered in the third semester will provide students with insights into the business models operational in India and changing contours of the business environment. A potent, powerful blend pedagogy consisting of lectures, discussions, on-site visits and case studies will be employed. The project undertaken by the students in the fourth semester will enable them to obtain a hands one experience in an organization where he/she will be able to relate the class room discussions practically.

Specialization Technology and Innovation Management in Japan (APU)

Ritsumeikan University uses the second year of the GTIME program to introduce the students to innovation processes and management approaches used in Japan. Since the global success of Japanese companies, practitioners and scholars around the world have shown an increased interest in and appreciation for Japanese management principles and innovative practices. Japanese companies have for a long time adapted Western ideas of quality and innovation to the Japanese context and introduced new and innovative innovation processes and management techniques. Japan is still a leading driver in the migration toward global operations, integrating design, sourcing, manufacturing and distribution of products and services globally.

The second year in Japan adds to the global character of the master in innovation and technology management. Considering the renowned innovation process of the industry in Japan and the unique innovation processes used in Japan, it is a clear advantage to have focused course- and seminar modules about Japanese product and process innovation conduced in Japan. The students who choose Ritsumeikan University in Japan as their second year destination gain invaluable insights into the Japanese approach to innovation and the international competitiveness that arises from it.

Module M1355: Information Technology Management (APU) Courses Title CP Тур Hrs/wk Information Technology Management (APU) (L1930) Lecture 4 Prof. Yukihiko Nakata Module Responsible **Admission Requirements** None **Recommended Previous** None Knowledge After taking part successfully, students have reached the following learning results Educational Objectives **Professional Competence** Knowledge Subject-related knowledge and understanding: • The value of IT to organizations. • The role of information technology for product and process development and the value of innovations. 	from it - are more and more based on information than on physical apparatus. Innovations are embedded in information networks and the value of a physical apparatus is based on how much information is processed or made available through the apparatus. In addition, information technology Management is important to accelerate innovations and strengthen competitiveness and, therefore, one of the key parts of Management of Technology (MOT), which is the management to lead R&D to business and add extra value. The course objective is to master "Total Information Technology Management (ITM)". This concepts generally aim at leading R&D and business processes to effectively utilize IT in order to strengthen competitiveness. The course objective is to master "Total Information Technology (SOT)" and "Management of Technological (MOT)". • Why "Information Technology Management"? • Paradigm Shift of IT Management • IT in the 21st century • Smartphone, Big data etc. • The Role of Information in innovation • Case Study of iPOd: Video Case Study • "The iPOd Revolution" • E-Business and E-Commerce • E-business • Online Shopping Video Case Study • CEO exchange: Bezos of Amazon and Dyer of Land's End • Transaction Processing, Functional Application and Integration Managing Production • Emerging IT Management • Knowledge Management • Requirements for Digitalization • IT systems for Total Supply Chain Management • Supply Chain Enterprise Resource • Radio Frequency Identification (RFID • Case Study of JR-Suica Video Case Study "Project X; Challenger IC Card System of JR-Suica" • Build to Order • Mass customization • Video Case Study of IR-Suica Video Case Study "Project X; Challenger IC Card System of JR-Suica" • Build to Order

Specialization Technology Venturing (KTU)

Kaunas University of Technology (KTU) in Lithuania specialises in Technology Venturing during the second year of the GTIME program. Students will gain a broad understanding of the technology venturing process within different size projects and different industrial contexts. All studied topics are pulled together to develop 'right to win' business strategies that are sustainable and differentiated.

The modules at KTU are structured around the following topics: How to initiate technology venturing and develop business model for technology driven business? How to build a successful team for venturing and create a successful start-up? What are the differences between an idea and true opportunity and how to search for promising business opportunities? How to gather the resources necessary to create a great company and leverage venture capital? How to pitch business ideas to investors and manage stakeholder relations? How to assess business value and monitor business growth? What is entrepreneurial leadership in a large company? How to take advantage of doing business within the networks? How to manage corporate intellectual property in order stay competitive in the market? How can organizations fully exploit their potential and capture maximum value for growth and success?

The second-year modules in Kaunas are designed and executed by top academic researchers, and therefore are strongly research oriented. By introducing students to the state-of-the-art in academic research, the aim is to give them necessary tools to properly understand, evaluate and solve real-life cases, and to successfully conduct their final master degree project research.

The problem-based study approach adopted at KTU is intended to disclose a full variety of the problems related to technology venturing that arise in a wide range of different contexts, including: manufacturing, services, small to large organizations and the private and public sectors.

Specialization Value-Driven Technology Business Development (TAU)

At TAU students will have the opportunity to specialise in **Value-Driven Technology Business Development**. Teaching offered in this specialisation integrates technology management, management of sales & finance, and value-creation & communication, complementing the learning content of the first year of the GTIME studies.

The courses offered at TAU will have value creation, value quantification, value communication and value capture as common factors. They will provide solid understanding how organizations create, quantify, communicate and capture value successfully in various contexts and how to apply this knowledge creatively in various organizational contexts.

	After completing this course (Final Grade 1), a student has some idea about the expectations Finnish work environment sets on young business development professionals. The company project is executed with minimal effort and brings no real value to the company. Nevertheless, the student understands the basic idea of constructing the objective and the narrative for an empirical to the compare and select information using research literature (and also understand the difference between peer-reviewed material and other sources) related to their empirical project work and its work to the difference between page a summary of the concepts and the concepts and the case. After completing the course (Final Grade 2), a student the difference between peer-reviewed material and other sources) related to their sources and the construct a student is able to construct a source or writing (though the project management and action plans still mainly rely on the assistant/teacher). The student is able to construct a
	simple theoretical framework and apply the framework in an empirical project and resulting research paper. In addition, the student invests some effort in developing the company projects, although the results are not yet meaningful. The student writes simple yet understandable English and the paper has an identifiable narrative fulfilling the defined research objectives. The student is also aware of the data gathering methods used in qualitative management research and knows how to document the data gathering process. Similarly, the student is able to follow given instructions to push forward simple development tasks.
	After completing the course (Final Grade 3), the student is able to execute an empirical research project with the help of a supervisor; the student is able to actively seek help when needed and also follow the given instructions (with positive attitude),

Module Manual M.Sc. "Global Technology and Innovation Management & Entrepreneurship"

adding value on top of the advice given. The student is able to build a narrative for a research report with the help of the supervisor and apply the key theoretical concepts appropriately. The company project proceeds well and produces value to the company. The student is able to write simple yet rather flawless English following formatting instructions and reference practices as well as apply the basic tools needed for good cohesion. The student is able to link some empirical findings back to the research literature and the findings are visually connected to the framework built, hence complementing the framework deduced from the theory.

After completing the course (Final Grade 4), the student is able to manage her/his projects independently, seeking advice with good, well-structured questions when needed (with the course material and other evident sources consulted first). The student understands how the active, independent work with the case company makes the managers communicate actively with the student who is now clearly in the driver seat of the project. The student can identify development needs and structure the problem with a conceptual, visual representation as well as propose several potential solutions. The student has developed a habit to report systematically to the supervisors to keep them interested regarding the theoretical work going on. The student knows how to document the theoretical work in a way that feels natural and comfortable to her/himself. The student invests a good amount of effort into the company project, which results in some meaningful findings. The student understands how research interventions are used to 'tease out' theoretically-interesting questions/results with potential for a theory contribution and how to apply that knowledge when building an empirical research setting. The student is also to write professional English with a well-considered narrative, good cohesion, elegant formatting and smart referencing, including almost ready-for-press quality illustrations/visuals.

After completing the course (Final Grade 5), the student is able to execute an empirical research process independently and identify interesting theory contributions on her/his own, though the final argumentation and final visual representations may still need some advice from the supervisors. The student is able to keep both supervisors and company stakeholders interested in the work by good, systematic reporting, engaging the supervisors in the process in a positive way - even when the student needs help, the requests are well structured and the questions show the in-depth understanding of the context as well as the relevant literature. The student knows how to document the interventionist research process and how to show the chain of evidence regarding how the empirical case produced the key findings and the role the intervention played in the process. The student is able to identify findings with theory contribution and position them in the existing literature as well as argue the contribution potential. The student invests a lot of time and effort into the company project, proven by the amount of produced value. The student is able to write academic English in terms of narrative, cohesion, formatting and referencing plus the visuals.

After this course, students should have a good starting point for working on their Master's Thesis rather independently - in terms of (1) understanding of different empirical data gathering methods, (2) conceptual thinking and (3) empirical research work and its documentation as well as (4) the structure, content and narrative of a thesis. Different managerial concepts, in the end, are tools for both researchers and managers alike to develop their thinking and understanding on complex issues. Students can solve managerial problems in different organizations with the help of the existing literature and are able to reflect the reality using the existing literature and concepts. The student understands how the active work in the field, in the spirit of interventionist research, can be a way to (1) get access to the organization, (2) become a team member, hence (3) providing access to more interesting research data. Naturally, each student will gain expertise in the content area of the paper.

The following shows the learning objectives connected to grading:

After completing this course (Final Grade 1), a student has some idea about the expectations Finnish work environment sets on young business development professionals. The company project is executed with minimal effort and brings no real value to the company. Nevertheless, the student understands the basic idea of constructing the objective and the narrative for an empirical research paper describing the research project and its key findings. The student is able to acquire, evaluate, compare and select information using research literature (and also understand the difference between peer-reviewed material and other sources) related to their empirical project work and research objective as well as provide a summary of the concepts applied in the case.

After completing the course (Final Grade 2), a student knows how to push forward her/his own work, either in the case or writing (though the project management and action plans still mainly rely on the assistant/teacher). The student is able to construct a simple theoretical framework and apply the framework in an empirical project and resulting research paper. In addition, the student invests some effort in developing the company projects, although the results are not yet meaningful. The student writes simple yet understandable English and the paper has an identifiable narrative fulfilling the defined research objectives. The student is also aware of the data gathering methods used in qualitative management research and knows how to document the data gathering process. Similarly, the student is able to follow given instructions to push forward simple development tasks.

After completing the course (Final Grade 3), the student is able to execute an empirical research project with the help of a supervisor; the student is able to actively seek help when needed and also follow the given instructions (with positive attitude), adding value on top of the advice given. The student is able to build a narrative for a research report with the help of the supervisor and apply the key theoretical concepts appropriately. The company project proceeds well and produces value to the company. The student is able to write simple yet rather flawless English following formatting instructions and reference practices as well as apply the basic tools needed for good cohesion. The student is able to link some empirical findings back to the research literature and the findings are visually connected to the framework built, hence complementing the framework deduced from the theory.

After completing the course (Final Grade 4), the student is able to manage her/his projects independently, seeking advice with good, well-structured questions when needed (with the course material and other evident sources consulted first). The student understands how the active, independent work with the case company makes the managers communicate actively with the student who is now clearly in the driver seat of the project. The student can identify development needs and structure the problem with a conceptual, visual representation as well as propose several potential solutions. The student has developed a habit to report systematically to the supervisors to keep them interested regarding the theoretical work going on. The student knows how to document the theoretical work in a way that feels natural and comfortable to her/himself. The student invests a good amount of effort into the company project, which results in some meaningful findings. The student understands how research interventions

Entrepreneurship"	
	are used to 'tease out' theoretically-interesting questions/results with potential for a theory contribution and how to apply that knowledge when building an empirical research setting. The student is also to write professional English with a well-considered narrative, good cohesion, elegant formatting and smart referencing, including almost ready-for-press quality illustrations/visuals.
	After completing the course (Final Grade 5), the student is able to execute an empirical research process independently and identify interesting theory contributions on her/his own, though the final argumentation and final visual representations may still need some advice from the supervisors. The student is able to keep both supervisors and company stakeholders interested in the work by good, systematic reporting, engaging the supervisors in the process in a positive way - even when the student needs help, the requests are well structured and the questions show the in-depth understanding of the context as well as the relevant literature. The student knows how to document the interventionist research process and how to show the chain of evidence regarding how the empirical case produced the key findings and the role the intervention played in the process. The student is able to identify findings with theory contribution and position them in the existing literature as well as argue the contribution potential. The student invests a lot of time and effort into the company project, proven by the amount of produced value. The student is able
	to write academic English in terms of narrative, cohesion, formatting and referencing plus the visuals.
Literature	Nach Abschluss des Kurses (Abschlussnote 5) ist der/die Studierende in der Lage, selbständig einen empirischen Forschungsprozess durchzuführen und interessante Theoriebeiträge zu identifizieren, auch wenn die abschließende Argumentation und die abschließenden visuellen Darstellungen noch einiger Beratung durch die Betreuer bedürfen. Die/der Studierende ist in der Lage, sowohl die BetreuerInnen als auch die Stakeholder des Unternehmens durch eine gute, systematische Berichterstattung für die Arbeit zu interessieren und die BetreuerInnen auf positive Weise in den Prozess einzubinden - selbst wenn die/der Studierende Hilfe benötigt, sind die Anfragen gut strukturiert und die Fragen zeigen ein tiefgehendes Verständnis des Kontexts sowie der relevanten Literatur. Der/die Studierende weiß, wie er/sie den interventionistischen Forschungsprozess dokumentiert und wie er/sie die Beweiskette aufzeigt, wie der empirische Fall zu den Schlüsselergebnissen führte und welche Rolle die Intervention in diesem Prozess spielte. Der/die Studierende ist in der Lage, Ergebnisse mit Theoriebeitrag zu identifizieren und in der bestehenden Literatur zu positionieren sowie das Beitragspotenzial zu argumentieren. Der/die Studierende investiert viel Zeit und Mühe in das Unternehmensprojekt, was durch den Umfang des produzierten Werts belegt wird. Der/die Studierende ist in der Lage, akademisches Englisch in Bezug auf Erzählung, Kohäsion, Formatierung und Referenzierung sowie visuelle Darstellungen zu schreiben.
	Nach diesem Kurs sollten die Studierenden eine gute Ausgangsbasis haben, um ihre Masterarbeit relativ selbstständig zu bearbeiten - in Bezug auf (1) das Verständnis verschiedener Methoden der empirischen Datenerhebung, (2) konzeptionelles Denken und (3) empirische Forschungsarbeit und deren Dokumentation sowie (4) die Struktur, den Inhalt und die Erzählweise einer Arbeit. Die verschiedenen Managementkonzepte sind letztlich Werkzeuge für Forscher und Manager gleichermaßen, um ihr Denken und ihr Verständnis für komplexe Probleme zu entwickeln. Die Studierenden können Managementprobleme in verschiedenen Organisationen mit Hilfe der vorhandenen Literatur lösen und sind in der Lage, die Realität anhand der vorhandenen Literatur und Konzepte zu reflektieren. Der Student versteht, wie die aktive Arbeit vor Ort im Sinne der interventionistischen Forschung ein Weg sein kann, (1) Zugang zur Organisation zu erhalten, (2) ein Teammitglied zu werden und damit (3) Zugang zu interessanteren Forschungsdaten zu erhalten. Natürlich erwirbt jeder Student Fachwissen über den Inhaltsbereich der Arbeit.
	Im Folgenden werden die mit der Benotung verbundenen Lernziele dargestellt: Nach Abschluss dieses Kurses (Abschlussnote 1) hat der Student eine Vorstellung von den Erwartungen, die das finnische Arbeitsumfeld an junge Fachleute im Bereich der Unternehmensentwicklung stellt. Das Unternehmensprojekt wird mit minimalem Aufwand durchgeführt und bringt keinen wirklichen Wert für das Unternehmen. Nichtsdestotrotz versteht der Schüler die Grundidee, die Zielsetzung und den Bericht für eine empirische Forschungsarbeit zu formulieren, die das Forschungsprojekt und seine wichtigsten Ergebnisse beschreibt. Der Student ist in der Lage, Informationen aus der Forschungsliteratur zu beschaffen, zu bewerten, zu vergleichen und auszuwählen (und auch den Unterschied zwischen begutachtetem Material und anderen Quellen zu verstehen), die sich auf seine empirische Projektarbeit und sein Forschungsziel beziehen, sowie eine Zusammenfassung der im Fall angewandten Konzepte zu erstellen. Nach Beendigung des Kurses (Abschlussnote 2) weiß ein/e Schüler/in, wie er/sie seine/ihre eigene Arbeit vorantreiben kann,
	entweder im Fall oder schriftlich (obwohl das Projektmanagement und die Aktionspläne immer noch hauptsächlich vom Assistenten/Lehrer abhängen). Der/die Studierende ist in der Lage, einen einfachen theoretischen Rahmen zu konstruieren und diesen in einem empirischen Projekt und einer daraus resultierenden Forschungsarbeit anzuwenden. Darüber hinaus investiert der Studierende einige Anstrengungen in die Entwicklung von Unternehmensprojekten, obwohl die Ergebnisse noch nicht aussagekräftig sind. Der Student schreibt in einfachem, aber verständlichem Englisch und die Arbeit hat eine erkennbare Erzählung, die die definierten Forschungsziele erfüllt. Der Studierende kennt die Methoden der Datenerhebung in der qualitativen Managementforschung und weiß, wie man den Datenerhebungsprozess dokumentiert. Ebenso ist der Studierende in der Lage, vorgegebene Anweisungen zu befolgen, um einfache Entwicklungsaufgaben voranzutreiben.
	Nach Abschluss des Kurses (Abschlussnote 3) ist der Studierende in der Lage, ein empirisches Forschungsprojekt mit Hilfe eines Betreuers durchzuführen; er ist in der Lage, bei Bedarf aktiv um Hilfe zu bitten und die gegebenen Anweisungen (mit positiver Einstellung) zu befolgen und den gegebenen Ratschlägen einen Mehrwert hinzuzufügen. Der Studierende ist in der Lage, mit Hilfe des Betreuers eine Darstellung für einen Forschungsbericht zu erstellen und die wichtigsten theoretischen Konzepte angemessen anzuwenden. Das Unternehmensprojekt kommt gut voran und bringt dem Unternehmen einen Mehrwert. Der/die Studierende ist in der Lage, einfache, aber ziemlich fehlerfreie englische Texte zu verfassen, indem er/sie die Formatierungsanweisungen und Referenzpraktiken befolgt und die grundlegenden Werkzeuge anwendet, die für eine gute Kohäsion erforderlich sind. Der Student ist in der Lage, einige empirische Ergebnisse mit der Forschungsliteratur zu verknüpfen, und die Ergebnisse sind visuell mit dem erstellten Rahmen verbunden, wodurch der aus der Theorie abgeleitete Rahmen ergänzt wird.
	Nach Abschluss des Kurses (Abschlussnote 4) ist der/die Studierende in der Lage, seine/ihre Projekte selbstständig zu verwalten und bei Bedarf mit guten, gut strukturierten Fragen Rat zu suchen (wobei das Kursmaterial und andere offensichtliche Quellen zuerst konsultiert werden). Der/die Studierende versteht, wie die aktive, selbständige Arbeit mit dem Fallunternehmen die Manager dazu bringt, aktiv mit dem/der Studierenden zu kommunizieren, der/die nun eindeutig auf dem Fahrersitz des Projekts sitzt. Der Student kann den Entwicklungsbedarf identifizieren und das Problem mit einer konzeptionellen, visuellen Darstellung strukturieren sowie mehrere potenzielle Lösungen vorschlagen. Der Student hat sich angewöhnt, seinen Vorgesetzten

systematisch Bericht zu erstatten, um deren Interesse an der theoretischen Arbeit aufrechtzuerhalten. Der/die Studierende weiß, wie er/sie die theoretische Arbeit in einer Weise dokumentiert, die ihm/ihr natürlich und angenehm erscheint. Der Student/die Studentin investiert ein gutes Maß an Anstrengung in das Unternehmensprojekt, was zu einigen aussagekräftigen Ergebnissen führt. Die/der Studierende versteht, wie Forschungsinterventionen eingesetzt werden, um theoretisch interessante Fragen/Ergebnisse mit Potenzial für einen Theoriebeitrag herauszuarbeiten, und wie man dieses Wissen beim Aufbau eines empirischen Forschungssettings anwendet. Der Student soll auch einen professionellen englischen Text mit einer gut durchdachten Erzählung, gutem Zusammenhalt, eleganter Formatierung und intelligenter Referenzierung schreiben, einschließlich fast druckreifer Illustrationen/Visualisierungen.

Content	In business organizations, people are increasingly managed with numbers. Thus, after passing the course (Final grade 1), students are familiar with the basic financial concepts and tools used in the industry and are able to use them in simple contexts. However, in the management field, these concepts and tools must be applied in order to provide the foundation for decision-making. With final grades 2 and 3, students are able to understand how such concepts and tools are used to support management decisions making. In today's knowledge economy, financial information not only is seen as a tool for managing people or organizations. Instead, it is increasingly seen as a source of innovation. Analyzing financial data may, for example, reveal that some customers are willing to pay more of the same product than others, hence helping the company to target its customers better. Understanding of value creation requires that companies are not only able to analyze their own costs but, instead, they also need to analyze the costs of their customers and sometimes even their customer's customers. Similarly, companies are looking for new performance measurement systems or compensation plans to guide the organization to do the right things in order to maximize the value creation and, eventually, outperform the competition. Students passing the course with final grade of 4 and 5 are able to understand the role financial information can play in such business development processes and how financial tools can be applied in innovative ways.

	The objective of the course is to understand the nature of operative sales in B2B markets and the key concepts used for business development in global B2B networks. After the course students understand the key characteristics of B2B markets and operative sales processes. Furthermore, students are familiar with the basic concepts and tools used in the planning, management and improvement of the operative sales processes in B2B context. Guest lecturers will be used to illustrate what development of B2B sales practices and processes mean in practice. In addition, the student papers used as course material will provide an opportunity for 'peer learning' since those papers have been written by first year master's students majoring in International Sales and Sourcing; the papers will illustrate how some 'peers with similar background' have applied business concepts and tools in their practical business development projects.				
	To support business development in business networks, the course also includes elements of financial and management accounting, focusing on concepts relevant to sales professionals with the special emphasis on value creation and value capture. Thus, after the course students are able to apply contribution and full costing in simple pricing situations. The students also understand basic principles how business potential of a new offering or a new market can be quantified and are able to use that knowledge in the budgeting process. Finally, the students are able to apply financial key ratios to analyze income statement and balance sheet in order to evaluate and prioritize existing and potential customers.				
	Selling technology-intensive products and services requires close collaboration with customers in order to help customers solve complex problems, making sales professionals almost consultants. To support that, the course also contains exercise on face-to-face sales negotiation to enable students to evaluate their current communication skills and potential areas of improvement. Thus, after the course students understand principles of good business interaction, are able to prepare and give a short 'pitch' focusing on essential elements from the customer's point of view and are aware of areas in business communication that still need improvement.
