Bachelor of Science

Logistics and Mobility

Cohort: Winter Term 2015

Updated: 7th June 2016

Table of Contents

Program description

Content

Economic development with its swift changes in products and processes has led to a considerable transformation of inter-company division of labor. Today, cross-enterprise supply chains in which complex production processes must be planned, shaped, and controlled characterize this division of labor. Transportation, transshipment, and storage play a decisive role in this process.

Conducting business successfully under these framework conditions is made possible by the interaction of innovative technical systems, information and communication technologies, and management strategies. That is why the study program for a BSc in Logistics and Mobility, which prepares students for this area of business is focused on an extensive interdisciplinary basic knowledge of science, engineering, and business management. In the course of their studies students learn how to deal with issues arising from logistics and transport planning.

Career prospects

Graduates can embark directly on a career in logistics or transport planning. The study program prepares them for independent and collaborative work and for work in positions of responsibility.

Possible employers include logistics industry enterprises, manufacturing industry and commerce, engineering and planning firms, transport companies, construction companies, infrastructure management and the public sector (especially in transport planning).

Learning target

The acquired competences enable graduates to analyze, shape, and control logistics and transportation systems by means of their wide-ranging, in-depth technical and management expertise and the methods they have learnt. Integrated and analytic thinking enables them to make sense of and optimize connected processes. Graduates are able to plan and control the flow systems – of goods, people, information, and money – that are needed for manufacturing goods and providing services and to apply their theoretical knowledge to practical issues. Due to the program's alignment to basics of engineering and business management graduates are able to solve technical problems, to devise new technical systems for logistics and transportation systems, and to evaluate them in economic terms.

Personal competences are another important part of the study program. Students are prepared by group assignments and project work to work their way into problems either individually or in teams and to solve them either on their own or in collaboration with other members of the team. On completion of their studies they are able to formulate their findings precisely in writing and to present them in an appropriate manner to an (expert) audience. Graduates are able to apply methods of scientific work reliably and are thus qualified to work in research or to deepen their competences by studying for a second degree.

Program structure

The study program is structured into the "core qualification", the "Specialisation Engineering Science", the "Specialisation Logistics and Mobility" and the Thesis.

In the core qualification students are tought the basics of mathematics, engineering science, business administration and logistics and mobility. The core qualification is completed by nontechnical complementary courses and a project course in the fifth semester for preparing students for the bachelor thesis.

In the specialisation engineering science students have the possibility to chose two courses out of nine selectables for the fifth and sixth semester to deepen their knowledge in the respective technical field.

In the specialisation logistics and mobility students can chose four out of eight selectables of the fields of logistics and traffic planning to deepen their knowledge in the respective fields.

The bachelor thesis takes place in the sixth semester.

At the Hamburg University of Technology Graduates can follow on from their BSc in Logistics and Mobility and study among others for a MSc in "Logistics, Infrastructure, and Mobility" or a MSc in "International Management and Engineering".

Core qualification

Students gain basic knowledge as well as deepend skills in mathematics and business administration.

Module M0569: Engineering Mechanics I

Courses

Title	Typ	Hrs/wk	CP
Engineering Mechanics I (L0187)	Lecture	3	3
Engineering Mechanics I (L0190)	Recitation Section (small)	2	3

Module Responsible	Prof. Uwe Weltin
Admission Requirements	none
Recommended Previous Knowledge	Elementary knowledge in mathematics and physics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to describe fundamental connections, theories and methods to calculate forces in statically determined mounted systems of rigid bodies and fundamentals in elastostatics.
Skills	Students are able to apply theories and methods to calculate forces in statically determined mounted systems of rigid bodies and fundamentals of elastostatics.
Personal Competence	
Social Competence	Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities.
Autonomy	Students are able to solve individually exercises related to this lecture.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	90 min.
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Compulsory Electrical Engineering: Core qualification: Elective Compulsory Energy and Environmental Engineering: Core qualification: Compulsory Computational Science and Engineering: Core qualification: Compulsory Logistics and Mobility: Core qualification: Compulsory Process Engineering: Core qualification: Compulsory

Course L0187: Engineering Mechanics I

Typ	Lecture
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Uwe Weltin
Language	DE
Cycle	WiSe
Content	Methods to calculate forces in statically determined systems of rigid bodies • Newton-Euler-Method • Energy-Methods Fundamentals of elasticity • Forces and deformations in elastic systems
Literature	• Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 1: Statik, Springer Vieweg, 2013 • Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 2: Elastostatik, Springer Verlag, 2011 • Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 1: Statik, Springer Vieweg, 2013 • Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 2: Elastostatik, Springer Verlag, 2011 • Hibbeler, Russel C.: Technische Mechanik 1 Statik, Pearson Studium, 2012 • Hibbeler, Russel C.: Technische Mechanik 2 Festigkeitslehre, Pearson Studium, 2013 • Hauger, W.; Mannl, V.; Wall, W.A.; Werner, E.: Aufgaben zu Technische Mechanik 1-3: Statik, Elastostatik, Kinetik, Springer Verlag, 2011

Course L0190: Engineering Mechanics I	
Typ	Recitation Section (small)
Hrs/wk	2

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Uwe Weltin
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Module M0577: Nontechnical Complementary Courses for Bachelors

Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	**The Non-technical Elective Study Area** imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its **teaching architecture**, in its **teaching and learning arrangements**, in **teaching areas** and by means of teaching offerings in which students can qualify by opting for **specific competences** and a **competence level** at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses. **The Learning Architecture** consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the "non-technical department" follow the specific profiling of TUHH degree courses. The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles" The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies. **Teaching and Learning Arrangements** provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses. **Fields of Teaching** are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way. The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations. **The Competence Level** of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc. This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life. **Specialized Competence (Knowledge)** Students can • locate selected specialized areas with the relevant non-technical mother discipline, • outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, • different specialist disciplines relate to their own discipline and differentiate it as well as make connections, • sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, • Can communicate in a foreign language in a manner appropriate to the subject.
Skills	**Professional Competence (Skills)** In selected sub-areas students can • apply basic methods of the said scientific disciplines, • auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, • to handle simple questions in aforementioned scientific disciplines in a sucsessful manner, • justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.
Personal Competence	
Social Competence	**Personal Competences (Social Skills)** Students will be able

	• to learn to collaborate in different manner, • to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, • to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), • to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	**Personal Competences (Self-reliance)** Students are able in selected areas • to reflect on their own profession and professionalism in the context of real-life fields of application • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in writen form or verbaly • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses
Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0650: Introduction to Logistics and Mobility

Courses

Title	Typ	Hrs/wk	CP
Introduction to Scientific Work (L0474)	Lecture	2	2
Freight Traffic and Logistics (L0390)	Lecture	2	2
Freight Traffic and Logistics (L0391)	Recitation Section (small)	1	2

Module Responsible	Prof. Heike Flämig
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students can... • describe the historical development of logistics • name the basic functions of logistics • describe systems and process analysis concepts • describe supply chain management and logistics concepts • describe the connection between logistical decisions and freight traffic development
Skills	Students can... • apply basic concepts and methods of logistics phase systems • analyze logistical systems and select alternative logistics concepts • solve problems systematically
Personal Competence	
Social Competence	Students can... • collaborate in groups to reach and record work outcomes • give appropriate feedback and deal constructively with feedback on their work
Autonomy	Students can... • assess their own learning progress • conduct literature research and analyses independently and cite them properly • organize and complete the work set independently in terms of both time and content • produce written work independently
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	60 minutes
Assignment for the Following Curricula	Logistics and Mobility: Core qualification: Compulsory

Course L0474: Introduction to Scientific Work	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Regina Wagner
Language	DE
Cycle	WiSe
Content	• Introduction to research and science • Finding a topic and planning the work (topics, scheduling, work planning, organization) • Literature review (finding, organizing and analyzing literature, databanks, reading scientific papers, PhD works) • Correct citing (adequate behavior with literature, plagiarism, citation types, citation programs) • Structuring a scientific work (organizing material, research questions, exposée, arguments, structure) • Formating and layout (grouping, foot notes, formating in word) • Presentation (presentation layers, structure, presenting, powerpoint use) • Tips and tricks (do's and dont's, supervisor, industrial works, evaluating submissions, team work, "best of")

Course L0390: Freight Traffic and Logistics	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Heike Flämig
Language	DE
Cycle	WiSe

Content	The course gives an introductory overview of the basics of supply chain management and logistics and their interaction with freight traffic and thus the significance of traffic planning for business activities. In addition, examples of ecologically and economically sustainable best practice are discussed. The following subject areas are covered:
	• Historical development of logistics
	• Systemic thinking in logistics
	• Concepts, trends and strategies in the field of
	  ◦ Procurement logistics
	  ◦ Production logistics
	  ◦ Distribution logistics
	  ◦ Reverse logistics
	  ◦ Storage logistics
	  ◦ Transport logistics
	  ◦ Handling logistics
	• Basics of the connection between logistical decisions and traffic
	• Introduction to traffic policy
	• Scope for design of (sustainable) freight traffic and logistics
	The course contents will be consolidated by means of online surveys, Wiki entries by students and special practice sessions and illustrated by means of excursions.

Module M0829: Foundations of Management

Courses

Title	Typ	Hrs/wk	CP
Introduction to Management (L0880)	Lecture	4	4
Project Entrepreneurship (L0882)	Problem-based Learning	2	2

Module Responsible	Prof. Christoph Ihl
Admission Requirements	None
Recommended Previous Knowledge	Basic Knowledge of Mathematics and Business
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	After taking this module, students know the important basics of many different areas in Business and Management, from Planning and Organisation to Marketing and Innovation, and also to Investment and Controlling. In particular they are able to • explain the differences between Economics and Management and the sub-disciplines in Management and to name important definitions from the field of Management • explain the most important aspects of and goals in Management and name the most important aspects of entreprneurial projects • describe and explain basic business functions as production, procurement and sourcing, supply chain management, organization and human ressource management, information management, innovation management and marketing • explain the relevance of planning and decision making in Business, esp. in situations under multiple objectives and uncertainty, and explain some basic methods from mathematical Finance • state basics from accounting and costing and selected controlling methods.
Skills	Students are able to analyse business units with respect to different criteria (organization, objectives, strategies etc.) and to carry out an Entrepreneurship project in a team. In particular, they are able to • analyse Management goals and structure them appropriately • analyse organisational and staff structures of companies • apply methods for decision making under multiple objectives, under uncertainty and under risk • analyse production and procurement systems and Business information systems • analyse and apply basic methods of marketing • select and apply basic methods from mathematical finance to predefined problems • apply basic methods from accounting, costing and controlling to predefined problems
Personal Competence	
Social Competence	Students are able to • work successfully in a team of students • to apply their knowledge from the lecture to an entrepreneurship project and write a coherent report on the project • to communicate appropriately and • to cooperate respectfully with their fellow students.
Autonomy	Students are able to • work in a team and to organize the team themselves • to write a report on their project.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84
Credit points	6
Examination	Written exam
Examination duration and scale	90 Minuten
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program): Specialisation Computer Science and Engineering: Compulsory General Engineering Science (German program): Specialisation Chemical Engineering: Compulsory General Engineering Science (German program): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (German program): Specialisation Energy and Enviromental Engineering: Compulsory General Engineering Science (German program): Specialisation Civil- and Enviromental Engeneering: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program): Specialisation Naval Architecture: Compulsory Civil- and Environmental Engineering: Core qualification: Compulsory Bioprocess Engineering: Core qualification: Compulsory Computer Science: Core qualification: Compulsory Electrical Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Civil- and Enviromental Engeneering: Compulsory General Engineering Science (English program): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program): Specialisation Energy and Enviromental Engineering: Compulsory General Engineering Science (English program): Specialisation Computer Science and Engineering: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering: Compulsory

Typ	Problem-based Learning
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Christoph Ihl
Language	DE
Cycle	WiSe/SoSe
Content	In this project module, students work on an Entrepreneurship project. They are required to go through all relevant steps, from the first idea to the concept, using their knowledge from the corresponding lecture. Project work is carried out in teams with the support of a mentor.
Literature	Relevante Literatur aus der korrespondierenden Vorlesung.

Module M0850: Mathematics I

Courses

Title	Typ	Hrs/wk	CP
Analysis I (L1010)	Lecture	2	2
Analysis I (L1012)	Recitation Section (small)	1	1
Analysis I (L1013)	Recitation Section (large)	1	1
Linear Algebra I (L0912)	Lecture	2	2
Linear Algebra I (L0913)	Recitation Section (small)	1	1
Linear Algebra I (L0914)	Recitation Section (large)	1	1

Module Responsible	Prof. Anusch Taraz
Admission Requirements	none
Recommended Previous Knowledge	School mathematics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	• Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples. • Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. • They know proof strategies and can reproduce them.
Skills	• Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. • Students are able to discover and verify further logical connections between the concepts studied in the course. • For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.
Personal Competence	
Social Competence	• Students are able to work together in teams. They are capable to use mathematics as a common language. • In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.
Autonomy	• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. • Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.
Workload in Hours	Independent Study Time 128, Study Time in Lecture 112
Credit points	8
Examination	Written exam
Examination duration and scale	60 min (Analysis I) + 60 min (Linear Algebra I)

Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students will be able • to differentiate between production logistics and logistics services, • to describe internal and external areas of production and logistics management, • understand the difference between the different roles in a supply chain, • to describe and explain the actual challenges of production and Logistics management
Skills	Based on the acquired knowledge students are capable of • Analysing logistics problems and influence factors in companies, • Selecting appropriate methods for solving practical problems, • Applying methods and tools of logistics management for standardized problems.
Personal Competence	
Social Competence	Students can • actively participate in discussions and team sessions, • arrive at work results in groups and document them, • develop joint solutions in mixed teams and present them to others.
Autonomy	Students are able to - perform work steps for solving problems of business logistics independently with the aid of pointers - assess their own state of learning in specific terms and to define further work steps on this basis guided by teachers.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6

Examination duration and scale	120 min
Assignment for the Following Curricula	Logistics and Mobility: Core qualification: Compulsory

Course L1222: Introduction into Production Logistics	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dr. Ronald Heggmaier
Language	DE
Cycle	SoSe
Content	Production and logistics are mutually dependent. The traditional tasks of production logistics have been expanded in recent years. From being an assistant to production, production logistics has out grown to become a lever for improving the value chains. In addition, production logistics became the Achilles heel of modern factories. Failures can not be mitigated without effect on earnings and have an impact along the entire supply chain. The course "Introduction to Production Logistics" provides an insight into the past, present and future of production logistics of industrial plants. It provides students with the necessary mindset that is required for the logistics manager of today and tomorrow. Theoretical background will be enriched with examples and best practice guest lectures. The main objective of this course is to pass on knowledge about production logistics. After successful completion of this course the participants should be able to understand and solve theoretical and practical problems in the field of production logistics.

Module M1007: Bearing and Picking Technology

Courses

Title	Typ	Hrs/wk	CP
Bearing and Picking Technology (L1237)	Lecture	2	4
Bearing and Picking Technology (L1238)	Recitation Section (large)	1	2

Module Responsible	NN
Admission Requirements	none
Recommended Previous Knowledge	Introduction to logistics and mobility
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to... • state basic terms and definitions of bearing and picking technology • describe and distinguish different warehouse and storage systems • describe and distinguish picking systems • explain the relevance of warehouse, bearing and picking systems in the process of logistics
Skills	Students are able to... • analyze bearing and picking systems and chose fitting systems for certain requirements. • roughly dimension bearing and picking systems
Personal Competence	
Social Competence	Students can discuss and solve small tasks in groups.
Autonomy	--
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42

Module M0851: Mathematics II

Courses

Title	Typ	Hrs/wk	CP
Analysis II (L1025)	Lecture	2	2
Analysis II (L1026)	Recitation Section (large)	1	1
Analysis II (L1027)	Recitation Section (small)	1	1
Linear Algebra II (L0915)	Lecture	2	2
Linear Algebra II (L0916)	Recitation Section (small)	1	1
Linear Algebra II (L0917)	Recitation Section (large)	1	1

Module Responsible	Prof. Anusch Taraz
Admission Requirements	none
Recommended Previous Knowledge	Mathematics I
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	• Students can name further concepts in analysis and linear algebra. They are able to explain them using appropriate examples. • Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. • They know proof strategies and can reproduce them.
Skills	• Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. • Students are able to discover and verify further logical connections between the concepts studied in the course. • For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.
Personal Competence	
Social Competence	• Students are able to work together in teams. They are capable to use mathematics as a common language. • In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.
Autonomy	• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. • Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.
Workload in Hours	Independent Study Time 128, Study Time in Lecture 112
Credit points	8
Examination	Written exam
Examination duration and scale	60 min (Analysis II) + 60 min (Linear Algebra II)

Module M1261: Management

Courses

Title	Typ	Hrs/wk	CP
Finance and Accounting (L1707)	Lecture	2	3
Foundations of Management (L1706)	Lecture	2	3

Module Responsible	Prof. Thomas Wrona
Admission Requirements	none
Recommended Previous Knowledge	Basics of business studies
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students will accumulate extensive knowledge about different aspects of management after having participated in this module. • Students are able to give an overview of the activities of management and describe processes and content of management. • Students are able to identify the features and procedures by which a modern organization can be managed. • Students are able to explain and analyze relationships between management activities. • Students are able to describe and apply methods of finance and accounting.
Skills	Students are able to develop procedures and basic approaches in the context of investment and financing decisions for the company. • The students are able to recognize and evaluate important skills for management. • The students are able to develop their own understanding of successful leadership in organizations and evaluate strategies accordingly. • The Students are able to differentiate between different environmental contingencies and asses the underlying risk potentials. Students are able to utilize models and methods of accounting and apply it from a business perspective.
Personal Competence	
Social Competence	After attending the module students will be able to • lead and take part in strategy-related discussions • present results, both in written and verbal form work respectful with others in a team.
Autonomy	The students are able to gather, analyze, and critically reflect on information and data and convert it into manageable summaries.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0608: Basics of Electrical Engineering

Courses

Title	Typ	Hrs/wk	CP
Basics of Electrical Engineering (L0290)	Lecture	3	4
Basics of Electrical Engineering (L0292)	Recitation Section (small)	2	2

Module Responsible	Prof. Günter Ackermann
Admission Requirements	none
Recommended Previous Knowledge	Basics of mathematics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students can to draw and explain circuit diagrams for electric and electronic circuits with a small number of components. They can describe the basic function of electric and electronic componentes and can present the corresponding equations. They can demonstrate the use of the standard methods for calculations.
Skills	Students are able to analyse electric and electronic circuits with few components and to calculate selected quantities in the circuits. They apply the ususal methods of the electrical engineering for this.
Personal Competence	
Social Competence	none
Autonomy	Students are able independently to analyse electric and electronic circuits and to calculate selected quantities in the circuits.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	135 Minuten
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory Logistics and Mobility: Core qualification: Compulsory Mechanical Engineering: Core qualification: Compulsory Naval Architecture: Core qualification: Compulsory Process Engineering: Core qualification: Compulsory

Module M0887: Transportation Planning and Traffic Engineering

Courses

Title	Typ	Hrs/wk	CP
Transport Planning and Traffic Engineering (L0997)	Problem-based Learning	4	6

Module Responsible	Prof. Carsten Gertz
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to • understand the facts, contexts and objectives of transport planning. • correctly apply definitions and concepts of transport planning. • reproduce basic concepts of transport modelling. • explain the fundamentals of traffic engineering and transport infrastructure construction.
Skills	Students are able to • analyse transport supply based on key metrics. • estimate transport demand using key metrics. • design transport networks, links and junctions. • calculate traffic signal plans. • assess transport concepts.
Personal Competence	
Social Competence	Students are able to • get together in groups and constructively discuss and analyse set problems. • in a group agree on solutions and document them.
Autonomy	Students are able to • produce reports on group work. • structure the tasks and timing for working out a set problem.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Project
Examination duration and scale	
Assignment for the Following Curricula	Civil- and Environmental Engineering: Core qualification: Compulsory Logistics and Mobility: Core qualification: Compulsory

Course L0997: Transport Planning and Traffic Engineering	
Typ	Problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Carsten Gertz

Module M0974: Business Simulation Marktstrat

Courses

Title	Typ	Hrs/wk	CP
Business Simulation Marktstrat (L0918)	Seminar	4	6

Module Responsible	Prof. Christian Lüthje
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to… • recognize and analyze relationships and interdependencies between different decision areas in business administration • acquire problem-related terms, theories and methods of business administration and relate these to practical situations in businesses
Skills	Students are able to… • make well-founded decisions in realistic coroporate settings by drawing on the business administration knowledge • consider in parallel and balance several relevant factors when making business-related decisions (e.g. financial situation, behavior of competitors, market demand, production capacities) • critically analyze business decisions in hindsight and deduce consequences for future decisions from this analysis • analyze and explain phenomena from daily business by drawing on business administration theories and methods
Personal Competence	
Social Competence	Students are able to… • form stable work groups with fellow students, even those, who were previously unknown, and agree on work habits • arrive at a consensus as a team when making management decisions and, if necessary, to solve conflicts along the way to achieving the consensus • adequately present the situation of a (fictitious) company and their decision making to teachers and fellow students
Autonomy	Students are able to… • make and justify decisions in (fictitious) professional situations • to reflect their own actions in hindsight and arrive at suggestions for improvements in a structured way • critically depict and reflect situations in a structured way, both, orally as well as in writing • perform transfers from theory into practice
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written elaboration
Examination duration and scale	different achievements (single/team) - learning diary, presentations, reflections
Assignment for the Following Curricula	Logistics and Mobility: Core qualification: Elective Compulsory

Cycle	WiSe
Content	The business simulation game Markstrat B2B - Markstrat is a business simulation which puts you into the role of managing the marketing division of the electro-mechanical business unit of a large corporation. Competing with several other companies, you try to successfully market two products to business customers. To this end, you and other students jointly develop and implement a long-term marketing strategy for your business unit. During the 10 rounds of the simulation game, the students and the randomly assigned student team make decisions in the areas of product development, advertising, sales, price, production, and human resources on a weekly basis. To make well-informed decisions, the student teams can draw on a large number of information sources such as customer surveys, experiments, market studies, and benchmarks which you need to analyze during each round of the simulation. The simulation is accompanied by a comprehensive introduction, a concomitant coaching, as well as a mid-term and final presentation. In addition, the student teams will prepare a written report.

Module M0987: Legal Foundations of Transportation and Logistics

Courses

Title	Typ	Hrs/wk	CP
Legal Foundations of Transportation and Logistics (L1186)	Lecture	2	2
Legal Foundations of Transportation and Logistics (L1187)	Recitation Section (large)	1	2

Module Responsible	Prof. Heike Flämig
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to... • describe the systematics of transport law and logistics law • explain the legal connections in transport and logistics
Skills	Students can... • analyze and solve questions of law for transport and logistics • discuss and systematically evaluate law cases and verify them with applicable laws
Personal Competence	
Social Competence	Students can come to results in groups and document them.
Autonomy	Students can... • develop systematical thinking • search and analyze laws independently • answer questions of law concerning transport and logistics independently
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42

Title	Typ	Hrs/wk	CP
Transport- and Handling-Technology (L0715)	Lecture	2	3
Transport- and Handling-Technology (L0718)	Recitation Section (small)	2	3

Module Responsible	Prof. Carlos Jahn
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able… - to describe and discuss transportation and transshipment technology concepts laid down in directives and standards (such as distinguishing between means of transporta-tion and means of con-veyance or loading unit and means of carriage). - to determine, compare, select, and allocate suitable technologies based on the questions: (1) What is to be transported? (e.g. goods or loading units) (2) How is it to be transported? (e.g. by truck, rail, inland waterways, sea or air) (3) Where is it to be transshipped? (e.g. cargo center, rail trans-shipment terminal, seaport, airport) (4) How is it to be transshipped? (e.g. by crane or forklift truck).
Skills	Students can… - access relevant direc-tives and standards and apply them to the use case (such as unloading technology in bulk cargo shipment by rail), - differentiate between and evaluate transportation and transshipment technologies (such as by means of individual CO_2 balance sheets or shipping duration and costs).
Personal Competence	
Social Competence	Students are capable of… - discussing and organizing extensive research tasks in small groups formed at short notice during lectures and tutorials and as part of an extensive written work in the course of the semester, - jointly describing, differentiating between and evaluating problems (such as a joint write-up of factual knowledge about slow steaming in container shipping).
Autonomy	Students are able… - to research and select specialized literature, especially standards, guidelines/directives, - to submit on time contributions of their own to an extensive written elaboration in small groups and to present it jointly within a specified period, - to prepare for an excursion and behave appropriately in dialog with practice partners.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Carlos Jahn
Language	DE
Cycle	WiSe
Content	The lecture aims to provide skills of basics, potential application areas and advisability of different transport and handling techniques. At the end of the lecture, the students are capable of electing suitable techniques for evaluation and dimensioning of certain transport and handling problems. evaluating and dimensioning. In addition to freights and loading units, the different means of transport, transhipment terminals and the necessary equipment loom large. Furthermore, they get a basic knowledge about directives and norms on this subject. Besides the traffic routes road; rail, waterways (inland and sea waterways) and air; the combined transport is also discussed.

Module M1082: Mathematics III - Differential Equations I

Courses

Title	Typ	Hrs/wk	CP
Differential Equations 1 (Ordinary Differential Equations) (L1031)	Lecture	2	2
Differential Equations 1 (Ordinary Differential Equations) (L1032)	Recitation Section (small)	1	1
Differential Equations 1 (Ordinary Differential Equations) (L1033)	Recitation Section (large)	1	1

Module Responsible	Dozenten des Fachbereiches Mathematik der UHH
Admission Requirements	none
Recommended Previous Knowledge	Mathematics I and II
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	• Students can name the basic concepts in Mathematics III. They are able to explain them using appropriate examples. • Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples • They know proof strategies and can reproduce them.
Skills	• Students can model problems in Mathematics III with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods • Students are able to discover and verify further logical connections between the concepts studied in the course. • For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.
Personal Competence	
Social Competence	• Students are able to work together in teams. They are capable to use mathematics as a common language. • In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.
Autonomy	• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. • Students have developed sufficient persistence to be able to work for longer periods in a goad-oriented manner on hard problems.

Module M0622: Business Administration and Enterprise Resource Planning: CERMEDES AG

Courses

Title	Typ	Hrs/wk	CP
Business Administration and Enterprise Resource Planning: CERMEDES AG (L0330)	Seminar	2	3
Business Administration and Enterprise Resource Planning: CERMEDES AG (L1785)	Lecture	2	3

Module Responsible	Prof. Christian Ringle
Admission Requirements	None, but limited number of students: 20
Recommended Previous Knowledge	Basic knowledge in business administration
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students are able to… • describe complex and interrelated business processes along the supply chain • name rules and processes for the implementation of business processes in SAP • present important aspects of the process and project management of Enterprise Resource Planning-(ERP)-Software implementation • explain the functioning and use of ERP-Software along the supply chain • present the integrative role of ERP-Systems
Skills	The students are able to… • map the design of business processes along the supply chain of a firm • implement business processes in a ERP-Software (Customizing an SAP-System) • use ERP-Software in a daily routine • critically evaluate the ERP-Software along the theoretical requirements for optimally designing a business process
Personal Competence	
Social Competence	The students are able to… • direct fruitful and professional discussions • present and defend results of their work • communicate and collaborate successfully and respectfully with others in teams
Autonomy	The students will be able to acquire knowledge in a specific context independently and to map this knowledge onto other new complex problem fields.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written elaboration
Examination duration and scale	12 pages per student; 4 months
Assignment for the Following Curricula	Logistics and Mobility: Core qualification: Elective Compulsory

Course L0330: Business Administration and Enterprise Resource Planning: CERMEDES AG	
Typ	Seminar
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Christian Ringle
Language	DE
Cycle	WiSe
Content	The course involves three parts: During the first part of the course, participants are provided with insights into the market for ERP-Software and are provided with knowledge on how ERP-implementation projects proceed and how these projects should ideally be managed from a theoretical and practical perspective. In addition, participants are provided with an understanding of business functions and processes by means of visiting the TUHH model factory: In the model factory, participants are producing gearboxes and are solving special business cases on the basis of group-specific tasks. Finally, participants are introduced into the basic functioning of ERP-Software referring to the most common system (SAP). Participants gain a basic understanding of implementing organizational data, master data and processes into the system. The second part of the course involves working on a seminar thesis which takes place parallel to the first rather lecture-type sessions. Participants are in teams invited to design a theoretical concept for the functioning of certain business units within the firm (e.g. procurement, production, sales and distribution). Their concept should then be incorporated into both, a seminar thesis to be handed in and a first short presentation to be held in the seminar in the middle of the semester. During the third part of the course, participants implement their theoretical concept into the ERP-System, i.e. they customize the SAP system according to the theoretical requirements defined. In the context of this process, the participants are encouraged to critically evaluate the software options in light of a theoretically ideal design of business functions and processes. This third part of the course is designed in the form of mini-presentations by each team of participants giving an overview of the progress and critical evaluations made in implementing the theoretical concept into the system.
Literature	**Participants will be provided with a course handout in the form of ppt.-slides which can be downloaded in advance. Further literature references regarding the theoretical concepts are not provided (as this is part of the challenge in writing the thesis); literature references with regard to the ERP-System used are as follows (in alphabetical order):** • Agrawal, A. (2009): Customizing Materials Management Processes in SAP ERP Operatons, Galileo Press: Boston. • Arif, N./Tauseef, S. (2011): Integrating SAP ERP Financials, Galileo Press: Boston. • Chudy, M./Castedo, L. (2010): Sales and Distribution in SAP ERP - Practical Guide, Galileo Press: Boston. • Dickersback, J. T./Keller, G. (2011): Production Planning and Control with SAP ERP, Galileo Press: Boston. • Franz, M. (2010): Project Management with SAP Project System, Galileo Press: Boston. • Hoppe, M./Gulyassy, F. (2009): Materials Planning with SAP, Galileo Press: Boston. • Veeriah, N. (2011): Customizing Financial Accounting in SAP, Galileo Press: Boston. • Veeriah, N. (2012): Financial Accounting in SAP, Galileo Press: Boston.

Module M0594: Fundamentals of Mechanical Engineering Design

Courses

Title	Typ	Hrs/wk	CP
Fundamentals of Mechanical Engineering Design (L0258)	Lecture	2	3
Fundamentals of Mechanical Engineering Design (L0259)	Recitation Section (large)	2	3

Module Responsible	Prof. Dieter Krause
Admission Requirements	None
Recommended Previous Knowledge	• Basic knowledge about mechanics and production engineering • Internship (Stage I Practical)
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	After passing the module, students are able to: • explain basic working principles and functions of machine elements, • explain requirements, selection criteria, application scenarios and practical examples of basic machine elements, indicate the background of dimensioning calculations.
Skills	After passing the module, students are able to: • accomplish dimensioning calculations of covered machine elements, • transfer knowledge learned in the module to new requirements and tasks (problem solving skills), • recognize the content of technical drawings and schematic sketches, • technically evaluate basic designs.
Personal Competence	
Social Competence	• Students are able to discuss technical information in the lecture supported by activating methods.
Autonomy	• Students are able to independently deepen their acquired knowledge in exercises. • Students are able to acquire additional knowledge and to recapitulate poorly understood content e.g. by using the video recordings of the lectures.

Module M0831: Introduction to Quantitative Methods in Logistics

Courses

Title	Typ	Hrs/wk	CP
Introduction to Operations Research (L0884)	Lecture	2	2
Introduction to Statistics (L0883)	Lecture	2	2
Exercises to Introduction in Quantitative Methods in Logistics (L0885)	Recitation Section (small)	2	2

Module Responsible	Prof. Kathrin Fischer
Admission Requirements	None.
Recommended Previous Knowledge	Knowledge from Mathematics Lectures.
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students know • different methods from the field of descriptive statistics and can explain them and their importance for Logistics; • selected discrete and continuous distribution functions and can explain their meaning and their areas of application; • the laws of probability theory and can explain them; • different methods of inferential statistics - e.g. confidence intervals, hypothesis testing; • the history and relevance of Operations Research; • linear programming methods for solving planning problems; • selected methods of transportation and network optimization, e.g. methods for finding a shortest path; • models and methods for the travelling salesman and the vehicle routing problem; • appropriate software for solving these problems.
Skills	Students are able to • collect data by appropriate methods, to aggregate, classify and analyze the data and to illustrate their results; • recognize different distribution functions and to apply them in the solution of Logistics problems; • apply laws of probability to construct solutions for Business problems; • use appropriate methods of inferential statistics, apply them to Business problems and evaluate the results of their analysis; • construct appropriate quantitative - linear or integer - models for Business planning situations; • apply methods from linear programming and interpret the results; • apply methods from transport and network planning and interpretthe results; • solve TSPs and vehicle routing problems by heuristic methods; • carry out a sensitivity analysis and evaluate the results; • critically judge the different methods and their applicability; • apply appropriate software for solving the problems.
Personal Competence	
Social Competence	Students are able to • work successfully and respectfully in a team, derive group results and document them; • engage in scientific discussions on topics from the fields of Statistics and OR; • present the results of their work to others in an understandable way.
Autonomy	Students are able to • carry out data analyses for given tasks independently, individually or in a team; • solve complex Business planning problems independently or in a team, selecting and using appropriate software; • gather knowledge in the area independently and to apply their knowledge in problem solving; • critically reflect on the results of their work.

Module M0954: IT for Logistics

Courses

Title	Typ	Hrs/wk	CP
IT for Logistics (L0732)	Lecture	2	3
IT for Logistics (L0733)	Recitation Section (small)	2	3

Module Responsible	Prof. Dieter Gollmann
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students can • name the main security risks when using Information and Communication Systems, • describe commonly used methods for security data transfer in the web, • name the fundamental principles of data protection.
Skills	Students can • appreciate what needs to be taken into account when developing secure web applications, • assess the organisational measures that are required for successfully deploying security mechanisms, • apply the fundamental principles of data protection to concrete cases.
Personal Competence	
Social Competence	Students are capable of appreciating the impact of security problems on those affected and of the potential responsibilities for their resolution.
Autonomy	Students are capable of independently performing a problem analysis for given case studies and to defend their findings in a discussion.

Courses

Title	Typ	Hrs/wk	CP
Introduction to Transportation Economics (L1188)	Lecture	2	4
Introduction to Transportation Economics (L1189)	Recitation Section (large)	1	2

Module Responsible	Prof. Heike Flämig
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to... • explain basic connections between transport, traffic and logistics • explain the macroeconomic relevance of logistics • state the relevance of different modes of transport for the economy • describe the development and challenges of transport policy • explain trends and developments in transport industry
Skills	Based on their gained knowledge students can develop ideas for political decisions and design questions in the transport industry.
Personal Competence	
Social Competence	Students can discuss small tasks in groups and find solutions together.
Autonomy	Students are able to solve small tasks on their own with given literature.

Examination Form	Klausur
Examination duration and scale	
Lecturer	Dr. Ines Krebs-Zerdick
Language	DE
Cycle	SoSe
Content	Recommended Previous Knowledge: Modules BWL I and BWL II Contents: 1. Problem analysis, structuring and formulation 2. Planning analyses & Generating data 3. Solving problems: Analysis and decision • Decisions under singular and multiple objectives • Decisions under uncertainty and risk 4. Bounded rationality and psychological traps 5. Implementing decisions • Communication of analyses and decisions • Achieving sustainable impact of decisions • The influence of a company's culture, organization and management styles on decision making processes Learning Outcomes: The aim of this lecture is for the students to learn how to structure and model complex decision situations, and how to analyse and solve the resulting problems. Especially, they should be able to apply the knowledge they gain to practical decision situations from the field of business and management. In particular, after successful completion of this module, students should be able to • Analyse and structure decision situations • Apply structured methods for generating alternatives • Develop and analyse goals and systems of goals • Solve specific decision problems, as, e.g., problems with multiple objectives or probles under risk, by suitable methods • Take into account psychological traps and their effect on decision makers Moreover, students should be able to comment on the limitations of the different approaches and develop own ideas for solving complex problems. Students should be able to see decisions in the context of business realities and • make a judgement on the resources required for decision making and factor them into the choice of a suitable problem solving approach • treat implementation of decisions systematically as part of the problem solving process • understand how decision making processes in companies can be shaped and influence business success

Language	DE
Cycle	WiSe/SoSe
Content	Recommended Prior Knowledge / Requirements: Students are required to have their own copy of the "Bürgerliches Gesetzbuch (BGB)" for lectures and written exam Discussion Topics: Discussion of jurisdictions with different stages of appeal and members of the courts, mainly in the area of civil law; Difference between a statement of claim, default summon and writ of execution in adjective law; Different levels of legal capacity (full and restricted) as well the determination of criminal ability; Development of a contract and discussion of different types of contracts; Implications of challenges and representations in conclusions of a contracU Contract extensions, statutory limitations and the implications of an event of default. Learning targets: Introduction to "legal thinking" and gathering a basic understanding of the different stages of a court process. Key aspects of a contract, including representations, implications of defaults, extensions and statutory limitations. Required Reading: Supplemental materials will be provided during lectures (other than BGB copy above)
Literature	Begleitende Unterrichtsmaterialien werden verteilt. / Current bibliography will be given in lecture.

Course L1273: Global Innovation Management	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	90 min
Lecturer	Dr. Stephan Buse
Language	EN
Cycle	WiSe
Content	**General Aim:** The aim of this course is to demonstrate the challenges and opportunities offered by well differentiated innovation management within firms in view of the increasing globalisation of the world economy. **Specifiv (Learning) Obejectives:** • Why do managers have to think about “Global Innovation Management”? • What are the characteristics and drivers of globalisation and how do they affect firms’ innovation strategies? • What opportunities and risks do firms of different sizes face as a result of the increasing globalisation of the world economy? • What strategic and organisational challenges concerning innovation management do firms face if they are to be able to succeed internationally? • What can firms learn from globally successful innovators? • What role do (global) innovation networks play? How can firms of all sizes benefit from them **Syllabus:** • Differences between “Innovation Management” and “Global Innovation Management” - An Introduction • Drivers, Challenges and Chances of Globalisation • Knowledge Creation Around the Globe • Global Innovation Management in Firms • Strategies for Extending the Global Product and Target Market Portfolio

Course L0753: Entrepreneurship	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	2 midterm Klausuren (jeweils 15 Minuten) und eine Abschlussklausur (60 Minuten)
Lecturer	Prof. Christian Lüthje
Language	DE
Cycle	SoSe
Content	**General description of course content and course goals** The course aims at preparing students for a potential career as an entrepreneur. It starts with theoretical foundations of entrepreneurship and the impact of new ventures on innovation, technological progress and economic development. In the following sessions on business planning, students learn which strategic entrepreneurial decisions have to be made by entrepreneurs. They get to know how to develop and evaluate business ideas and business models, how to write a business plan, and how to obtain financing. Additionally, the course includes lessons about managing the new venture in the post-formation phase (especially on marketing and organizational development). The course content is based on recent results of entrepreneurship research, real-life examples, and also includes guest lectures from entrepreneurial practice. **Summarizing the most important contents** The course provides answers to the following fundamental questions of entrepreneurship theory and practice: • Which constituent elements define an entrepreneur? • Which specific personality traits and behaviors are attributed to entrepreneurs? • How can we describe and structure the new venture formation process? • What are critical success factors of entrepreneurs and what are potential barriers to success? • What are the latest developments of entrepreneurship in Germany, the economic meaning of new ventures, and the role of political and

	educational support and funding? • How can we develop and evaluate business ideas and business models? • Which strategic decisions have to be made by entrepreneurs in the business planning process (regarding law and taxation, market analysis, growth strategies, location, networks, and strategic partnerships)? • What makes a good business plan and how to obtain new venture financing? • How to manage the new venture in the post-formation phase (leadership, entrepreneurial team, marketing, and organizational development)? **Knowledge** Students can... • Understand what an entrepreneur is and which economic impact entrepreneurship has. • Define fundamental terms and explain important theories in entrepreneurship research. • Analyze key decisions in important areas of entrepreneurship and new venture management (e.g. financing, marketing, team formation). • Evaluate business ideas, business models, and business plans. • Make connections between different entrepreneurial areas of decision making in the pre- and post-foundation phase of a new venture and analyze potential reciprocal effects. **Skills** Students are capable of... • Simultaneously considering multiple factors and taking reasoned actions in entrepreneurial decision-making (Idea generation and evaluation, business planning, financing, law and taxation, market analysis, growth strategies, location, networks, and strategic partnerships). • Making well-grounded decisions regarding main functional business areas in realistic entrepreneurial situations (marketing, leadership, organization, entrepreneurial team, organizational development). **Social Competence** Students can... • Provide appropriate feedback and handle feedback on their own performance constructively. • Enter into a dialogue with formerly unknown fellow students, participate in discussions, and present well-grounded arguments. • Constructively interact with guest speakers and learn from their practical experiences. **Self-Reliance** Students are able to... • Evaluate consequences of a potential career as entrepreneur and state pros and cons of being an entrepreneur. • Specify own strengths and weaknesses with regard to general entrepreneurial tasks in the new venture process. • Justify and make decisions in entrepreneurial situations with the help from teachers as well as define tasks and acquire relevant knowledge.

Course L0652: Logistic Systems: Planning, Investment Decisions, Operating	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	60 Minuten
Lecturer	Dr. Jürgen W. Böse
Language	DE
Cycle	WiSe
Content	Based on the concept of a “system” as defined by systems theory and classical definition approaches for the term “logistics”, the lecture starts with important organizational and technical essentials of logistics systems in the field of cargo transport, handling and storage. To facilitate the understanding, examples from numerous existing business practices are presented and the associated advantages and disadvantages of related systems are discussed. In the following sessions, the lecture focuses on the systemic design of logistics solutions particularly highlighting planning aspects in the development phase and operations phase of logistics systems. For planning decisions regarding the type and number of system components or subsystems respectively technical details are of minor importance. In this regard, considerably more benefit is obtained from the knowledge about proven planning rules and methodological approaches. Among the quantitative methods used, against the background of system design on the above-mentioned level, analytical solutions are at the center of interest. With the aim of prioritizing and selecting design alternatives, evaluation methods are presented and critically discussed as well. The content of the lecture is especially devoted to the study of commonly used investment appraisal methods known from the field of business administration.

Course L0160: Corporate Strategies	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	60 Minuten
Lecturer	Prof. Thomas Wrona
Language	DE
Cycle	SoSe
Content	Introduction to the theory and practice of strategic management: The major will be on different types of corporate strategies of selected methods for the analysis of external and internal factors affecting the company and the strategic management process. The acquired knowledge is practically applied on the basis of selected case studies in the lectures to make students familiar with the use and application of different analysis techniques. A guest speaker complements the content of the lecture by providing a practical perspective on strategic management.

Module M0681: Project Course Logistics and Mobility

Courses

Title	Typ	Hrs/wk	CP

Module Responsible	Dozenten des Studiengangs
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students will receive in-depth knowledge and in-depth skills in a special area of business administration, engineering science, logistics or mobility and can reproduce this knowledge.
Skills	After the project work in a business, engineering related, logistics and or mobility related research field, students are able to... • familiarize themselves with a scientific and/or application-oriented problem • analyze the problem and find a solution (if appropriate as part of a team) • to refer to appropriate literature for the work on a problem as well as to critically evaluate publications • produce a scientifically sound written report on the problem in question (if appropriate as part of a team)
Personal Competence	
Social Competence	After the project work students are able to... • work respectfully in teams and to organize themselves in teams • analyse a problem in a team and to find a solution together • present and defend their project work to a sizable (expert) audience
Autonomy	After the project work students are able to... • familiarize themselves successfully with a demanding scientific or application oriented problem independently • prepare and deliver a presentation of their results independently
Workload in Hours	Independent Study Time 180, Study Time in Lecture 0
Credit points	6
Examination	Project (accord. to Subject Specific Regulations)
Examination duration and scale	
Assignment for the Following Curricula	Logistics and Mobility: Core qualification: Compulsory

Specialization Engineering Science

Students learn the basics of technical mechanics, electrical and construction engineering. By electing at least two electives according to their individual interests, students can deepen their knwoledge and skills in different areas of engineering science. The gained knowledge and skills enables Students to understand and design technological systems in the field of logistics and mobility.

Module M0575: Procedural Programming

Courses

Title	Typ	Hrs/wk	CP
Procedural Programming (L0197)	Lecture	1	2
Procedural Programming (L0201)	Recitation Section (large)	1	1
Procedural Programming (L0202)	Laboratory Course	2	3

Module Responsible	Prof. Siegfried Rump
Admission Requirements	None
Recommended Previous Knowledge	Elementary PC handling skills Elementary mathematical skills
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students acquire the following knowledge: • They know basic elements of the programming language C. They know the basic data types and know how to use them. • They have an understanding of elementary compiler tasks, of the preprocessor and programming environment and know how those interact. • They know how to bind programs and how to include external libraries to enhance software packages. • They know how to use header files and how to declare function interfaces to create larger programming projects. • The acquire some knowledge how the program interacts with the operating system. This allows them to develop programs interacting with the programming environment as well. • They learnt several possibilities how to model and implement frequently occurring standard algorithms.
Skills	• The students know how to judge the complexity of an algorithms and how to program algorithms efficiently. • The students are able to model and implement algorithms for a number of standard functionalities. Moreover, they are able to adapt a given API.
Personal Competence	
Social Competence	The students acquire the following skills: • They are able to work in small teams to solve given weekly tasks, to identify and analyze programming errors and to present their results. • They are able to explain simple phenomena to each other directly at the PC. • They are able to plan and to work out a project in small teams. • They communicate final results and present programs to their tutor.
Autonomy	• The students take individual examinations as well as a final written examn to prove their programming skills and ability to solve new tasks. • The students have many possibilities to check their abilities when solving several given programming exercises. • In order to solve the given tasks efficiently, the students have to split those appropriately within their group, where every student solves his or her part individually.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written exam
Examination duration and scale	90 minutes
Assignment for the Following Curricula	Computer Science: Core qualification: Compulsory Electrical Engineering: Core qualification: Compulsory Computational Science and Engineering: Core qualification: Compulsory Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory Mechatronics: Core qualification: Compulsory Technomathematics: Core qualification: Compulsory

Production Engineering II (L0610)	Lecture	2	2
Production Engineering II (L0611)	Recitation Section (large)	1	1

Module Responsible	Prof. Wolfgang Hintze
Admission Requirements	none
Recommended Previous Knowledge	no course assessments required internship recommended
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to ... • name basic criteria for the selection of manufacturing processes. • name the main groups of Manufacturing Technology. • name the application areas of different manufacturing processes. • name boundaries, advantages and disadvantages of the different manufacturing process. • describe elements, geometric properties and kinematic variables and requirements for tools, workpiece and process. • explain the essential models of manufacturing technology.
Skills	Students are able to... • select manufacturing processes in accordance with the requirements. • design manufacturing processes for simple tasks to meet the required tolerances of the component to be produced. • assess components in terms of their production-oriented construction.
Personal Competence	
Social Competence	Students are able to ... • develop solutions in a production environment with qualified personnel at technical level and represent decisions.
Autonomy	Students are able to .. • interpret independently the manufacturing process. • assess own strengths and weaknesses in general. • assess their learning progress and define gaps to be improved. • assess possible consequences of their actions.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Courses

Title	Typ	Hrs/wk	CP
Introduction to Control Systems (L0654)	Lecture	2	4
Introduction to Control Systems (L0655)	Recitation Section (small)	2	2

Module Responsible	Prof. Herbert Werner
Admission Requirements	none
Recommended Previous Knowledge	Representation of signals and systems in time and frequency domain, Laplace transform
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	• Students can represent dynamic system behavior in time and frequency domain, and can in particular explain properties of first and second order systems • They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency response and root locus • They can explain the Nyquist stability criterion and the stability margins derived from it. • They can explain the role of the phase margin in analysis and synthesis of control loops • They can explain the way a PID controller affects a control loop in terms of its frequency response • They can explain issues arising when controllers designed in continuous time domain are implemented digitally
Skills	• Students can transform models of linear dynamic systems from time to frequency domain and vice versa • They can simulate and assess the behavior of systems and control loops • They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules • They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques • They can calculate discrete-time approximations of controllers designed in continuous-time and use it for digital implementation • They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks
Personal Competence	
Social Competence	Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs
Autonomy	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems. They can assess their knowledge in weekly on-line tests and thereby control their learning progress.

Course L0654: Introduction to Control Systems	
Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	DE
Cycle	WiSe
Content	Signals and systems • Linear systems, differential equations and transfer functions • First and second order systems, poles and zeros, impulse and step response • Stability Feedback systems • Principle of feedback, open-loop versus closed-loop control • Reference tracking and disturbance rejection • Types of feedback, PID control • System type and steady-state error, error constants • Internal model principle Root locus techniques • Root locus plots • Root locus design of PID controllers Frequency response techniques • Bode diagram • Minimum and non-minimum phase systems • Nyquist plot, Nyquist stability criterion, phase and gain margin • Loop shaping, lead lag compensation • Frequency response interpretation of PID control Time delay systems • Root locus and frequency response of time delay systems • Smith predictor Digital control • Sampled-data systems, difference equations • Tustin approximation, digital implementation of PID controllers Software tools • Introduction to Matlab, Simulink, Control toolbox • Computer-based exercises throughout the course
Literature	• Werner, H., Lecture Notes „Introduction to Control Systems“ • G.F. Franklin, J.D. Powell and A. Emami-Naeini "Feedback Control of Dynamic Systems", Addison Wesley, Reading, MA, 2009 • K. Ogata "Modern Control Engineering", Fourth Edition, Prentice Hall, Upper Saddle River, NJ, 2010 • R.C. Dorf and R.H. Bishop, "Modern Control Systems", Addison Wesley, Reading, MA 2010

Module M0933: Fundamentals of Materials Science

Courses

Title	Typ	Hrs/wk	CP
Fundamentals of Materials Science I (L1085)	Lecture	2	2
Fundamentals of Materials Science II (Advanced Ceramic Materials, Polymers and Composites) (L0506)	Lecture	2	2
Physical and Chemical Basics of Materials Science (L1095)	Lecture	2	2

Module Responsible	Prof. Jörg Weißmüller
Admission Requirements	None
Recommended Previous Knowledge	Highschool-level physics, chemistry und mathematics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students have acquired a fundamental knowledge on metals, ceramics and polymers and can describe this knowledge comprehensively. Fundamental knowledge here means specifically the issues of atomic structure, microstructure, phase diagrams, phase transformations, corrosion and mechanical properties. The students know about the key aspects of characterization methods for materials and can identify relevant approaches for characterizing specific properties. They are able to trace materials phenomena back to the underlying physical and chemical laws of nature.
Skills	The students are able to trace materials phenomena back to the underlying physical and chemical laws of nature. Materials phenomena here refers to mechanical properties such as strength, ductility, and stiffness, chemical properties such as corrosion resistance, and to phase transformations such as solidification, precipitation, or melting. The students can explain the relation between processing conditions and the materials microstructure, and they can account for the impact of microstructure on the material's behavior.
Personal Competence	
Social Competence	-
Autonomy	-
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84
Credit points	6
Examination	Written exam
Examination duration and scale	180 min

Module M0553: Objectoriented Programming, Algorithms and Data Structures

Courses

Title	Typ	Hrs/wk	CP
Objectoriented Programming, Algorithms and Data Structures (L0131)	Lecture	4	4
Objectoriented Programming, Algorithms and Data Structures (L0132)	Recitation Section (small)	1	2

Module Responsible	Prof. Rolf-Rainer Grigat
Admission Requirements	None
Recommended Previous Knowledge	Lecture Prozedurale Programmierung or equivalent proficiency in imperative programming Mandatory prerequisite for this lecture is proficiency in imperative programming (C, Pascal, Fortran or similar). You should be familiar with simple data types (integer, double, char), arrays, if-then-else, for, while, procedure calls or function calls, pointers, and you should have used all those in your own programs and therefore should be proficient with editor, compiler, linker and debugger. In this lecture we will immediately start with the introduction of objects and we will not repeat the basics mentioned above. This remark is especially important for AIW, GES, LUM because those prerequisites are **not** part of the curriculum. They are prerequisites for the start of those curricula in general. The programs ET, CI and IIW include those prerequisites in the first semester in the lecture Prozedurale Programmierung. .
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students can explain the essentials of software design and the design of a class architecture with reference to existing class libraries and design patterns. Students can describe fundamental data structures of discrete mathematics and assess the complexity of important algorithms for sorting and searching.
Skills	Students are able to • Design software using given design patterns and applying class hierarchies and polymorphism • Carry out software development and tests using version management systems and Google Test • Sort and search for data efficiently • Assess the complexity of algorithms.
Personal Competence	
Social Competence	Students can work in teams and communicate in forums.
Autonomy	Students are able to solve programming tasks such as LZW data compression using SVN Repository and Google Test independently and over a period of two to three weeks.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam

Module M0610: Electrical Machines

Courses

Title	Typ	Hrs/wk	CP
Electrical Machines (L0293)	Lecture	3	4
Electrical Machines (L0294)	Recitation Section (large)	2	2

Module Responsible	Prof. Günter Ackermann
Admission Requirements	none
Recommended Previous Knowledge	Basics of mathematics, in particular complexe numbers, integrals, differentials Basics of electrical engineering and mechanical engineering
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students can to draw and explain the basic principles of electric and magnetic fields. They can describe the function of the standard types of electric machines and present the corresponding equations and characteristic curves. For typically used drives they can explain the major parameters of the energy efficiency of the whole system from the power grid to the driven engine.
Skills	Students arw able to calculate two-dimensional electric and magnetic fields in particular ferromagnetic circuits with air gap. For this they apply the usual methods of the design auf electric machines. They can calulate the operational performance of electric machines from their given characteristic data and selected quantities and characteristic curves. They apply the usual equivalent circuits and graphical methods.
Personal Competence	
Social Competence	none
Autonomy	Students are able independently to calculate electric and magnatic fields for applications. They are able to analyse independently the operational performance of electric machines from the charactersitic data and theycan calculate thereof selected quantities and characteristic curves.

Title	Typ	Hrs/wk	CP
Stochastics (L0777)	Lecture	2	4
Stochastics (L0778)	Recitation Section (small)	2	2

Module Responsible	Prof. Marko Lindner
Admission Requirements	none
Recommended Previous Knowledge	• Calculus • Discrete algebraic structures (combinatorics) • Propositional logic
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students can explain the main definitions of probability, and they can give basic definitions of modeling elements (random variables, events, dependence, independence assumptions) used in discrete and continuous settings (joint and marginal distributions, density functions). Students can describe characteristic notions such as expected values, variance, standard deviation, and moments. Students can define decision problems and explain algorithms for solving these problems (based on the chain rule or Bayesian networks). Algorithms, or estimators as they are caller, can be analyzed in terms of notions such as bias of an estimator, etc. Student can describe the main ideas of stochastic processes and explain algorithms for solving decision and computation problem for stochastic processes. Students can also explain basic statistical detection and estimation techniques.
Skills	Students can apply algorithms for solving decision problems, and they can justify whether approximation techniques are good enough in various application contexts, i.e., students can derive estimators and judge whether they are applicable or reliable.
Personal Competence	
Social Competence	
Autonomy

Module M0852: Graph Theory and Optimization

Courses

Title	Typ	Hrs/wk	CP
Graph Theory and Optimization (L1046)	Lecture	2	3
Graph Theory and Optimization (L1047)	Recitation Section (small)	2	3

Module Responsible	Prof. Anusch Taraz
Admission Requirements	none
Recommended Previous Knowledge	• Discrete Algebraic Structures • Mathematics I
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	• Students can name the basic concepts in Graph Theory and Optimization. They are able to explain them using appropriate examples. • Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. • They know proof strategies and can reproduce them.
Skills	• Students can model problems in Graph Theory and Optimization with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. • Students are able to discover and verify further logical connections between the concepts studied in the course. • For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.
Personal Competence	
Social Competence	• Students are able to work together in teams. They are capable to use mathematics as a common language. • In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.
Autonomy	• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. • Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.

Specialization Logistics and Mobility

Students gain Knowledge and skills in the important fields of logistics and mobility for their following professional carrier. First students learn the main basics in the field of logistics and mobility. Business related knowledge and methods for logistics and transport planning as well as specific knowledge of logistics technology and traffic engineering are tought. The project course and the individual choice of at least four electives enable students to specialize in selected field of logistics or mobility according to their interests.

Module M0983: Mobility Concepts

Courses

Title	Typ	Hrs/wk	CP
Mobility Research and Transportation Projects (L1181)	Problem-based Learning	3	3
Mobility in Megacities and Developing Countries (L1182)	Seminar	3	3

Module Responsible	Dr. Philine Gaffron
Admission Requirements	None
Recommended Previous Knowledge	Module Transportation Planning and Traffic Engineering
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to: • name the different urban transport systems existing around the world. • explain the transport challenges in Asian and African mega cities. • recognise and relate interactions between transport systems on the one hand and ecological, socio-cultural and economic problem areas on the other. • outline specific issues and problems in urban development and transport (in developing countries). • explain the effects of external framework factors (like energy costs) on transport.
Skills	Students are able to: • analyse and evaluate given case studies. • transfer learning results to other regions and cities. • analyse specific issues and problems in urban development and transport (in developing countries). • critically assess actors, planning objectives, planned measures and the implementation of transport projects in the light of the UN Millennium Development Goals • develop and present sustainable (i.e. ecological, poverty oriented, gender balanced and economical) solutions for urban personal and goods transport
Personal Competence	
Social Competence	Students are able to: • present and explain independently generated findings. • constructively discuss potentially controversial topics in a group context.
Autonomy	Students are able to: • carry out independent literature research and analysis. • independently author a written report on a given topic.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84
Credit points	6
Examination	Written elaboration
Examination duration and scale	1 x 30 min. presentation plus ca. 2500 words report; 1 x 10 min. presentation plus ca. 4000 words report
Assignment for the Following Curricula	Logistics and Mobility: Specialisation Logistics and Mobility: Elective Compulsory

Course L1181: Mobility Research and Transportation Projects	
Typ	Problem-based Learning
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Dr. Philine Gaffron
Language	DE
Cycle	SoSe
Content	This course places its focus on transport and mobility in Germany. It deals with questions such as: • Which external factors – like e.g. energy costs, availability of renewable and fossil fuels, environmental and climate protection objectives – influence current developments in the transport sector? • Which external effects in turn are caused by mobility choices and traffic? • How should these interactions be evaluated? • How and by whom can they be influenced? During the course, these questions will be illustrated and discussed with reference to different examples and current developments. Participants will also provide input on specific topics. Potential core subjects of the course could be: • Transport and Energy: the effects of higher energy costs in the transport sector and the adaptive options of households and businesses • Environmental Justice : which population groups are disproportionately affected by transport emissions and who causes them? • Transport and Climate Protection: can, want, act – everything could be, nothing has to?
Literature	Die Literaturempfehlungen sind abhängig von den jeweiligen, wechselnden Themenschwerpunkten und werden rechtzeitig vor Beginn der Veranstaltung bekannt gegeben.

Course L1182: Mobility in Megacities and Developing Countries	
Typ	Seminar
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Dr. Jürgen Perschon, Christof Hertel
Language	DE
Cycle	SoSe
Content	The course provides and overview over different transport projects in the metropolitan areas of developing countries. Considering different perspectives on urban growth, social justice, economic development, environmental and climate protection as well as the economic viability of public transport, the specific situation in the urban conglomerates of Asia, Latin America and Africa will be analysed and placed in a regional and global context. Specific public transport systems will be examined to establish, whether they are a suitable example for sustainable urban development. The following examples could be suitable case studies: Singapore (Metro), Lagos (BRT Light), Guanghzou, Bogota, Jakarta (Full BRT), Sao Paulo, Medellin (Cable Car Systems), Johannesburg (Minibus-Taxi). The course will be designed interactively with the students and will partly be in English as is the majority of the literature in this area (also: Skype online interviews with international experts in the transport sector).

Module M1014: Logistics Service Provider Management

Courses

Title	Typ	Hrs/wk	CP
Logistics Service Provider Management (L1240)	Lecture	2	4
Logistics Service Provider Management (L1241)	Recitation Section (large)	1	2

Module Responsible	Prof. Heike Flämig
Admission Requirements	none
Recommended Previous Knowledge	• Introduction to Logistics and Mobility • Transport and cross-docking Technology • Logistics Management
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to... • integrate LSPs into the concept of business logistics • tell the specifics of business services and logistics Services and their derived characteristics • describe logistics functions as LSP service packages • explain, why companies outsource logistics Services and what are actual trends in Business • describe basic outsorucing processes and tender management success factors • describe and analyze intra- and intermodal transport institutions as well as tasks, challenges and opportunities for the Management of LSPs
Skills	Students can... • support the sub-segment specific business functions and management Tasks (e.g. for Road Transport, Airlines, SeaPort Providers etc.) • categorize LSPs regarding strategic product-market-positioning • derive action plans regarding management tasks depending on contigencies
Personal Competence	
Social Competence	Students can... • discuss case studies in Groups (within and outside of the classroom), reaching a common understanding and result • prepare and deliver Business presentations • give and discuss Feedbacks in the large group
Autonomy	Students can... • produce written reports independently
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42
Credit points	6
Examination	Written elaboration
Examination duration and scale	60 minutes
Assignment for the Following Curricula	Logistics and Mobility: Specialisation Logistics and Mobility: Elective Compulsory

Course L1240: Logistics Service Provider Management	
Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Dr. Stephan Freichel
Language	DE
Cycle	SoSe
Content	**1 Concept and Functions** Define the role of logistics services providers in the overall concept and functions of logistics services providers. Workshop on the role of logistics services providers in the economy, based on up-to-date topics in the field and in the news. **2 Outsourcing and Cooperation** Make or buy, forms and management of inter-organizational relations **3 Institutions** Special business management features of carriers, haulage contractors, CEP services **4 Trends, Strategies and Management Functions** Market trends, requirements, basic business management and management functions (operations, business development, HR, IT, finance/planning and control, organization, leadership) **5 Strategic Developments and Case Studies** Selected aspects (e.g. risk and innovation management, global and regional networking, greenwashing and sustainability) Examples: Case Study A) Types of company (such as haulage contractors, railway operators, road transport companies, heavy goods, textile and refrigerated goods specialists, CEPs, etc) will be introduced and discussed in the context of a presentation. Case Study B) Individual companies will be analyzed on the basis of accessible material such as company reports, websites and possibly telephone interviews and case studies will be explained and discussed with regard to the functions of the logistics services provider and the management task of the corporate managements of the selected cases.

Module M1112: Production Logistics

Courses

Title	Typ	Hrs/wk	CP
Production Logistics Seminar (L1253)	Seminar	2	6

Module Responsible	Prof. Thorsten Blecker
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Knowledge: Students will have acquired knowledge in the following areas: • interaction of production and logistics and interdependencies • production-related logistics topics
Skills	Skills: Students will based on the acquired knowledge be in a position to • assess issues on production logistics • to be able to deal critically with developments in production logistics and assess these critically; • to work independently on current topics from the field of "production logistics";
Personal Competence	
Social Competence	Social competence: After completing the module students are capable of • to conduct subject-specific and interdisciplinary discussions; • present orally and in writing their results; • respectful team work
Autonomy	After completing the module students are capable to work independently on a subject and transfer the acquired knowledge to new problems.
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28
Credit points	6
Examination	Written elaboration
Examination duration and scale	approx. 20 pages plus presentation (20 minutes per person)
Assignment for the Following Curricula	Logistics and Mobility: Specialisation Logistics and Mobility: Elective Compulsory

Course L1253: Production Logistics Seminar

Typ	Seminar
Hrs/wk	2
CP	6
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28
Lecturer	Prof. Thorsten Blecker
Language	DE
Cycle	WiSe
Content	Within the Production Logistics Seminar the students shall compose a first term paper. In the beginning production-close logstic topics will be distributed which the students have to elaborate on their own. This workshop aims at the better motivation of the students to structure new and creative ideas and develop them to innovative solutions. This workshop contains regular meetings as well as two presentations in the middle and at the end.
Literature	Skripte und Textdokumente, die während der Vorlesung herausgegeben werden.

Module M1070: Simulation of Transport and Handling Systems

Courses

Title	Typ	Hrs/wk	CP
Simulation of Transport and Handling Systems (L1352)	Lecture	1	2
Simulation of Transport and Handling Systems (L1818)	Recitation Section (small)	3	4

Module Responsible	Prof. Carlos Jahn
Admission Requirements	none
Recommended Previous Knowledge	Must have attended (and passed) the lecture on Transport- and Handling-Technology
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students can… • Explain the structure and workings of standard external logistics systems. • Outline the benefits of using simulation software subject to the starting situation. • Present different simulation programs and kinds of simulation that are in widespread use and explain their characteristics.
Skills	Students are able to… • Recognize, analyze, and assemble into a model the elementary building blocks of a logistics system. • Map complex external logistics process using the *Plant Simulation*® simulation software. • Draw inferences from the results of the simulation, transfer them to the reality, and deduce action recommendations from them.
Personal Competence	
Social Competence	Students are capable of… • Solving complex tasks in a team and to document assignments accordingly. • Playing different roles in the teamwork and giving each other appropriate feedback in the team. • Presenting the relevant results of their project to specialists and representing them.
Autonomy	Students are able… • To acquaint themselves independently with software with which they are not familiar and to use it to solve complex tasks. • To define work steps independently and to acquire the knowledge required to do so.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written elaboration
Examination duration and scale	Simulation study and report with approximately 15 pages per person
Assignment for the Following Curricula	Logistics and Mobility: Specialisation Logistics and Mobility: Elective Compulsory

Course L1352: Simulation of Transport and Handling Systems	
Typ	Lecture
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Carlos Jahn
Language	DE
Cycle	WiSe
Content	The lecture deals with the simulation of external logistics systems. The focus is thus on logistics processes between companies or in transshipment systems such as ports or individual terminals. In the first part of the lecture students are taught the basics of external logistics systems and the benefits of using simulations to depict them. An overview of existing kinds of simulation and simulation programs is then given, followed by examples of existing simulation models of logistics systems in research and practice. A number of simulation models are demonstrated. In the second part of the lecture students learn independently how to handle the simulation software *Enterprise Dynamics*® in principle. They are first shown in theory how it functions in general terms. They then acquire the knowledge required with the aid of a tutorial and five short tasks that are to be solved individually. They can work on these tasks both during the supervised lecture times and at other times. In the third part of the lecture this knowledge they have acquired is applied in a group assignment. The students are divided into groups that then each have to work on solving a problem that is relevant to the field of (external) logistics systems by means of simulation. Students are given a specified period of time in which to work on their assignment. Over this period someone will always be available to deal with queries and suggestions during the lecture times. The results of the group assignment are to be documented in a simulation report that is to be submitted once the assignment period is over. Finally, the individual groups will outline in a presentation the problems on which they have worked and their findings.

Module M1290: Simulation of intra logistics

Courses

Title	Typ	Hrs/wk	CP
Simulation of intra logistics (L1755)	Seminar	4	6

Module Responsible	Dr. Johannes Hinckeldeyn
Admission Requirements	None
Recommended Previous Knowledge	Successful completion of the module „Technical Logistics“
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students will acquire the following knowledge: 1. The students are able to explain the significance, the structure and the components of an event- and object-oriented simulation model in intralogistics. 2. The students are able to reflect and explain the process of creating and programming an event- and object-oriented simulation model in intralogistics. 3. The students are able to view critically the strengths and weaknesses of event- and object-oriented simulation model.
Skills	The students will acquire the following skills: 1. The students will be able to derive the necessary parameters for the development of an event- and object-oriented simulation model in intralogistics from an existing logistics system. 2. The students will be able to program and run Plant Simulation simulation models independently. 3. The students can evaluate and interpret the results from a simulation model.
Personal Competence	
Social Competence	The students will acquire the following social skills: 1. The students are able to develop a complex simulation model in a team. 2. The students know the different roles in joint development of a simulation model and can give feedback to their respective roles. 3. The students are able to process the simulation results and present them in front of a audience.
Autonomy	The students will acquire the following independent competencies: 1. The students work independently in an initially unknown software (Plant Simulation). 2. The students are able to derive independently the necessary simulation parameters from information about a logistics system. 3. The students are able to develop and program an event- and object-oriented simulation models from given parameters.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written exam
Examination duration and scale	180 min
Assignment for the Following Curricula	Logistics and Mobility: Specialisation Logistics and Mobility: Elective Compulsory

Course L1755: Simulation of intra logistics

Typ	Seminar
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Dr. Johannes Hinckeldeyn
Language	DE
Cycle	WiSe/SoSe
Content	The seminar provides an introduction to the development and programming of event and object-oriented simulation models based on the Plant Simulation software. The simulation models are focused on issues and problems in the field of intralogistics. The seminar will be conducted as a combination of theoretical content and autonomously solving simulation tasks on the computer. The students learn the ideal development workflow, programming and evaluation of a simulation model. Furthermore, the student will become familiar with the standard objects of a simulation model in Plant Simulation and their properties and functions. These standard objects will be used, if necessary with the assistance of the instructor, to build simulation models and analyze and evaluate the results. Furthermore, an introduction to the individual programming of simulation models is given on the basis of Sim Talk language.

Module M1289: Logistical systems - Industry 4.0

Courses

Title	Typ	Hrs/wk	CP
Logistics systems - Industry 4.0 (L1753)	Lecture	2	4
Logistics systems - Industry 4.0 (L1754)	Recitation Section (large)	1	2

Module Responsible	Prof. Jochen Kreutzfeldt
Admission Requirements	None
Recommended Previous Knowledge	Successful completion of the module „Technical Logistics“
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students will acquire the following knowledge: 1. The students are able to understand and explain the concept "Logistical System". 2. The students are able to describe and analyze logistical systems. 3. Students are able to explain and critically evaluate application cases and business models of the Industry 4.0 idea in the context of logistical systems.
Skills	The students will acquire the following skills: 1. The students are able to identify logistical systems, analyze and identify potential for change and improvement. 2. The students know different technical solutions to address problems in logistical systems. 3. The students are capable of deploying technical solutions and ideas from the concept Industry 4.0 to deal with logistical problems.
Personal Competence	
Social Competence	The students will acquire the following social skills: 1. The students are able to develop technical solutions for logistical systems and reflect their contribution within the team. 2. The technical solutions from the group can be jointly documented and presented. 3. Students are able to present their technological solutions to an audience and derived from the critique new ideas and improvements.
Autonomy	The students will acquire the following independent competencies: 1. The students can independently develop technical solutions for logistical problems under supervision. 2. The students are able to evaluate their technical solutions and discuss the pros and cons. 3. The students are able to assess the impact of the concept Industry 4.0 on their own career development.

Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Jochen Kreutzfeldt
Language	DE
Cycle	WiSe
Content	The lecture gives an introduction to the concept of logistical systems with a special emphasis on the subject of Industry 4.0. Here, the system concept in logistics from a technical point of view is introduced. A logistical system is understood as a combination of transport, storage and change processes between source and sink of goods. This lecture will look at the technical aspect of these processes. Industry is a topic of this lecture. Industry 4.0 is understood as the far-reaching digitization and networking of logistical systems and the connection of logistical objects, processes and systems. The logistics industry expects Industry 4.0 to be a profound change and the realization of large improvement potentials. The lecture provides an in-depth introduction to application cases and business models of Industry 4.0 in logistics from a technical standpoint. A possible framework for Industry 4.0 is presented and several application examples are shown. In the exercises, students learn will learn the exemplary use of different technical solutions and know how, which can be used to improve logistical systems.

Courses

Title	Typ	Hrs/wk	CP
Fundamentals of Aircraft Systems (L0741)	Lecture	2	2
Fundamentals of Aircraft Systems (L0742)	Recitation Section (small)	1	1
Air Transportation Systems (L0591)	Lecture	2	2
Air Transportation Systems (L0816)	Recitation Section (large)	1	1

Module Responsible	Prof. Frank Thielecke
Admission Requirements	none
Recommended Previous Knowledge	Basics of mathematics, mechanics and thermodynamics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students get a basic understanding of the structure and design of an aircraft, as well as an overview of the systems inside an aircraft. In addition, a basic knowledge of the relationchips, the key parameters, roles and ways of working in different subsystems in the air transport is acquired.
Skills	Due to the learned cross-system thinking students can gain a deeper understanding of different system concepts and their technical system implementation. In addition, they can apply the learned methods for the design and assessment of subsystems of the air transportation system in the context of the overall system.
Personal Competence	
Social Competence	Students are made aware of interdisciplinary communication in groups.
Autonomy	Students are able to independently analyze different system concepts and their technical implementation as well as to think system oriented.

Courses

Title	Typ	Hrs/wk	CP
Environmental Management and Corporate Responsibilty (L1160)	Seminar	2	2
Transport Logistics (L0009)	Problem-based Learning	2	4

Module Responsible	Prof. Heike Flämig
Admission Requirements	none
Recommended Previous Knowledge	• Introduction to logistics and mobility • Foundations of Management
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students are able to... • explain basic terms of transport logistics, commercial traffic, transport policy and sustainability • describe actors, system boundaries and problems, challenges and goals of transport logistics • explain advantages and disadvantages of different transport chains • reflect standards of sustainability management
Skills	Students are able to... • design logistics systems independently • differentiate sustainability, CR, CSR and environmental management • critically evaluate measures for sustainable logistics and develop them
Personal Competence	
Social Competence	Students can... • creatively develop solutions in teams and work out presentations • present their knowledge and skills to other students
Autonomy	Students can... • carry out small research studies independently • apply theoretical knowledge in practical projects • apply presentation techniques such as free speech, designing charts (i.e. in Power-Point), use of media (Flip-Charts, Whiteboard, Metaplan)
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written elaboration
Examination duration and scale	Written assignment and short presentation

Module M-001: Bachelor Thesis

Courses

Title	Typ	Hrs/wk	CP

Module Responsible	Professoren der TUHH
Admission Requirements	• According to General Regulations §24 (1): At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	• The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods). • On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise. • The students are able to outline the state of research on a selected issue in their subject area.
Skills	• The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems. • With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions. • The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	• Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way. • The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
Autonomy	• The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame. • The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem. • The students can apply the essential techniques of scientific work to research of their own.
